TELEPHONE. Pittsville, Md. 301/835-2101 day or night.

BUSINESS HOURS. We are open from 7:30 a.m. to 4:00 p.m. Monday through Friday, except during the spring digging season when we are open from 7:00 a.m. to 5:30 p.m. Orders already dug may be picked up Saturday morning. Also open on Saturday by appointment. Not open on Sunday.

ORDER IN ADVANCE. To be sure of getting your plants at the desired time, please place your order well in advance.

ZIP. When ordering, please give us your ZIP code No.

PRICES. Prices quoted here cancel all previous lists and are subject to change without notice. These prices apply only to nurserymen, florists, and dealers. To assist us in limiting wholesale prices to members of the trade, we request that you place your order on business letterhead stationery. Prices here are f.o.b. this nursery.

TERMS. Net, no discount or net 30 days from date of shipment to those who have established credit. **THOSE WHO HAVE NOT ESTABLISHED CREDIT, PLEASE REMIT WITH ORDER.**

PACKING AND SHIPPING. When plants are shipped, the customer pays packing and shipping at cost. In ordering, please add 10 percent of the cost of the plants to cover packing and shipping. If the actual cost differs from that 10 percent, we will refund or bill you accordingly.

MAXIMUM SHIPPING SIZE. Due to the costs of packing and shipping, we do not ordinarily ship plants that are more than 6 feet tall. If the customer specifically authorizes it, we will in appropriate cases, prune a large plant back to proper shipping size.

CLAIMS AND GUARANTEE. Claims for shortages, errors, or any cause, must be made within 5 days after receipt of shipment. In no case are we liable for more than the invoice price of the plants. We guarantee to ship good, healthy stock but we do not assume any risk or responsibility for transportation, growth, or life of the plants after they leave this nursery. If your plants are damaged or excessively delayed in transit, please file a claim against the carrier immediately.

TELL US HOW TO SHIP. We ship by parcel post, motor freight, railway express, United Parcel Service and bus (Trailways and Greyhound). If you desire shipment by UPS or bus, please give us your telephone number. We can arrange shipment by truck if the size of the order warrants paying for a full load. We cannot ship by railway freight.

PRICE SCHEDULE FOR BALLING AND BURLAPPING.

In case of those plants specifically listed B&B, the prices in this catalog include the cost of balling and burlapping. Others are shown at bare root prices. A general guide for the additional charge of balling and burlapping follows:

Height of Plant	Charge
2½ to 3 ft.	\$1.00
3 to 4 ft.	1.50
4 to 5 ft.	2.00
5 to 6 ft.	3.00

These charges may vary depending upon the variety of plant involved.

PLANTS NOT LISTED HERE. We have many plants which are not listed in the catalog because they are too large to ship, or because we have them in too small quantity. The large ones, in many cases, would be of particular value to landscapers. We welcome your inquiry for materials to meet your specific needs.

TIME OF SHIPMENT. We can ship throughout the year except during extreme winter weather.

CONDITIONS OF SALE. All orders are accepted on the condition that they shall be void if our crops are damaged by conditions beyond our control.

PLAN TO VISIT OUR NURSERY. We welcome your visit and extend to you the invitation to see our plant material. We are on the Eastern Shore of Maryland, ten miles east of Salisbury.

EXPLANATION OF PLANT DESCRIPTION TERMS

Immediately following the names of many of our plants we have entered descriptive terms in abbreviated form. An explanation of those abbreviations follows:

- D = deciduous
- E = evergreen
- GC = ground cover
- S = shrub
- S/T = large shrub or small tree
- SE = semi evergreen
- trans = transplant
- Hence D T = deciduous tree
- S E S = semi-evergreen shrub
- B & B = balled and burlapped

Hardiness Data

The zone number, given in the description of many of our ornamental plants, refers to the zones depicted on U. S. Dept. of Agriculture Plant Hardiness Zone Map on page 7.

The zone number which we give is the northernmost zone in which we believe the plant to be hardy under average winter conditions. It should be noted that a plant's ability to survive the winter is not determined solely by the minimum temperature to which the plant is exposed but is also affected by the plant's general health, the soil moisture content, and the exposure to scalding sun and wind. Our assignment of a particular zone number to a plant should not be construed as a guarantee that the plant will survive in that zone. We can make no warranty, expressed or implied, as to the ability of any plant to survive after it has left this nursery.

GABLE'S HARDIER AZALEAS

Mr. Joseph B. Gable of Pennsylvania has spent almost a lifetime working with Azaleas and Rhododendrons. Many years ago he started breeding azaleas with the hopes of producing a hardier type of evergreen azalea in a good color range than then available. He has had wonderful success and is now recognized as the leader in the field.

These varieties will average hardier than Hinodegiri and Amoena and much hardier than the other Kurumes.

BACK ACRE AZALEAS

By Morrison

These azaleas are the first of the seedlings grown on personally, with a breeding program that is an extension of one phase of the original Glenn Dale work. They are not Glenn Dales, but are more closely related to the Satsuki group from Japan.

The breeding program centered on the production of double flowers that will be hardy for outside work, and in as wide a range of kinds that have white or nearly white centers and colored margins. The doubles are represented in this offering but only a few of those to come. The white

or light centered kinds are a mere sample of the range to be available shortly.

These kinds are from parents that are cold hardy in Washington, D.C. and plants have been tested safely in that area, in Memphis, Tenn., and in the general Atlanta area. In extremely cold winters there was some loss of flower buds.

The usual variation in degree of doubling may be expected on newly set plants, and the variations in light centers will vary considerably until the plants are old enough to have many, small, blooming shoots.

GLENN DALE AZALEAS

Since we began growing Glen Dale Azaleas, in 1941, they have become rather widely known and the demand for them has increased rapidly. Their ability to survive in areas where evergreen azaleas have been previously winter-killed has made them very popular.

Sometimes, when their flowers are described as striped or flaked, there will be scattered branches of solid colored flowers. Those branches should be cut out. This characteristic is inherent to the variety, not a fault of the nurseryman.

HEATHER

For convenience we have listed both the Callunas (Heathers) and the Ericas (Heaths) under one heading. Typically the Ericas bloom in the spring and the Callunas bloom in the fall. However, some varieties, particularly among the Callunas, are erratic. We have seen the Callunas bloom in June and then again in the fall. Calluna vulgaris Tib has bloomed in June, Oct., Nov., and Dec. at this nursery. Colors following variety name indicate the color of bloom. Ages indicate the age plant we have for sale.

ILEX (Holly)

We offer many varieties of holly, some common, some rare. To simplify printing, general descriptions follow:

- Ilex aquifolia (English holly) has spiny leaves and red fruit.
 - Ilex cornuta (Chinese holly) has spiny leaves and red fruit.
 - Ilex crenata (Japanese holly) has no spines and has black fruit except in rare varieties.
 - Ilex opaca (American holly) has spiny leaves and red fruit.
- Male hollies do not bear fruit; are typically used to pollinate female varieties.

MALUS – FLOWERING CRAB

The Flowering Crabs are among the most charming of spring trees. They are not only beautiful when in blossom but many carry ornamental and richly-colored fruit in the autumn. They require no particular cultivation, thriving best in a good loam and full sunshine.

They are deciduous trees and are hardy to Zone 4 except in cases noted below. We cannot ship those that are over six feet tall. These plants are field grown unless shown as bed grown.

EDCO IRON

For experimental use in the control of chlorosis (lack of chlorophyll) in azaleas, gardenias, roses, citrus crops, etc.

Results to date have shown Edco Iron to be very effective in correcting chlorosis in the above crops. Chlorosis may be caused by the excess or deficiency of several major or minor nutrient elements in the plant besides iron, and it may be caused by an excess of water or its lack, but Edco Iron commonly seems to help correct the effect if not the cause of these several conditions.

Full directions for using with each lot.

Prices: 1 lb. \$2.90; 10 or more lbs. at \$2.70 per lb.

ALUMINUM PLANT TAGS

Very convenient to use. Lasts years. $\frac{3}{4}$ inch wide, $3\frac{1}{2}$ inches long.

Made of thin aluminum. Can be embossed with ordinary lead pencil just like writing on an ordinary wood label. Permits writing label right in field. 100 for \$4.00; 500 for \$18.00; 1,000 for \$32.00. Postpaid.
