Growing Vegetables to Save Money?

Here's how Dreer's Can Help You

Through good times and not-so-good times, generations of experienced amateur gardeners have depended on the house of Dreer for help in producing better vegetables. In good times—because, then, only the best was good enough; in times that weren't so good, because these home gardeners were unwilling to gamble, then, with such a vital part of the family food supply. And, in any event, the more productive their Vegetable Gardens were, the more they would save.

There's only one way to be sure of growing strong, healthy vegetable plants that will bear generously. That way, of course, is to be sure of the seed you sow. And you can't be sure of your seed unless you know something about its origin—about the experience and integrity of the people who produce it. Yet there's so little difference in cost between even the poorest seeds and Dreer's Vegetable Seeds that you actually can't afford to overlook the very big difference in what you can get for your money.

This year, plant your garden throughout with Dreer's Vegetable Seeds. Find out for yourself what a vast difference there is in strains of the same vegetable and what the improvements we are constantly making in our strains mean to you in terms of absolutely dependable productivity.

Dreer's Specialties for Better Food Gardens Department of Agriculture.

In each class of vegetables we find some that are superior to others in one or another characteristic. It may be extra earliness or particularly attractive appearance, or superior flavor, or an ideal combination of many desirable factors. Such vegetables logically become leaders and among such leaders, the finest strains are most eagerly sought by the growers.

On this and the following pages we offer what we know to be prize strains of distinctly worth-while leaders among the most useful vegetables. They are not necessarily novelties, but rather specialties which have won their way to the top through meritorious performances in gardens of Dreer customers everywhere.

Mary Washington Asparagus

- 12** This is a special selection from Pedigreed Washington, the original U. S. Dept. of Agriculture introduction, being earlier, larger, and longer, and the stalks slightly more oval in form while it is quite as resistant to disease. Produces large healthy seedlings. Pkt., 10 cts.; oz., 20 cts.; $\frac{1}{4}$ lb., 60 cts.; lb., \$2.00.

Bountiful Beans

- 23** Easily the most productive flat, green-podded, stringless bush bean in cultivation today. Under favorable conditions of soil and season this variety has been known to bear one bushel of pods per 15-foot row in the course of the season. The plants are very vigorous and disease resistant. They bear the bulk of the crop within 75 days from date of planting, the first picking being generally ready in 60 days. The pods average 6 inches long by $\frac{3}{4}$ inch wide, are thick through, of pleasing light green color, very brittle and absolutely stringless. Bountiful tastes as good as it looks. Pkt., 10 cts.; $\frac{1}{2}$ lb., 25 cts.; lb., 40 cts.; 2 lbs., 75 cts.; 5 lbs., \$1.75, prepaid.

Dreer Bush Lima Beans

- 105** Comes in a week or ten days later than our Wonder Bush. The Beans are packed close together in the pods, producing usually four beans each, sometimes five, and are thick, sweet and succulent. An excellent variety, which is particularly valuable for the home garden on account of its productiveness. Note the results of the Experiment Station, printed below. Pkt., 10 cts.; $\frac{1}{2}$ lb., 25 cts.; lb., 45 cts.; 2 lbs., 85 cts.; 5 lbs., \$2.00, prepaid.

The Illinois State Agricultural Experiment Station at Urbana, Illinois, recently concluded trials of five varieties of Bush Lima Beans extending over five years and grown under every conceivable condition, and the *Dreer Bush Lima* shows by far the highest average in yield each year. The combined five year average yields for all these different treatments show the *Dreer Lima Bean* producing a 51 per cent. greater yield than any other variety. For full report of these trials write for *Bulletin 307* addressing above Station.

Dreer's Special Crosby's Egyptian Beet

- 145** This special selection of extra early Beet is as great an improvement over the ordinary Crosby Egyptian as the latter variety is over the old-time Egyptian Blood Turnip Beet and is valuable both for the private gardener and the amateur, on account of its reliability to produce a uniform crop of best quality. The skin is very smooth, bright red and flesh vermilion, very sweet and tender. Pkt., 10 cts.; oz., 25 cts.; $\frac{1}{4}$ lb., 60 cts.; lb., \$1.75.

SPECIAL CROSBY'S EGYPTIAN BEET

Sprouting Broccoli "Calabrese"

- 179** This fine vegetable is now to be seen in good produce stores and markets, and is always in good demand. It makes a welcome change from the usual "greens," and its distinctive flavor and high tonic qualities merit for it space in every garden. Of easy culture, it can be grown for an early crop, starting seeds in hotbed or greenhouse in February or March and later transplanting the same as Cabbage, or it succeeds equally well when grown for fall use, sowing seed in the open bed in May and transplanting later thirty inches apart each way. Pkt., 15 cts.; $\frac{1}{2}$ oz., 50 cts.; oz., 90 cts.; $\frac{1}{4}$ lb., \$3.00.

Prices for Vegetable Seeds offered in this list are the lowest for years, while high quality has been strictly maintained

Lyons Swiss Chard

- 169** An excellent and most useful vegetable, a row or two of which should be in every garden. This variety will quickly produce plants from which leaves may be cut all summer, as you can cut right down to the ground, and new shoots will soon spring up and make a fast growth. Those plants which are allowed to grow will make large crumpled and curly dark green leaves with thick white mid-ribs, which are delicious when cooked and served like asparagus, while the leafy parts make excellent "greens." Pkt., 10 cts.; oz., 20 cts.; $\frac{1}{4}$ lb., 45 cts.; lb., \$1.25.

Dreer's Giant Globe Cabbage

- 201** For those of our customers who desire a very large cabbage we offer this new variety. This grows an immense solid head, and under favorable conditions regarding soil and sufficient moisture often reaches a weight of 30 pounds. Interior is white and very solid, and we would class it as a second early. Well adapted for sauer-kraut on account of its large size and fine white interior quality. Pkt., 20 cts.; $\frac{1}{2}$ oz., 60 cts.; oz., \$1.00; $\frac{1}{4}$ lb., \$3.50.

Golden Acre Cabbage

- 204** This excellent variety is the earliest round headed Cabbage. It will mature at least 7 days ahead of the earliest strains of Jersey Wakefield, considered the standard Early of the country. The heads of Golden Acre cabbage are perfectly round, firm, and of exceptionally fine texture, heavy mid-ribs being entirely absent.

GOLDEN ACRE CABBAGE

They average in weight about 4 pounds and produce very few outer leaves, permitting close planting in the row. Pkt., 15 cts.; $\frac{1}{2}$ oz., 40 cts.; oz., 75 cts.; $\frac{1}{4}$ lb., \$2.00.

Improved Peking Chinese Cabbage

- 223** This fine salad vegetable resembles Cos Lettuce. The head is long and compact, and all but the outer leaves blanch a creamy white. Very crisp and tender, and in every way adapted for the home garden. We have recently secured a much improved strain and recommend a trial. Pkt., 10 cts.; $\frac{1}{2}$ oz., 30 cts.; oz., 50 cts.; $\frac{1}{4}$ lb., \$1.50.

Dreer's Super Strain Snowstorm Cauliflower

- 261** This has again been brought to the highest pitch of perfection by the careful reselection of plants by our seed growers in Denmark. It has now been tried by our customers in many sections; and the report is alike from each. "The best they ever grew." It is dwarf, with short outer leaves and can be planted close, 2 feet apart each way. It always makes a fine, large and exceedingly beautiful snowy white head, much earlier than any other variety, and is a sure prize-winner at Fair or Exhibition. Pkt., 25 cts.; $\frac{1}{4}$ oz., \$1.75; $\frac{1}{2}$ oz., \$3.00; oz., \$5.50.

Golden Plume Celery

- 274** A large early Celery of superfine quality and appearance. Large heavy stalks with a full, solid heart of golden yellow, easy to blanch, a good keeper, and always of the crisp, brittle and nutty quality so much desired. Shows a marked resistance to blight, so often affecting the early yellow strains and this with our special strain of Easy Blanching, offered on page 18 we consider the two finest Celeries in cultivation. Pkt., 25 cts.; $\frac{1}{4}$ oz., \$1.75; $\frac{1}{2}$ oz., \$2.75; oz., \$5.00.

IMPROVED PEKING
CHINESE CABBAGE

Golden Sunshine Sugar Corn

- 322** This valuable variety was developed and introduced by Dr. Yeager of the North Dakota Agricultural Experiment Station and has instantly sprung into popular favor. Of a rich golden color the ears are about one inch longer than Bantam, and have 12 rows instead of 8, while quality is fully equal to the latter sort. Most important, however, is the exceptional earliness of Golden Sunshine, for it is actually from 7 to 10 days earlier than Bantam. Originators stock. Pkt., 10 cts.; $\frac{1}{2}$ lb., 25 cts.; lb., 40 cts.; 2 lbs., 75 cts.; 5 lbs., \$1.75, prepaid.

Early Fortune Cucumber

- 371** A splendid selection of "White Spine," bearing large numbers of handsome, uniform fruits, cylindrical in shape, with very dark green skin and thick flesh, tender and crisp. Pkt., 10 cts.; oz., 20 cts.; $\frac{1}{4}$ lb., 50 cts.; lb., \$1.50.

Longcu Cucumber

- 383** A fancy Cucumber growing 12 or 13 inches in length, with rich deep green skin and few spines, and equal in appearance to the greenhouse product. Longcu is suited equally well to both outdoor and under glass production, and it is specially valuable outside on account of its surprising earliness, as it can be picked along with Early Fortune, and other early slicing sorts, under reasonably favorable growing conditions. Pkt., 15 cts.; $\frac{1}{2}$ oz., 35 cts.; oz., 50 cts.; $\frac{1}{4}$ lb., \$1.50; lb., \$5.00.

Dreer's Giant Fringed Endive

- 412** Endive is a plant requiring rapid growth and is highly esteemed for table use, and in some states can be grown all the year round. The above sort is a strong growing variety with a large white heart and broad stems, good for fall and winter. On account of the beautifully curled and finely cut leaves this variety is used freely for garnishing as well as making a delicious salad. Pkt., 10 cts.; oz., 25 cts.; $\frac{1}{4}$ lb., 65 cts.

DREER'S IMPROVED HANSON LETTUCE

Dreer's Improved Hanson Lettuce

- 462** Although introduced by us over fifty years ago, this Lettuce is still the prize winner among the crisp heading varieties, and the fact that it has been popular for half a century, and that it is still offered by the leading seedsmen of the country is proof of its sterling qualities. It reaches a large size, with light green, curled leaves with fringed edges enclosing a white heart of remarkable solidity. Crisp and brittle all over, and free of the flat watery taste which some crispheads unfortunately have. We recommend it highly for growing during the hot summer months. Pkt., 10 cts.; $\frac{1}{2}$ oz., 20 cts.; oz., 30 cts.; $\frac{1}{4}$ lb., 90 cts.

Dreer's "All Heart" Lettuce

- 440** The name of this variety is truly descriptive, because the few loose outer leaves cause the heads to be almost entirely solid hearts. Now thoroughly tested in all soils and sections, we have yet to hear of an instance where Dreer's All-heart Lettuce did not come through with flying colors. While suitable for summer use in cool sections, it is pre-eminently an early spring variety and gives best results in soils holding an abundance of humus or other quickly available plant food. The heads are of delicate yellowish-green color, making it a most attractive market variety, and the flavor is excellent. Pkt., 10 cts.; $\frac{1}{2}$ oz., 25 cts.; oz., 35 cts.; $\frac{1}{4}$ lb., \$1.00.

Tip Top Muskmelon

- 524** A splendid variety, coming in just ahead of Rocky Ford; fruits large and deep, skin emerald green in color, turning yellow when ripe, globular or slightly flattened, irregularly and indistinctly ribbed and lightly netted; flesh very thick, sweet and of a deep, rich salmon color, having an exceedingly small seed cavity. One of the best melons for the home garden and local market. Pkt., 10 cts.; oz., 25 cts.; $\frac{1}{4}$ lb., 60 cts.; lb., \$1.75.

TIP TOP MUSKMELON

Muskmelon**Hearts of Gold, or Imp'd Hoodoo**

- 505** The vines make a strong and vigorous growth, which makes them remarkably disease-resistant and subsequently prolific of delightfully flavored fruits. The Melons are of medium size, round and distinctly ribbed, and present a fine, attractive appearance. The rind and flesh are very firm, the skin is thickly netted, and the flesh a rich, deep orange color, fine grained with a very small seed cavity and of remarkable sweetness and spicy flavor. Pkt., 10 cts.; oz., 25 cts.; $\frac{1}{4}$ lb., 60 cts.; lb., \$1.75.

Prizetaker Onion

- 578** The large size and handsome appearance of this Onion makes it equally desirable for the home garden or for market. The true Prizetaker Onion is globe-shape, has pale yellow skin and white flesh, which is very mild and of delicate flavor. No sets are required, as the large Onions are grown the first year from seed sown during the spring, thus making it a very desirable Onion for the home garden. This is a good variety of Onion for sowing under glass in February for transplanting, and when started in this manner immense bulbs can be raised to perfection. Pkt., 10 cts.; $\frac{1}{2}$ oz., 20 cts.; oz., 30 cts.; $\frac{1}{4}$ lb., 85 cts.; lb., \$3.00.

**DREER'S DWARF PERFECTION
PARSLEY** **Dreer's Dwarf Perfection Parsley**

- 600** Easily the most perfect strain of this fine dwarf Parsley. The habit is regular and compact, and the exquisitely fine and prettily curled leaves are set very closely on the plant. The color is a wonderful bright pea-green, and flavor surpasses all other Parsley. This variety combines the quality of a fine culinary herb with that of a beautiful decorative plant, and is equally valuable for garnishing purposes and border. Pkt., 10 cts.; oz., 25 cts.; $\frac{1}{4}$ lb., 70 cts.; lb., \$2.25.

Ameer Pea

- 619** A most useful variety suited to the home garden and which will succeed under almost all conditions. Can be planted early in the spring and will produce hardy plants bearing a heavy crop of large, broad, deep green pods containing 7 or 8 peas of very sweet quality. The vines grow about 3½ feet high and to secure the maximum yield should be supported by brush, trellis or strings. Pkt., 10 cts.; $\frac{1}{4}$ lb., 25 cts.; lb., 40 cts.; 2 lbs., 75 cts.; 5 lbs., \$1.75, prepaid.

Laxton's Progress Pea

- 650** The most recent introduction of real merit into the list of large pod dwarf peas, and an ideal sort for the small home garden where space is at a premium. "Progress" grows but 18 inches high, but the vines are exceedingly vigorous and produce the largest pods of any extra early sort. Pods average 4½ inches long, well filled with 8, 9 or 10 deep green, large peas, of delightful flavor. Pkt., 10 cts.; $\frac{1}{4}$ lb., 25 cts.; lb., 45 cts.; 2 lbs., 80 cts.; 5 lbs., \$1.85, prepaid.

Early Eight-Weeks Pea

- 628** For the private gardener, who demands a really good first early dwarf Pea, the Early Eight-Weeks is very desirable. Ready for picking before any of the other extra early varieties and the quality all that could be desired. The vines are very dwarf, growing only 12 to 15 inches in height and loaded with well filled pods, which are quite large in size for so early a variety, and the peas are exceedingly tender and of a most delicious flavor. Pkt., 10 cts.; $\frac{1}{2}$ lb., 20 cts.; lb., 35 cts.; 2 lbs., 65 cts.; 5 lbs., \$1.55, prepaid.

Early Giant Pepper

- 723** In more Northern latitudes, where formerly only one or two of the smaller early types could be grown with any certainty of securing a crop, this variety will mature large fruits, $4\frac{1}{2}$ to 5 inches high and 4 inches thick, with very thick flesh, and not a trace of fieriness. Color when matured is a bright red, and we consider this introduction of value, particularly so north of Pennsylvania. Pkt., 15 cts.; $\frac{1}{2}$ oz., 50 cts.; oz., 90 cts.; $\frac{1}{4}$ lb., \$3.00.

EARLY GIANT PEPPER

California Wonder Pepper

- 711** Deservedly popular in all parts of the country. The plants are sturdy and upright bearing six, seven or eight smooth, blocky fruits, which mostly reach immense size, measuring $4\frac{1}{2}$ inches in length by 4 inches in diameter. The outstanding feature of the fruit, however, is the remarkable thickness of their sweet crisp fleshy walls, making them unequalled for stuffing or for salads, etc. They will keep for a long period after picking, too, and we are sure that California Wonder will win the approval of all who see it. Pkt., 15 cts.; $\frac{1}{2}$ oz., 50 cts.; oz., 85 cts.; $\frac{1}{4}$ lb., \$2.50.

Cardinal Globe Radish

- 770** Among quite a number of the little round red Radishes available, this is easily one of the most dependable in that it perfects uniformly handsome round globes within 30 days from sowing seeds. The radishes when overgrown show a tendency to become slightly elongated or olive-shaped, but they remain in fit condition for use about a week or ten days longer than the average extra early, round red variety. It is a most attractive Radish, of brilliant cardinal red color, with pure white flesh, of delicate crispness and delightful flavor. Equally useful for growing under glass in frames or greenhouses as well as for early outdoor sowing. Pkt., 10 cts.; oz., 20 cts.; $\frac{1}{4}$ lb., 50 cts.; lb., \$1.50.

Have a supply of Vegetable Seeds on hand to replace the varieties used up. Beans, Beet, Lettuce, Radish, and Spinach are all suitable for filling in. Keep your garden producing for you.

EARLY EIGHT-WEEKS PEAS

New Ruby Radish

- 798** This variety does not attain a large size, but is very attractive and quickly forms a root to a condition suitable for eating. The shape is nearly round, and color of skin deep red; flesh white and very crisp. The tops are not large, and it is a good variety for forcing. Pkt., 10 cts.; oz., 20 cts.; $\frac{1}{4}$ lb., 50 cts.; lb., \$1.75.

Long Black Salsify, or Scorzonera

- 834** This is easily grown in the same manner as the other varieties of Salsify, but the fleshy taproot develops a black skin. This sort has the important advantage however, in that the roots if not used may remain in the ground till needed and they will increase in size without losing their tenderness and fine flavor. Pkt., 10 cts.; $\frac{1}{2}$ oz., 20 cts.; oz., 35 cts.; $\frac{1}{4}$ lb., \$1.00; lb., \$3.50.

CARDINAL GLOBE RADISH

Dreer's Improved Long-Standing Spinach

- 845** Most varieties of Spinach have the bad habit of shooting to seed before half of the crop has been disposed of, but the outstanding feature of the above sort is, as its name implies, its remarkable long standing qualities. The plant forms compact thick tufts, with numerous leaves of a rich dark green, broad and pointed, and much crumpled. A sowing of this variety every 3 or 4 weeks will insure a constant supply of this healthful vegetable. Pkt., 10 cts.; oz., 15 cts.; $\frac{1}{4}$ lb., 30 cts.; lb., 85 cts.

Cocozelle Bush Squash

- 862** It has only been recently that scientists have discovered the presence of remarkable quantities of vitamins in summer squash, and doctors now prescribe an abundance of squash for children backward in physical development. One of the richest vitamin-bearers among summer squash is Cocozelle Bush, a handsome oblong dark green Italian variety liberally speckled with contrasting marks. Being of compact bush growth, a dozen plants will provide from 2 to 3 dozen handsome fruits averaging 2 to 3 pounds each. This variety is unsurpassed in richness of the cooked product, which is of distinct aromatic flavor and aroma. Pkt., 10 cts.; oz., 20 cts.; $\frac{1}{4}$ lb., 60 cts.; lb., \$2.00.

DREER'S IMPROVED LONG STANDING SPINACH

Pritchard (Scarlet Topper) Tomato

- 940** Since the introduction of the Break O'Day Tomato, also offered in this catalogue, the Pritchard has been developed to a stage where we feel safe to offer it to our many home gardening friends. This, like Break O'Day, must be credited to the valuable breeding work performed by the late Dr. F. J. Pritchard of the U. S. Dept. of Agriculture. It is a fine early with large smooth globular fruits, ripening to a clear scarlet right up to the stem. Flesh is a rich deep red with few seeds and no core. Vine grows erect and is well foliated. Like all Tomato varieties this sort amply repays liberal fertilizing, and in our opinion Pritchard is worth a place in any garden. Pkt., 25 cts.; $\frac{1}{2}$ oz., 60 cts.; oz., \$1.10; $\frac{1}{4}$ lb., \$3.75.

TABLE QUEEN SQUASH ($\frac{1}{4}$ size)

Squash—Table Queen or Des Moines

- 879** A splendid small, home garden variety of trailing habit. The numerous fruits are acorn shaped, about six inches long by about four inches thick through, deeply ribbed and tapering to an abrupt point. The skin is a very dark green, while flesh is a deep yellow, thick, dry, and sweet. Pkt., 10 cts.; oz., 20 cts.; $\frac{1}{4}$ lb., 60 cts.; lb., \$2.00.

Break O'Day Tomato

- 896** A recent introduction from the U. S. Dept. of Agriculture and aptly called the Early Marglobe, as it picks about 10 or 12 days ahead of the Marglobe, while fruits resemble that fine variety, being round, smooth, solid and of fine scarlet color. Break O'Day is also highly resistant to the usual tomato diseases. The plants are vigorous and open in growth and can be picked over a surprisingly long season. Pkt., 15 cts.; $\frac{1}{2}$ oz., 50 cts.; oz., 90 cts.; $\frac{1}{4}$ lb., \$3.00.

Dreer's Select Strain Globe Tomato

- 910** Over Florida especially, Globe Tomato now rules supreme, and may be picked green, crated and shipped north, arriving in perfect condition and color. Fruits are borne in clusters of 4 to 6. They average 6 ounces each, are perfectly globe-shaped, except in the first clusters on which the largest specimens are inclined to be somewhat flat. Globe is among the most solid of all tomatoes, of mild flavor, and beautiful pink or purple color which never fails to attract. Pkt., 20 cts.; $\frac{1}{2}$ oz., 65 cts.; oz., \$1.00; $\frac{1}{4}$ lb., \$3.50.

A "DREER" GRASS
LAWN

DREER'S CELEBRATED LAWN GRASS SEEDS

OUR "EVERGREEN" LAWN GRASS WILL PRODUCE ATTRACTIVE LAWNS

The "Dreer" Lawn Grass

This is by far the best mixture of grasses offered for the purpose of quickly producing a permanent lawn. It is prepared from our own formula, and is a careful blending of varieties adapted to producing the thick growth and velvety appearance so much sought after. Each variety of grass in its composition is there for a special purpose; some for making strong fibrous roots, which take hold upon the soil and keep the turf in place, others of a creeping nature quickly fill up any bare spots which may be caused by the taller sorts dying down; varieties which are useful for their color value, and also kinds that are able to withstand the beating down of excessive rains.

Whether you want to seed a small grass plot in your yard, or a lawn of more pretentious size, you should use this grass mixture. For the convenience of customers, we put this seed up in various sized packages, from the single pint, which is sufficient to cover 100 square feet of ground, to such quantities as are required for seeding large lawns where six bushels of seed to the acre are required. Per pt., 25 cts.; per qt., 45 cts.; 2 qts., 85 cts.; 4 qts., \$1.40; peck, \$2.50, prepaid. By express or freight at purchaser's expense, $\frac{1}{2}$ bushel (10 lbs.), \$4.50; bushel (20 lbs.), \$9.00; 100 lbs., \$44.00.

Dreer's "Evergreen" Lawn Grass

This special mixture produces beautiful and permanent lawns. It is made from our own formula, and composed of grasses which are adapted for the purpose of producing turf which retains its rich green color and velvety appearance throughout the entire summer and fall. In making up this brand we are careful to use only seed that has been thoroughly re-cleaned. Per pt., 20 cts.; per qt., 35 cts.; 2 qts., 65 cts.; 4 qts., \$1.25; peck, \$2.00, prepaid. By express or freight, at purchaser's expense, $\frac{1}{2}$ bushel (10 lbs.), \$3.50; bushel (20 lbs.), \$7.00; 100 lbs., \$33.50.

Dreer's "Shady Place" Grass

Usually it is quite difficult to obtain a satisfactory growth of grass under trees and in shady places. The grasses used in this formula are only those that are well adapted for growing in shade, and as it blends well with our regular Lawn Grass Mixture, it may be used on those portions of the lawn which are shaded by trees, buildings, etc., thus covering the whole area with a rich green sward. In spring give a light re-seeding, then a top dressing of finely screened soil or sand, together with Bone Meal, to repair the damage done by the winter rains. Per pt., 25 cts.; per qt., 45 cts.; 2 qts., 85 cts.; 4 qts., \$1.40; peck, \$2.50, prepaid. By express or freight, at purchaser's expense, $\frac{1}{2}$ bushel (10 lbs.), \$4.50; bushel (20 lbs.), \$9.00; 100 lbs., \$44.00.

"Putting Green" Mixture

The varieties comprising this mixture are all of the fine-bladed, low-growing and most hardy kinds, and maintain their rich, green color throughout the season. Wherever a billiard table smoothness is necessary, this superfine mixture will give the desired result. Per pt., 40 cts.; per qt., 75 cts.; 2 qts., \$1.40; 4 qts., \$2.40; peck, \$4.50, prepaid. By express or freight, at purchaser's expense, $\frac{1}{2}$ bushel (12 $\frac{1}{2}$ lbs.), \$8.25; bushel (25 lbs.), \$16.50; 100 lbs., \$65.00.

"Seashore" Lawn Grass

A rich, green lawn is especially desirable at the seashore, but unless the right mixture of grasses and clover are used the result will be disappointing. Our Seashore Lawn Grass is composed of strong-rooted varieties which quickly produce a good turf. In preparing the land it should first be top-dressed with about four inches of good soil, as grass will not grow well in pure sand and in order to keep the seashore lawn in good condition it should be watered liberally every evening, and also have an occasional application of our sterilized Sheep Manure in order to keep up a vigorous growth. Per pt., 25 cts.; per qt., 45 cts.; 2 qts., 85 cts.; 4 qts., \$1.40; peck, \$2.50, prepaid. By express or freight, at purchaser's expense, $\frac{1}{2}$ bushel (10 lbs.), \$4.50; bushel (20 lbs.), \$9.00; 100 lbs., \$44.00.

DREER'S "SEASHORE" LAWN GRASS

"Southern" Lawn Grass

It has heretofore, always been a difficult task, in tropical and semi-tropical climates, to keep the lawn attractive, but we can recommend this special mixture of Grass Seeds, peculiarly adapted by maturing at different seasons, for providing an all the year round green lawn in Southern States, subjected as they are to long hot summers. With this seed and given the usual attention in the way of watering and fertilizing, an excellent lawn may be maintained. Per pt., 25 cts.; per qt., 45 cts.; 2 qts., 85 cts.; 4 qts., \$1.40; peck, \$2.50, prepaid. By express or freight, at purchaser's expense, $\frac{1}{2}$ bushel (10 lbs.), \$4.50; bushel (20 lbs.), \$9.00; 100 lbs., \$44.00.

Dreer's Terrace Grass

Ordinary lawn grass will not hold the soil on terraces and embankments, which require a thick turf, composed of varieties which make strong roots to take hold of the soil and prevent washing by heavy rains. Our Terrace Grass is a carefully prepared combination of such grasses as will fill the requirements by making a quick growth of grass which will form a strong mat and present a good appearance. Per pt., 25 cts.; per qt., 45 cts.; 2 qts., 85 cts.; 4 qts., \$1.40; peck, \$2.50, prepaid. By express or freight at purchaser's expense, $\frac{1}{2}$ bushel (10 lbs.), \$4.50; bushel (20 lbs.), \$9.00; 100 lbs., \$44.00.

White Dutch Clover Seed

Excellent for use on lawns; forms a close very dwarf herbage and will keep green during long periods of hot dry weather. Oz., 10 cts.; $\frac{1}{4}$ lb., 30 cts.; $\frac{1}{2}$ lb., 50 cts.; lb., 95 cts.; postpaid. By express or freight, at purchaser's expense, lb., 85 cts.; 5 lbs., \$4.00; 10 lbs., \$7.75; bushel (60 lbs.), \$45.00; 100 lbs., \$75.00.

*Haricots, FR.***BEANS—Dwarf or Bush***Haba, Sp.
Bohnen, GER.***One pound will plant about fifty feet of drill.**

CULTURE—Plant any time after the weather has become firmly settled, say around middle of May in the latitude of Philadelphia. Most any soil will bear good crops, but well enriched sandy loam will give biggest returns per square foot. Sow seeds in rows 2 to 2½ feet apart, dropping the beans four inches apart in the row, covering about 2 inches deep. Hoe as soon as seedlings appear, and when they begin to form second or third pair of leaves, hill the rows slightly to support the plants. Repeat this hilling process as the plants grow larger, bearing in mind, however, that beans should never be cultivated while wet with either dew or rain. For a succession of young, brittle pods, sow every other week up to August 1st.

Wax or Yellow Pod Varieties

-
- 65 Black Wax or Pencil Pod, Improved.** An extra fine, early Bean of the highest quality, and, characteristic of the black seeded varieties, may be planted earlier than seed of other colors, being much hardier. BEANS—Dwarf or Bush

Wax or Yellow-Pod Varieties

79 Round Pod Kidney, or Brittle Wax. A fine early Bean of very high quality and one that we can unhesitatingly recommend. The pods grow up to six inches long and are thick, perfectly round, and of a clear yellow color. So brittle and stringless are the pods that the variety is often called for under the name of Brittle Wax. Pkt., 10 cts.; $\frac{1}{2}$ lb., 25 cts.; lb., 40 cts.; 2 lbs., 75 cts.; 5 lbs., \$1.75, prepaid.

84 Sure Crop Stringless Wax. Much resembles Bountiful in the sturdy character and disease resistant constitution of its plants. It starts bearing within 60 days after seeds are sown. The pods average 6 to 7 inches long, are very meaty, flat but thick through, and in common with most black-seeded varieties, is very hardy and may therefore be planted several days earlier than the light-seeded sorts. Pkt., 10 cts.; $\frac{1}{2}$ lb., 25 cts.; lb., 40 cts.; 2 lbs., 75 cts.; 5 lbs., \$1.75, prepaid.

DWARF SHELL BEANS

Culture—These are grown to maturity, dried, shelled, and stored for winter use, being used exclusively for baking and for soups. Superior in every way to canned beans. No garden should be without a few rows of these every year. Plant when ground is warm in spring and up to July 1st, in rows 2 feet apart and beans 3 inches apart, $1\frac{1}{2}$ inches deep. Keep well hoed and draw the earth up to the stems, but only when dry, as working when wet with rain or dew will cause rust and injure the crop.

BEANS—POLE or RUNNING

Culture—In common with Pole Limas (see culture directions on page 12), these are rank growers and consequently rank feeders. Do not attempt to grow Pole Beans on poor, thin soil, but enrich the hills well with liberal quantities of well-rotted manure or humus. **One pound will plant 100 hills.**

Green Pod Varieties

128 Kentucky Wonder or Old Homestead. Combines size and quality in an extraordinary degree. Pods are generally borne in clusters of 2 or 4, individual pods averaging 7 or 8 inches long. They are deeply saddle backed, very fleshy and develop a slight string. Kentucky Wonder matures the bulk of its crop in from 80 to 100 days. Where poles are not available, wire or heavy string supports should be provided since the vines are rank growers, bearing exceptionally heavy crops. POLE or RUNNING BEANS

Green Pod Varieties, Continued

- 127 Horticultural, or Speckled Cranberry.** Grown for shell beans exclusively, for, unless used while quite young, pods show strings. Pods 5 inches long, pale green, but become streaked with red when mature. Pkt., 10 cts.; $\frac{1}{2}$ lb., 25 cts.; lb., 35 cts.; 2 lbs., 65 cts.; 5 lbs., \$1.55, prepaid.

Wax Pod Varieties

- 137 Kentucky Wonder Wax.** A yellow podded "Kentucky Wonder," which bears a large quantity of rich golden-yellow pods from the time the plant is about half grown until it is killed by frost in the fall. Pkt., 10 cts.; $\frac{1}{2}$ lb., 25 cts.; lb., 40 cts.; 2 lbs., 75 cts.; 5 lbs., \$1.75, prepaid.
- 136 Dreer's Golden Cluster Wax.** Introduced by us over 40 years ago. The handsome pods are 6 inches long by $\frac{3}{4}$ inch broad, and are borne in clusters of 4 to 6 and hang on the plants literally by the handfuls. Those pods that are not gathered while young will ripen a very useful white product of dry shell beans. Pkt., 10 cts.; $\frac{1}{2}$ lb., 25 cts.; lb., 40 cts.; 2 lbs., 75 cts.; 5 lbs., \$1.75, prepaid.

BUSH LIMA BEANS

Culture—Lima Beans are very susceptible to cold and seeds should not be planted until the ground has become thoroughly warm. Sow about the same time that maple trees unfold their first leaves. Being gross feeders, they should be sown on well enriched land, with the rows $2\frac{1}{2}$ feet apart, dropping the bean six inches apart in the row, **eye down**.

The two halves of the Lima Bean become its seedling leaves, and unless the Beans are placed "eye down" the young plants find it most difficult to push through the soil. In light soil, cover about one inch deep, less on heavier soils. A good fertilizer applied at the rate of 20 pounds to every hundred feet of row, when the plants begin to bloom, will materially increase the yields. Hill plants slightly earlier in the season to hold the pods off the ground. **One pound will plant 50 feet of row.**

- 103 Burpee Improved Bush Lima.** The plants are strong and vigorous, producing large numbers of handsome pods, grown in clusters and well filled with Beans. Pkt., 10 cts.; $\frac{1}{2}$ lb., 25 cts.; lb., 45 cts.; 2 lbs., 85 cts.; 5 lbs., \$2.00, prepaid.
- 105 Dreer's Bush Lima.** (See Specialties, page 1.) Pkt., 10 cts.; $\frac{1}{2}$ lb., 25 cts.; lb., 45 cts.; 2 lbs., 85 cts.; 5 lbs., \$2.00, prepaid.
- 111 Dreer's Wonder Bush Lima.** The earliest maturing lima we offer. The plants are of strong, upright growth, and are completely covered with large pods, many of which contain four beans fully as large as those of the pole limas. The beans are flat and broad and pronounced by many as being superior in flavor to the round, thick-seeded varieties. On account of its unusual earliness, Wonder Bush Lima can be planted well on in the season without much risk of failure. Pkt., 10 cts.; $\frac{1}{2}$ lb., 25 cts.; lb., 40 cts.; 2 lbs., 75 cts.; 5 lbs., \$1.75, prepaid.
- 107 Fordhook Bush Lima.** This most excellent variety gains in popularity each succeeding year. It produces many large pods in clusters and each pod is well filled with 4 or 5 large beans, which are very thick through and of excellent flavor. A great seller on market, and a favorite wherever Bush Lima Beans are grown. Pkt., 15 cts.; $\frac{1}{2}$ lb., 30 cts.; lb., 50 cts.; 2 lbs., 90 cts.; 5 lbs., \$2.00, prepaid.
- 109 Henderson's Bush Lima.** The popular Baby Lima. A bush form of Sieva or Small Lima type, which is largely grown by those who prefer the small size beans, and also in big demand for canning. The plants grow about 20 inches high and are very productive, bearing well filled pods, continuously throughout the season. Pkt., 10 cts.; $\frac{1}{2}$ lb., 25 cts.; lb., 35 cts.; 2 lbs., 65 cts.; 5 lbs., \$1.55, prepaid.

Note—This year particularly a vegetable garden is an economic necessity. It will considerably reduce the weekly food bill and what is of far greater importance the home garden supplies fresh tender produce of a quality unknown to the buyer of "store" vegetables. The work too, is pleasant and healthful and if intelligently arranged the garden can be kept producing nearly all year.

KENTUCKY WONDER WAX POLE BEANS

THE "DREER"
BUSH LIMA BEAN

POLE LIMA BEANS

Culture—Pole Limas are even more tender than the Bush type and should not be planted until toward end of May, or when all danger of frost is passed. Set the poles about 4 feet apart each way and plant 4 to 6 beans, eye downward, around each pole. When plants are up, thin out to 3 plants to a pole. Pinch off the ends when plants overrun the top of the poles. It is well to use a shovelful of rich, light, well-rotted compost to each hill. **One pound of seed will plant 75 to 100 hills.**

- 115 Carpinteria Lima.** Vines are vigorous and make strong growth, producing large quantities of pods, usually containing four large Beans, which are thicker than the ordinary lima, and retain their pale green color even when in the dry state. Pkt., 10 cts.; $\frac{1}{2}$ lb., 25 cts.; lb., 40 cts.; 2 lbs. 75 cts.; 5 lbs., \$1.75, prepaid.
- 117 Dreer's Improved Pole.** In some sections this variety is called Challenger, or Potato Lima. Plants strong, medium late and very productive. Pods contain 4 or 5 thick light green Beans, and shells out more Beans from a given number of pods than any other Pole Lima. Pkt., 10 cts.; $\frac{1}{2}$ lb., 25 cts.; lb., 45 cts.; 2 lbs., 85 cts.; 5 lbs., \$1.95, prepaid.
- 121 King of the Garden.** An old favorite variety of vigorous growth bearing large dark green pods with four or five large white beans of good quality. An improved Large White Lima. Pkt., 10 cts.; $\frac{1}{2}$ lb., 25 cts.; lb., 40 cts.; 2 lbs., 75 cts.; 5 lbs., \$1.75, prepaid.
- 122 Leviathan Early.** The earliest large podded Pole variety in cultivation and an enormous cropper. The shelled beans are of excellent quality. Pkt., 10 cts.; $\frac{1}{2}$ lb., 25 cts.; lb., 40 cts.; 2 lbs., 75 cts.; 5 lbs., \$1.75, prepaid.
- 125 Small or Sieva.** Poles literally loaded with well filled pods. Beans small and white, like the Henderson Bush variety and of fine flavor. This is a fine bean for home canning. Pkt., 10 cts.; $\frac{1}{2}$ lb., 25 cts.; lb., 40 cts.; 2 lbs., 75 cts.; 5 lbs., \$1.75, prepaid.

BROCCOLI

Chou-Brocoli, Fr.

Spargel Kohl, GER.

Brócoli, Sp.

Used in the same manner as Cauliflower and the method of culture is the same. It thrives best in rich soil and during cool weather, and is greatly aided in its growth by frequent hoeing and watering. Sow seed in hotbed in January or February and transplant into cold frames, 2 or 3 inches each way. Set out in open ground early in spring, about $2\frac{1}{2}$ feet apart. To obtain the best flavor, Broccoli should be cooked soon after being cut. **One ounce will produce about 1500 plants.**

- 179 Calabrese, Sprouting.** (See Specialties, page 1.) Pkt., 15 cts.; $\frac{1}{2}$ oz., 50 cts.; oz., 90 cts.; $\frac{1}{4}$ lb., \$3.00.

BEETS

Remolacha, Sp.
Rube, GER.

One ounce will sow 50 feet of drill; 6 lbs. for an acre.

One of the earliest vegetables the garden yields and one of the first to be sown or planted into the garden. For an extra early supply, sow seeds in a hotbed or cold frame by middle of March. Be sure to press the soil in firm contact with the seeds to insure prompt and even germination. By middle of April, plants will be 4 inches tall, when they should be set out in the garden in rows 18 inches apart, with the seedlings four inches apart in the row. For a continuous supply throughout the season, make the first sowing outdoors along middle of April and again every two weeks up to August 1st. To be most palatable, Beets should be eaten while quite young, when the bulbs average two inches in diameter, no more. To secure a good start outdoors, the gardener should always walk over the rows after the seeds are sown. To secure a uniformly well shaped product, seedlings should be thinned out to stand 3 to 4 inches apart in the row. Those that are pulled up will make good greens or may be transplanted into other rows.

EARLY WONDER BEET

- 141 Bassano, Early.** An old-time excellent early, growing to a large size without getting "woody." Flesh is white and rose-colored, but is probably sweeter than any other Beet in our list. Pkt., 10 cts.; oz., 20 cts.; $\frac{1}{4}$ lb., 45 cts.; lb., \$1.25.
- 140 Bastian's Half-long Blood.** An excellent variety particularly for fall or winter use. The roots are smooth, flesh bright red and the quality is very good. It is a splendid keeper, and for winter use the seed should be sown early in July. Pkt., 10 cts.; oz., 25 cts.; $\frac{1}{4}$ lb., 60 cts.; lb., \$1.75.
- 142 Crimson Globe.** This Beet is remarkable for its smooth skin and good shape. It is a second early variety, does not grow large and coarse, the matured Beets being medium in size and rather oblong in shape. The flesh and skin are both very dark and quality fine, being sweet and tender. We are confident that this Beet will please all who plant it. Pkt., 10 cts.; oz., 20 cts.; $\frac{1}{4}$ lb., 50 cts.; lb., \$1.50.
- 144 Crosby's Egyptian.** Slightly later than the following sort, and not quite so dark in color. Ready while small and at all times tender and sweet. Pkt., 10 cts.; oz., 20 cts.; $\frac{1}{4}$ lb., 45 cts.; lb., \$1.25.

GIANT LUCULLUS SWISS CHARD

Chou pomme, Fr.

CABBAGE

*Repollo, Sp.
Kohl-Kraut, GER.*

Sow one ounce for 2,000 plants, 6 ounces for one acre.

CULTURE—One of the few vegetables that American home gardeners may enjoy the year around and here is a program whereby to obtain a well balanced supply of firm heads of high quality. Toward end of February, sow seeds of either Jersey Wakefield, Copenhagen Market, or any other early variety, transplanting the seedlings into flats four inches apart each way as soon as they become large enough to be handled. Harden these by gradually giving them more air each day and set into rows 2½ feet apart with the plants about 2 feet apart in the row; cultivate freely and water regularly if the natural rainfall proves deficient. About April 1st or as soon as the soil can be put in good condition outdoors, sow seeds of the same varieties together with some summer sorts like All Seasons, Early Summer, Succession, etc. This planting will provide Cabbage from middle of July until late in the fall. About middle of May, sow seeds of late winter keeping varieties like Danish Ballhead, Dreer's Select Flat Dutch, and others, thinning out the plants to stand 4 inches apart in the row as soon as they are large enough to be handled. By July 1st, set these plants in rows 3 feet apart with the plants 2 feet apart in the row, cultivating and watering regularly. Should the white cabbage bug prove troublesome, sprinkle with slug shot, tobacco dust or Whale Oil Soap solution, in short, any safe remedy not containing arsenic or other poisons.

Early Varieties

191 Charleston, or Large Wakefield. A week later but much larger than Early Jersey Wakefield and has all of the fine qualities of the latter. An excellent large early conical head and a dependable cropper. Pkt., 10 cts.; ½ oz., 25 cts.; oz., 40 cts.; ¼ lb., \$1.25.

193 Copenhagen Market. This excellent variety can be depended upon for making large solid heads at an early season. The heads are grown upon a remarkably short stem, are solid and large in size, weighing 7 to 10 pounds, with light green leaves and of good quality. It is the largest of the early round-headed varieties, and its habit of growth allows of its being planted close together in the garden. Pkt., 10 cts.; ½ oz., 35 cts.; oz., 60 cts.; ¼ lb., \$1.75.

204 Golden Acre. The well known extra early round headed sort. (See Specialties, page 2.) Pkt., 15 cts.; ½ oz., 40 cts.; oz., 75 cts.; ¼ lb., \$2.00.

208 Jersey Wakefield, Small Extra Early. The earliest strain of the type, perfecting shapely narrow pointed heads, averaging 5 lbs. each within 90 days after seeds are sown. Of compact growth and heads very solid. Heads ready for cutting before even Golden Acre, and of delicate tender quality. Pkt., 10 cts.; ½ oz., 25 cts.; oz., 40 cts.; ¼ lb., \$1.25.

206 Jersey Wakefield, Selected Early. Although the round headed sorts offered here are becoming increasingly popular, this old standard sort still has a host of friends. Thus we are extremely careful of our stock of this, and have confidence that our seed will produce early, solid pointed heads of splendid uniformity. Neither quality nor fine texture are lacking, leaves having very small midribs, which improve both appearance and flavor when cooked. Pkt., 10 cts.; ½ oz., 25 cts.; oz., 40 cts.; ¼ lb., \$1.25.

COPENHAGEN MARKET CABBAGE

SWISS CHARD

One ounce will sow 100 feet of row.

Culture—Sow in drills 1 foot apart and 1 inch deep, as early as the ground can be worked, and when large enough thin out to stand 6 inches apart in the row. Continue sowings for succession crops, until the middle of July.

167 Giant Lucullus. Makes large curly leaves, which may be cut all summer, with thick light-colored mid-ribs, which are delicious when cooked and served like asparagus, while the leafy parts make excellent "greens." Pkt., 10 cts.; oz., 20 cts.; ¼ lb., 45 cts.; lb., \$1.25.

169 Lyons. Produces dark green curled leaves, with very broad, white mid-ribs. Fine appearance and splendid cooking qualities. Pkt., 10 cts.; oz., 20 cts.; ¼ lb., 45 cts.; lb., \$1.25.

Pkt., 10 cts.; $\frac{1}{2}$ oz., 20 cts.; oz., 35 cts.; $\frac{1}{4}$ lb., \$1.00.

Late Winter Sorts

- 195 Danish Ball Head.** The leading late tall stem variety in many sections, and a fine sauerkraut cabbage. Heads average ten to twelve pounds, are round, fine keepers. The strong growth and its good quality makes it a most valuable Cabbage. Pkt., 10 cts.; $\frac{1}{2}$ oz., 25 cts.; oz., 40 cts.; $\frac{1}{4}$ lb., \$1.25.
- 196 Danish Roundhead.** Another good sauerkraut variety, slightly earlier than Ball Head, with a shorter stalk, and very hard. The interior leaves are pure white and of sweet flavor. Pkt., 10 cts.; $\frac{1}{2}$ oz., 25 cts.; oz., 40 cts.; $\frac{1}{4}$ lb., \$1.25.

A splendid keeper and will keep well until the following spring. Pkt., 10 cts.; $\frac{1}{2}$ oz., 20 cts.; oz., 35 cts.; $\frac{1}{4}$ lb., \$1.00.

PERFECTION DRUMHEAD SAVOY CABBAGE

Savoy Cabbage

- 210 Perfection Drumhead Savoy.** The largest solid heading Savoy and our strain is the best procurable. The plants are strong and vigorous, deep green and heavily savoyed and curled. In flavor, Savoy cabbage is quite distinct, preferred by many connoisseurs to any other cabbage, and we highly recommend it. Pkt., 10 cts.; $\frac{1}{2}$ oz., 25 cts.; oz., 40 cts.; $\frac{1}{4}$ lb., \$1.25.

Red Cabbage

- 205 Haco Early Red.** A small round early sort, ideal for the garden of limited size. Makes a very solid head of delicate texture. Pkt., 10 cts.; $\frac{1}{2}$ oz., 25 cts.; oz., 40 cts.; $\frac{1}{4}$ lb., \$1.25.
- 218 Large Red Drumhead.** A large-heading variety chiefly used for "slaw" and pickling, solid and crisp. Pkt., 10 cts.; $\frac{1}{2}$ oz., 20 cts.; oz., 35 cts.; $\frac{1}{4}$ lb., \$1.00.
- 219 Mammoth Rock Red.** The largest heading red cabbage and a sure-heading sort, round and solid. A favorite home pickling sort. Pkt., 10 cts.; $\frac{1}{2}$ oz., 25 cts.; oz., 40 cts.; $\frac{1}{4}$ lb., \$1.25.

Chinese, or Celery Cabbage

Chinese Cabbage really is not a cabbage but a Mustard, forming a compact, elongated, tightly folded head, and is good all the way through. Delicious served as a salad with a French dressing, or like Cole Slaw, with Mayonnaise. The green portion of the leaves may also be served like Spinach, while the heavy midribs are very palatable like Swiss Chard, or Asparagus. We offer the two best sorts. Seeds should not be sown before the middle of July, as early grown plants soon shoot to seed.

- 222 Wong Bok.** This produces a large, broad head, very solid and compact. Wong Bok is entirely self folding and the heads need no tying up or blanching of any kind. Pkt., 10 cts.; $\frac{1}{2}$ oz., 25 cts.; oz., 40 cts.; $\frac{1}{4}$ lb., \$1.00.
- 223 Improved Peking.** (See Specialties, page 2.) Pkt., 10 cts.; $\frac{1}{2}$ oz., 25 cts.; oz., 40 cts.; $\frac{1}{4}$ lb., \$1.00.

COLLARDS

Chow Caba, FR.

Cabu, SP.

Blaeterkohl, GER.

Culture—Sow and cultivate same as late cabbage. The crop of greens may be grown directly in the seed rows, or the plants may be transplanted and set two feet apart in the rows. Best after being touched by frost, which greatly improves flavor and tenderness. **One ounce will produce about 2000 plants.**

- 302 Creole or Southern.** Grows 2 to 3 feet high, and forms bunches of tender delicate leaves slightly curled at edges. Pkt., 10 cts.; oz., 20 cts.; $\frac{1}{4}$ lb., 40 cts.; lb., \$1.00.

Carotte, FR.

CARROT

Zanahoria, SP.
Mohre, GER.

One ounce will sow 100 feet of drill; 3 to 4 pounds for an acre.

CULTURE—One of the few crops that will do well in all soils although a good deep, friable loam will produce the best looking roots. For an early supply, sow seeds of early sorts, as soon as the soil can be dug, placing rows 18 to 24 inches apart and thinning out seedlings to stand 2 to 3 inches apart in the row. Make repeated sowings every 2 weeks. For a winter supply, sow the larger growing firm fleshed varieties like Danvers, Rubicon, etc., any time during May. The much larger stock varieties should be thinned out to stand 6 to 8 inches apart in rows, 2½ to 3 feet apart. Varieties marked with a star are the best for stock feeding.

CHANTENAY CARROT

232 Chantenay. This is a large thick carrot, stump-rooted and slightly tapered towards the bottom and the skin is very smooth, orange-red in color, making it of very attractive appearance. The quality is most excellent, being very crisp, tender and of an extra fine flavor. Grow a few rows of this for winter use, as it will store well in a cool dry place. Pkt., 10 cts.; oz., 20 cts.; ¼ lb., 50 cts.; lb., \$1.50.

234 Danver's Half-long Orange. More extensively grown than any other. Of rich orange-red color, smooth and handsome, the 6 or 7 inch roots taper to a blunt point and are sweet, crisp and tender. Produces more bulk to the acre than the larger, longer varieties. This is also a good sort for the home gardener to grow, for storing over winter. Pkt., 10 cts.; oz., 20 cts.; ¼ lb., 50 cts.; lb., \$1.50.

238 *Long Orange, Nichol's Improved. Color deep orange, and when small it may be used for the table, but mostly grown to full size for stock feeding. Pkt., 10 cts.; oz., 15 cts.; ¼ lb., 40 cts.; lb., \$1.25.

236 Oxheart, or Guerande. Good on soils too hard and stiff for longer-growing sorts. Root short, very thick and heavy, with small tap-root; flesh is a bright orange color, fine grained and of sweet flavor. Pkt., 10 cts.; oz., 20 cts.; ¼ lb., 40 cts.; lb., \$1.25.

240 Perfect Forcing, Dreer's. Easily one of the most popular of the early carrots, equally useful for the outdoor garden as well as growing under glass. It is a fine, half long variety of most symmetrical shape, uniform size, and has a remarkably small top. Of attractive bright scarlet color, crisp, and with a singularly small core, so small in fact that in the young product it is hardly noticeable. Pkt., 10 cts.; ½ oz., 15 cts.; oz., 25 cts.; ¼ lb., 70 cts.; lb., \$2.25.

242 Rubicon, Improved. This beautiful half-long stump-root Carrot is about the same length as the well-known Danvers, but is cylindrical, and is rich dark orange in color, very sweet and mild. Remarkably clean-skinned, grows evenly and is easily pulled. Grows best in a soft, deep and mellow soil, which has been well manured. Pkt., 10 cts.; oz., 20 cts.; ¼ lb., 50 cts.; lb., \$1.50.

SCARLET HORN CARROTS

DANVER'S HALF-LONG ORANGE CARROT

244 Scarlet Horn, Early. May be planted very early in spring, and is an excellent summer variety. Tops small and roots grow about 2½ to 3 inches long, reddish-orange and good flavor. May be grown either in frames or in the open ground. Pkt., 10 cts.; oz., 20 cts.; ¼ lb., 40 cts.; lb., \$1.25.

246 Short Horn, Earliest (French Forcing). One of the earliest. Roots are almost globular in shape, about 2 inches long and deep through, of reddish-orange color and excellent flavor. Equally good for forcing under glass and for early or late sowing outdoors. Pkt., 10 cts.; oz., 20 cts.; ¼ lb., 50 cts.; lb., \$1.50.

252 *White Belgian, Large. The roots are thick through, yielding a heavy crop. Reaches a length of 16 inches, and is grown only for stock feed. Pkt., 10 cts.; oz., 15 cts.; ¼ lb., 30 cts.; lb., \$1.00.

248 *St. Valery. Intermediate between the half long and long varieties. Will grow about 10 inches long with broad tops tapering to a point. Pkt., 10 cts.; oz., 15 cts.; ¼ lb., 40 cts.; lb., \$1.25.

Chervil

Cerfeuil, FR.

Perifollo, SP.

Kerbel, GER.

Culture—An easily grown and most useful vegetable. Curled Chervil may be sown in well prepared ground at any time during the spring. The rows should be about one foot apart and plants cultivated like parsley. The aromatic leaves are used for seasoning. **1 oz. to 100 foot row.**

296 Curled Chervil. Beautifully curled and crisp. Pkt., 10 cts.; oz., 25 cts.; ¼ lb., 75 cts.; lb., \$2.50.

*Chou-fleur, FR.
Coliflor, Sp.*

CAULIFLOWER

Blumenkohl, GER.

One ounce of seed will produce about 2000 plants.

CULTURE—For earliest Cauliflower, raise plants by sowing in hotbed or greenhouse during January or February, and transplant to flats or cold frames, 2 or 3 inches apart each way. Set in open ground as soon in spring as the land can be put in good order. Soil to be a warm, very rich, fibrous loam, well supplied with humus and moisture. Copious water applications during dry weather, especially when the plants are heading, and light dressings of nitrate of soda and potash are of much help. Set plants 2 to 2½ feet apart each way. When the heads are formed and hard, they should be blanched by drawing leaves together and tying with raffia or strips of cloth. For late Cauliflower to mature during the pickling season, start plants in open ground like late cabbages, and handle like that crop.

DRY WEATHER CAULIFLOWER

- 260 Early Snowball.** A very early variety, producing a magnificent head of snowy whiteness. Head is very compact, even and fine grained, forming very quickly and will keep in condition for a long time without showing discoloration. The outer leaves are erect tending to protect the young head from the hot sun. A most desirable strain of this fine vegetable, succeeding equally well either outdoors or in the hotbed. Pkt., 15 cts.; ¼ oz., \$1.00; ½ oz., \$1.75; oz., \$3.00.

Late Cauliflower

	Pkt.	¼ oz.	½ oz.	Oz.
255 Algiers	\$0 10	\$0 25	\$0 40	\$0 75
259 Half Early Paris	10	30	55	90
262 Veitch's Autumn Giant	10	25	40	75

Culture—Sow seed in early spring as for Carrots, in rows 12 to 16 inches apart, and thin the plants to 4 or 5 inches. **One ounce to 100 feet of drill.**

- 299 Large Rooted.** Used to mix with or as a substitute for coffee. Pkt., 10 cts.; oz., 20 cts.; ¼ lb., 50 cts.; lb., \$1.75.
- 300 Witloof Chicory, or French Endive.** We herewith give special cultural instructions for this fine salad.

- 257 Dreer's Selected Dwarf, Erfurt.** Suitable for either forcing or open ground. It produces a solid pure white medium sized head, of excellent quality and is one of the most reliable for the amateur. Pkt., 15 cts.; ¼ oz., \$1.00; ½ oz., \$1.75; oz., \$3.00.

- 256 Dry-weather or Danish Giant.** A fine variety of Cauliflower, especially adapted for growing in the open ground in sections subjected to long, dry seasons, as it will grow well and produce the finest heads in spite of the lack of moisture. The heads grow to a large size, are very solid, pure white and of delicious flavor. It is not suited for forcing or growing under glass, but it will prove valuable in the Southern States, where the climate is hot and dry. One of the safest sorts for the amateur to grow. Pkt., 20 cts.; ¼ oz., \$1.25; ½ oz., \$2.00; oz., \$3.50.

- 261 Dreer's Earliest Snowstorm, Super-Strain.** This has again been brought to the highest pitch of perfection by the careful reselection of plants by our seed growers in Denmark. It has now been tried by our customers in many sections; and the report is alike from each. "The best they ever grew." It is dwarf, with short outer leaves and can be planted close, 2 feet apart each way. It always makes a fine, large and exceedingly beautiful snowy white head, much earlier than any other variety, and is a sure prize-winner at Fair or Exhibition. Pkt., 25 cts.; ¼ oz., \$1.75; ½ oz., \$3.00; oz., \$5.50.

Cardoon

Cardon, FR.

Cardo, Sp.

Kardon, GER.

Culture—Sow seeds in open ground in early spring, directly where the crop is to mature. Have rows 3 to 4 feet apart, and plants standing 1 to 2 feet apart in the rows. Cardoon is sometimes grown in trenches in same manner as celery. The stalks must be bleached, like celery. The full-grown leaves are tied together, wrapped in straw, and banked up with earth. The stalks will become fit for use in 3 to 4 weeks. Never allow plants to suffer from lack of water, as stalks will turn hollow and pithy.

- 225 Large Smooth Solid.** A large variety with broad ribs. It grows about 4 feet high, and is almost free of spines. Pkt., 10 cts.; ½ oz., 20 cts.; oz., 35 cts.; ¼ lb., \$1.00.

Chicory

In late October, before frosts do damage, dig up roots which in good soil will grow to be 12 inches long by 3 in diameter at the crown. They somewhat resemble a well grown parsnip. Cut off the tops to within an inch of the crown of the plant. Trim roots at base so that altogether they do not exceed 8 inches in length. Secure a strong box 12 to 14 inches deep, laying it on the side and packing trimmed roots in it layer fashion. Turn right side up and fill in with soil or sand and place in the cellar.

Build up the sides of the box 6 or 8 inches and fill in with dry leaves, shavings, excelsior, or any other material of that sort. Water about once a week. Roots treated in this fashion about November 1st will yield beautiful creamy white sprouts of delicious salad in time for Christmas dinner. If when cutting care is taken not to cut into the crown, new shoots will be sent up throughout the winter. Pkt., 10 cts.; oz., 25 cts.; ¼ lb., 75 cts.; lb., \$2.25.

Vegetable Gardening (Watts). Covers every phase of the subject. \$2.50 postpaid.

*Celeri, Fr.***CELERY***Apio, Sp.
Sellerie, GER.***One ounce of seed will produce about 2000 plants.**

CULTURE—For an early supply, sow seeds of early or self-blanching varieties in flats any time during February. Celery seed is of rather stubborn germination and to insure an even germination the surface of the flats should be kept constantly moist. It is also advantageous to cover the seeds with sand rather than soil because sand will not grow hard or bake. When young seedlings are big enough to be handled, transplant them into other flats, 2 to 3 inches apart each way.

Harden gradually and by middle of April set out plants in the garden in rows 3 feet apart, plants 6 inches apart in the row. Cultivate freely and water abundantly. The plants should give you Celery beginning middle of October and up to Christmas time. For a later supply start seeds of winter keeping varieties in a hotbed about middle of March to April 1st. Transplant as suggested above for the earlier sorts and plant out into the garden about June 1st, setting the plants two feet apart because the later varieties are more vigorous growers. To blanch gradually hill up the stalks taking care, however, that no earth falls into the hearts and do not work over Celery while wet. Boards pushed up against the row of both sides will serve the purpose where limited quantities are grown. As cold weather approaches, hill more or mulch with straw or leaves which should be weighted down with more boards or soil. For winter storage dig up the plants with the roots and place upright in well protected frames or store in a cool cellar where they may be packed quite closely.

The Early Kinds

- 270 Easy Blanching.** A very select strain and easily the finest of any of this type. Useful both for early use and for keeping during winter. The plants make a quick, healthy growth to a large size and the stalks are thick, blanch pure white, very tender and brittle, with a rich flavor. Good keeper. This is a Pennsylvania grown stock grown specially for us and must not be confused with the cheaper Western seed. Pkt., 15 cts.; $\frac{1}{2}$ oz., 90 cts.; oz., \$1.70; $\frac{1}{4}$ lb., \$5.50.
- 274 Golden Plume.** (See Specialties, page 2.) Pkt., 25 cts.; $\frac{1}{4}$ oz., \$1.50; $\frac{1}{2}$ oz., \$2.75; oz., \$5.00.
- 278 Golden Self-blanching, Originator's.** (French-grown seed.) A splendid variety of early Celery, requiring but little labor or trouble to blanch. Plants grow to a medium size and make a stocky growth; heart is rich golden-yellow with light yellowish-green outer leaves. The quality is excellent, as the stalks are remarkably crisp, tender and good for early use. Pkt., 20 cts.; $\frac{1}{2}$ oz., 85 cts.; oz., \$1.50; $\frac{1}{4}$ lb., \$4.50.
- 276 Golden Self-blanching.** (American-grown seed.) An early dwarf sort, requiring but little labor to blanch. Heart rich golden yellow. Pkt., 10 cts.; $\frac{1}{2}$ oz., 35 cts.; oz., 60 cts.; $\frac{1}{4}$ lb., \$2.00.
- 284 Perfected White Plume.** Unsurpassed for fall and early winter use. As the plants grow to maturity the inner-stalks and leaves turn white, thus making very little earthing up necessary. Pkt., 10 cts.; $\frac{1}{2}$ oz., 25 cts.; oz., 40 cts.; $\frac{1}{4}$ lb., \$1.25.

EASY BLANCHING CELERY

The Winter Keepers

- 269 Emperor.** A very special strain of late keeping Celery for winter use. Of dwarf type averaging 18 inches in height, with thick white stalks and large, solid, pale yellow heart. Very crisp, with no stringiness, and of splendid flavor. Pkt., 10 cts.; $\frac{1}{2}$ oz., 30 cts.; oz., 60 cts.; $\frac{1}{4}$ lb., \$1.75.

EMPEROR CELERY

- 282 Giant Pascal.** Unquestionably the standard of excellence, but it requires rich soil. The stalks are very large, thick and blanch a creamy white, solid, crisp and of rich nutty flavor. Pkt., 10 cts.; $\frac{1}{2}$ oz., 20 cts.; oz., 35 cts.; $\frac{1}{4}$ lb., \$1.25.
- 280 Dreer's Monarch.** Does well in many soils and sections, hence a great favorite throughout the country. Stalks large with bright golden-yellow heart; solid and of delicious flavor and an easy sort to blanch. Pkt., 10 cts.; $\frac{1}{2}$ oz., 35 cts.; oz., 65 cts.; $\frac{1}{4}$ lb., \$2.00.
- 290 Winter Queen.** Grows thick, broad, pale green stalks with creamy-white heart, and keeps well. Pkt., 10 cts.; $\frac{1}{2}$ oz., 25 cts.; oz., 40 cts.; $\frac{1}{4}$ lb., \$1.25.
- 283 Soup or Flavoring Celery.** Sown thickly in rows, the young leaves are used for flavoring. The seed, also, is used for pickling, etc. Oz., 10 cts.; $\frac{1}{4}$ lb., 20 cts.; lb., 60 cts.

Celeriac (Turnip Rooted Celery)

Culture—Handled exactly like Celery described above, excepting that no blanching is necessary. Celeriac is grown for the root only, which, boiled until quite tender and served cold with a French dressing is a most delicious salad.

- 292 Apple-shaped.** Smooth round roots, solid and crisp. Pkt., 10 cts.; $\frac{1}{2}$ oz., 25 cts.; oz., 40 cts.; $\frac{1}{4}$ lb., \$1.00.
- 294 Giant Smooth Prague.** A very large and smooth variety, of fine crisp quality and strong celery flavor. Pkt., 10 cts.; $\frac{1}{2}$ oz., 25 cts.; oz., 40 cts.; $\frac{1}{4}$ lb., \$1.00.

Concombre, Fr.

CUCUMBER

Pepino, Sp.
Gurken, GER.

One ounce will plant fifty hills; two pounds will plant one acre.

CULTURE—For very early Cucumbers sow April 1st, in a hotbed upon pieces of sod (grass side down), so that they can be readily transplanted without disturbing the roots. When ground becomes warm, set the pieces of sod holding the seedlings, into well prepared hills, and protect with pots or glasses until hardened. When the weather has become settled and warm, sow seeds in hills 4 to 6 feet apart each way; thin out to four of the strongest plants to each hill, after all danger from insects is over. They succeed best in a warm, moist, rich, loamy soil. Continue planting at intervals for a succession. The Cucumbers should be gathered when large enough for use, whether required or not; if left to ripen on the vines, plants stop bearing. For pickles, plant them from June until the middle of July. The yellow striped cucumber beetle is the most serious insect enemy of the crop. Bordeaux Arsenate of Lead Mixture is by far the best remedy yet discovered. Dilute it with water, 3 ounces to the gallon, and spray it on the vines. Dusting the vines with Slug Shot also constitutes a simple but effective remedy.

Culture—Plants usually come up small and feebly. Sow seed in good clean loam, in drills 1 foot apart, and thin or transplant to 10 or 12 inches apart in the rows. May be blanched by covering with leaves or other loose litter, or by placing a large inverted flower pot over each plant.

- 401 Broad-leaved.** The Dandelion until recent years had been known only as a troublesome weed, but it has now been so greatly improved that it is now recognized as a most healthful early spring vegetable, eaten either raw as salad, or cooked and served like greens. Our strain of Broad-leaved Dandelion produces large bushy plants, with broad, succulent leaves of a slightly bitter flavor. Quality is considerably improved by blanching the plants, which can be done by covering them with leaves or other litter, although boarding up like celery or covering with inverted boxes will give better results. EXTRA CURLED CRESS

Aubergine, FR.
Berenjena, SP.

EGG PLANT

Eier pflanze, GER.

One ounce will produce about 1000 plants.

Culture—Egg Plant seed requires a higher temperature for germination than any other vegetable, and this temperature should be maintained right along in order to maintain strong and healthy growth. Sow the seeds in hotbeds, early in March. When 3 inches high, pot the young plants, using small pots, and plunge them in the same bed, so that the plants may become stocky. They can be planted out from the pots when the season becomes sufficiently warm, in May or June. The soil can hardly be made too rich. Set the plants in open ground, allowing 3 feet space between the rows, and 2 feet space between the plants in the row. Watch for the potato beetle. This pest, as well as blight, may be controlled by spraying with Bordeaux Arsenate of Lead Mixture or by dusting the plants with Slug Shot.

404 Early Black Beauty. Spineless, with rich purplish black skin; very attractive and of best quality. This beautiful Egg Plant is improved to the limit, but is exacting in its call for rich, warm soil. The plants are remarkably healthy in their growth and produce an abundance of large fruit, earlier than the New York Improved. The favorite sort for show purposes. Pkt., 15 cts.; $\frac{1}{2}$ oz., 40 cts.; oz., 70 cts.; $\frac{1}{4}$ lb., \$2.00.

407 New York Improved Large Purple. Produces the fruits in great quantities, plants averaging from 4 to 6 fruits each. They are large, nearly round, dark purple, free of thorns and of excellent quality. Pkt., 10 cts.; $\frac{1}{2}$ oz., 40 cts.; oz., 70 cts.; $\frac{1}{4}$ lb., \$2.00.

406 Early Long Purple. Earliest, hardiest and very productive. The fruits are long and of good quality, measure 6 to 10 inches long and best for very early use. Flavor is in the opinion of many, finer than the two large sorts offered above. Pkt., 10 cts.; $\frac{1}{2}$ oz., 40 cts.; oz., 70 cts.; $\frac{1}{4}$ lb., \$2.00.

Plants of Egg Plant are offered on page 196.

BLACK BEAUTY EGG PLANT

ENDIVE

Chicoer, FR.

Endibia o Escarola, SP.

Endivie, GER.

One ounce of seed to 200 feet of row.

CULTURE—Endive is one of the best and most wholesome salads for fall and winter use. Sow in shallow drills in April for early use or for late use in June or July. When 2 or 3 inches high transplant into good ground or thin out to 1 foot apart. When nearly full grown and before they are fit for the table they must be bleached. This is done by gathering the leaves together and tying with yarn or raffia to exclude the light and air from the inner leaves which must be done when quite dry or they will rot. Another method is to cover the plants with boards or slats. In three or four weeks they will be bleached. After a shower the boards must be taken off or the plants untied, to allow drying.

BROAD-LEAVED BATAVIAN ENDIVE

410 Broad-leaved Batavian (Escarolle). A favorite salad variety, with wide, wavy leaves edges of which are cut and irregular. Inner leaves blanch nicely to a creamy-white, tender, and of very agreeable flavor. Pkt., 10 cts.; oz., 25 cts.; $\frac{1}{4}$ lb., 65 cts.

412 Dreer's Giant Fringed. (See Specialties, page 2.) Pkt., 10 cts.; oz., 25 cts.; $\frac{1}{4}$ lb., 65 cts.

414 Green Curled Winter. Standard sort for fall and winter crop. Very hardy and vigorous. Easy to blanch. Pkt., 10 cts.; oz., 25 cts.; $\frac{1}{4}$ lb., 65 cts.

416 White Curled (Self-blanching). Plants 14 to 16 inches across, leaves pale green, finely cut, crisp and very tender. Pkt., 10 cts.; oz., 25 cts.; $\frac{1}{4}$ lb., 65 cts.

FINNOCCHIO or Florence Fennel

418 A vegetable which should be more widely grown. It is extensively used in Italy as a salad, but is particularly palatable when served boiled, with a cream dressing. When the enlargement of leaf stalk at base of stem is about the size of a hen's egg it should be earthed up so as to cover half of it, and in about ten days cutting for use may be commenced and continued as the plants grow. Pkt., 10 cts.; oz., 25 cts.; $\frac{1}{4}$ lb., 75 cts.

KALE, or BORECOLE

Chou Vert, FR. Bretón, SP. Blatterkohl, GER.

Culture—Excellent greens for winter and spring use and improved by frost. Sow from May to June, in drills about 1½ feet apart, and cultivate same as Cabbage. For early spring use, sow in September, and protect during winter. The varieties are so hardy that the green leaves may be dug out from under the snow in winter and used for greens. **One ounce of seed will produce about 3000 plants.**

- 422 Dreer's Imperial Long Standing. A beautifully curled sort, of vigorous spreading habit, hardy, attractive appearance, bright green color and very productive. Pkt., 10 cts.; oz., 20 cts.; ¼ lb., 60 cts.; lb., \$2.00.
- 420 Dwarf Green Curled. Leaves curled, brilliant green. Pkt., 10 cts.; oz., 15 cts.; ¼ lb., 50 cts.; lb., \$1.50.
- 424 Dwarf Curled Scotch. Leaves bright green, curled, very tender and fine flavored; an excellent sort. Pkt., 10 cts.; oz., 15 cts.; ¼ lb., 50 cts.; lb., \$1.50.
- 425 Sea Kale (Crambe Maritima). A perennial which should be grown and cultivated like rhubarb. Edible parts are the young, strong shoots that come up in early spring. When blanched, they are cooked and served like asparagus, or the leaves may be used as greens. Pkt., 10 cts.; ½ oz., 35 cts.; oz., 60 cts.; ¼ lb., \$2.00.

KOHL-RABI

Chou Rave, FR. Col de Nabo, SP. Kohl-Rabi, GER.

Culture—As early in the spring as the ground can be put in good garden condition, sow it in rows like Radishes, Carrots or any other root crops. Thin the seedlings to stand 4 inches apart in the row, allowing 18 to 24 inches between the rows. The product is ready for use when the bulbs average 2 to 2½ inches in diameter. The thick outer skin should be removed before boiling. Serve just like Turnips. **One ounce of seed will sow a drill of about 300 feet.**

- 427 Earliest Erfurt. A white, tender variety, with smooth root and very short top; the best variety for outdoor culture as well as excellent for hotbed or greenhouse culture. Pkt., 10 cts.; oz., 25 cts.; ¼ lb., 75 cts.

MUSSELBURGH LEEK

DREER'S IMPERIAL KALE

- 431 Early White (or Green) Vienna. Flesh white and tender, a standard sort for table use. Has a very short top and forms the root quickly. A most dependable variety on all soils. Pkt., 10 cts.; oz., 25 cts.; ¼ lb., 75 cts.
- 430 Early Purple Vienna. Skin purple, but flesh white and a good quality and flavor. As early as the white and more heat resistant, hence recommended for sections where turnips turn bitter. Pkt., 10 cts.; oz., 25 cts.; ¼ lb., 75 cts.

Poireau, FR. **LEEK** Puerro, SP. Lauch, GER.

Culture—For flavoring soups and salads. Sow in April in drills 1 foot apart, and when 6 to 8 inches high, transplant in rich soil, in rows 12 inches apart and 4 inches apart and draw the earth to them as they grow. - 433 Giant Carentan. Large thick stem, of mild flavor, and quite hardy. Pkt., 10 cts.; oz., 30 cts.; ¼ lb., \$1.00.
- 437 Musselburgh. Highly esteemed for exhibition. Pkt., 10 cts.; oz., 30 cts.; ¼ lb., \$1.00.

LETTUCE

Lechuga, SP.
Lattich, Salat, GER.

CULTURE—For the earliest supply sow seed of Loose-leaf and early Butterhead varieties under glass or indoors in boxes about March 1st. Sow thinly and when the young seedlings are three inches tall, transplant 3 to 4 inches apart each way in another seed flat or box. As soon as the ground can be put in good garden condition, these plants should be set out in rows 18 inches apart, the plants 4 to 6 inches apart in the row. For a succession sow seeds of Midseason Butterheads, Crispheads and Cos Lettuces right in the open ground around middle of April. All lettuces to head properly, must be thinned out to stand from 6 to 10 inches apart in the row. As the heads develop, every other one should be cut out to give the rest a chance to expand. During July, sow early Butterhead varieties, again for a fall supply. **One ounce will produce about 3000 plants.**

“Loose Leaf” Varieties

These do not form heads but large plants of loose leaves which are quite brittle and tender early in the season.

- 460 Grand Rapids Forcing.** A favorite early Lettuce for northern growing. It matures quickly and is of a large size, handsome appearance; crisp and tender. The leaves are bright green and crimped at the edge. Pkt., 10 cts.; oz., 25 cts.; $\frac{1}{4}$ lb., 70 cts.
- 442 Black-seeded Simpson.** One of the most popular loose-heading sorts and always dependable. Produces a compact mass of broad much crumpled leaves, light yellowish-green in color. Extra fine quality. Pkt., 10 cts.; oz., 25 cts.; $\frac{1}{4}$ lb., 70 cts.
- 452 Early Curled Simpson (Silesia).** One of the oldest, and quite familiar in American gardens. Forms a close, compact mass of light green crumpled leaves; excellent forcer. Pkt., 10 cts.; oz., 25 cts.; $\frac{1}{4}$ lb., 70 cts.

Very desirable for forcing and also for spring and fall outdoor planting. Of good quality, being crisp, tender and of fine flavor. Pkt., 10 cts.; oz., 25 cts.; $\frac{1}{4}$ lb., 70 cts.

UNRIVALED LETTUCE

- 468 May King.** Very early, and being hardy will stand considerable cold, damp weather. It can be planted out of doors or under glass, and in either case will produce fine, solid heads, very attractive, outer leaves being yellowish-green, tinged with brown, while inside it is rich golden-yellow. Pkt., 10 cts.; oz., 25 cts.; $\frac{1}{4}$ lb., 75 cts.

The Midseason Butterheads

For a continuous supply of high quality salads any of the following sorts should be sown at the same time as the earliest sorts and again 2 weeks later.

This type of Lettuce will usually succeed when, during hot weather nearly all other lettuces "shoot" seed stalks.

- 466 Kingsholm Cos.** Forms long, firm, upright plants with narrow leaves, which are crisp and refreshing, withstanding the summer heat. Light green in color and a very reliable variety for late use. Pkt., 10 cts.; oz., 25 cts.; $\frac{1}{4}$ lb., 75 cts.
- 473 Paris White Cos.** One of the best known. Plants erect, and tightly folded, leaves pale green and of good quality, which it retains for a long time. Pkt., 10 cts.; oz., 25 cts.; $\frac{1}{4}$ lb., 75 cts.

- 479 Trianon Cos.** Sown at the same time as the head Lettuces, this variety perfects compact, upright, tightly folded cones within sixty days of sowing the seeds. It folds of its own accord, no tying being required, and inside leaves bleach naturally to a most attractive greenish white. It is an ideal Lettuce for sowing again during June for use during August when regular head Lettuces will not form solid plants. Pkt., 10 cts.; oz., 25 cts.; $\frac{1}{4}$ lb., 75 cts.

Melon Musca, FR.

MUSKMELONS

*Melón, Sp.
Melone, GER.*

One ounce will plant about 50 hills; 6 to 8 lbs. in hills per acre.

CULTURE—Melons thrive best in a light, rich soil, and sunshine is essential for increasing the sugar content of the melons. When the ground has become thoroughly warm, generally after middle of May, sow seeds in hills 5 to 6 feet apart each way for Muskmelons, 8 to 10 feet for Watermelons. Melon vines are ravenous feeders and for best results, a few shovelfuls of well-rotted manure should be incorporated in each hill. Scatter 12 to 15 seeds on top of each hill and cover about $\frac{1}{4}$ inch deep. After all danger of bugs is over, thin out to three or four strongest plants per hill. Early and repeated spraying with Bordeaux Arsenate of Lead Mixture is always advisable for these crops.

DREER'S CHOICE ONION SEED

Zwiebel, GER.

One ounce of Onion seed for 100 feet of drill, 5 to 6 pounds for an acre.

CULTURE—Large Onions are easily grown from seeds in one season provided the gardener has a rich piece of ground and is willing to do the necessary hand weeding and transplanting of the young Onions. Seeds may be sown very early in the spring in rows 18 inches apart, and as soon as seedlings are 3 to 4 inches tall they should be thinned out to stand 3 to 4 inches apart in the row. Several applications of a complete fertilizer or wood ashes scattered on both sides of the row and hoed into the soil will benefit the developing roots immensely. Pull when tops begin to die down, cure and sell, or store in a cool, dry place. By sowing seed of the Spanish type, such as Prizetaker and Southport Globes, under glass in February or March, and transplanting in April to open ground 3 to 4 inches apart in the rows bulbs of immense size may be produced.

Best American Yellow Sorts

As a class the following may be termed the best general purpose onions for home and market purposes. Properly handled and stored they keep quite well and bring good prices.

- 568 Danvers, Yellow Globe.** Home gardeners throughout the country prefer this type to all others. Realizing the importance of getting a true to type strain, the bulbs from which our seed is grown are especially and carefully selected as to shape. It is the best paying Onion for general crop, being of a good size and a splendid keeper, while the flesh is very mild flavored. Pkt., 10 cts.; oz., 25 cts.; $\frac{1}{4}$ lb., 75 cts.; lb., \$2.25.
- 570 Gigantic Gibraltar.** On the order of "Prizetaker," it is of globe shape, with light straw colored skin and white flesh, which is mild and tender. This variety will produce onions averaging five inches in diameter and weighing up to 2 lbs., if seed is sown early under glass and young plants are transplanted in April. Pkt., 10 cts.; $\frac{1}{2}$ oz., 20 cts.; oz., 30 cts.; $\frac{1}{4}$ lb., 90 cts.; lb., \$2.75.
- 572 Ideal.** A handsome yellow Onion of medium size. The bulbs are true globe-shape, with skin of a pleasing yellow color, flesh white and mild and it is an excellent keeper. It is not the ordinary Southport Yellow Globe, but is superior, more productive, and we especially recommend it for the home garden. Pkt., 10 cts.; oz., 25 cts.; $\frac{1}{4}$ lb., 75 cts.; lb., \$2.25.
- 577 Philadelphia Yellow Dutch or Strasburg.** A very popular home garden onion. Flesh well flavored; bright straw-colored skin and somewhat flattened shape, and its excellent keeping qualities combine to make this a favorite sort. Pkt., 10 cts.; oz., 25 cts.; $\frac{1}{4}$ lb., 75 cts.; lb., \$2.25.

GIGANTIC GIBRALTAR ONION

- 578 Prizetaker.** (See Specialties, page 3.) Pkt., 10 cts.; $\frac{1}{2}$ oz., 20 cts.; oz., 30 cts.; $\frac{1}{4}$ lb., 85 cts.; lb., \$3.00.
- 586 Southport Yellow Globe.** A very large, handsome, globular-shaped yellow variety, very productive, of mild flavor. The outer skin is pale yellow, and the flesh creamy white. This is one of the latest to mature, requiring about 100 days to reach full size from time seeds are sown. Pkt., 10 cts.; oz., 25 cts.; $\frac{1}{4}$ lb., 75 cts.; lb., \$2.25.

The Leading White Sorts

White sorts are milder than yellow or red, but do not keep so well.

- 574 Mammoth Silver King.** The largest of the foreign varieties. Produces large bulbs within 120 days from seeds. Flat in shape and both skin and flesh are pure white, mild and well flavored. Pkt., 10 cts.; $\frac{1}{2}$ oz., 20 cts.; oz., 30 cts.; $\frac{1}{4}$ lb., 90 cts.; lb., \$2.75.
- 584 Southport White Globe.** A well known and popular standard sort of medium size, perfect globe shape, with pure white skin. Flesh is white, fine grained, and of fairly strong flavor. Late in ripening, and one of the best keepers among white sorts. Its handsome and attractive appearance keep it always in strong demand. Pkt., 10 cts.; $\frac{1}{2}$ oz., 20 cts.; oz., 30 cts.; $\frac{1}{4}$ lb., 90 cts.; lb., \$2.75.
- 588 White Bunching.** This forms no bulbs, and is grown solely for green onions or scallions. Seed is sown thickly in the rows, and makes rapid growth. The young plants should be gradually earthed up to blanch the stalk as far up as possible. Pkt., 10 cts.; $\frac{1}{2}$ oz., 20 cts.; oz., 30 cts.; $\frac{1}{4}$ lb., 90 cts.; lb., \$2.75.

- 590

White Portugal, or Silver Skin.

The bulbs are flat in shape, pure white and mature within 75 days after seeds are sown. It is a splendid variety for both family use and the market gardener, and is very largely used for growing sets on account of its fine shape when small, and also for its good keeping qualities. This variety is grown extensively for use in the green state as a bunching Onion besides being well adapted for pickling.

Pkt., 10 cts.; ½ oz., 25 cts.; oz., 35 cts.; ¼ lb., \$1.00; lb., \$3.00.
- 592

White Queen, or Barletta.

An early flat Onion, very mild, pure white, small in size and chiefly grown for pickling and bunching.

Pkt., 10 cts.; ½ oz., 20 cts.; oz., 30 cts.; ¼ lb., 90 cts.; lb., \$2.75.

Choice Onion Sets

For the small garden, we recommend the use of Onion Sets, and the slight difference in cost is justified by results. The risk of failure is almost eliminated and the crop is ready much earlier. Onion Sets should be planted in rows 12 inches apart, with sets 2 inches apart in the rows and receive regular cultivation. 1 quart will plant a 50 foot row.

Sow thickly early in April in rows 18 to 24 inches apart and ½-inch deep; thin out the plants to stand 6 inches apart in the rows. The seed germinates slowly, plants taking from three to four weeks to make their appearance, and sometimes failing to come up in dry weather. To insure prompt germination, soak the seed a few hours in warm water, or sprout in damp earth, and sow when it swells or bursts. For winter use protect in a frame or light cellar. **One ounce of seed for 150 feet of drill. Plants offered on page 196.**

Panaïs, FR.

PARSNIP

Chirivía, SP.
Pastinake, GER.

CULTURE—Sow as early in the spring as weather and soil conditions permit in drills 2 feet apart and cover $\frac{1}{2}$ inch deep in light soil, less in heavy clay. Thin to stand 4 to 6 inches apart in the rows. The roots are eaten boiled and are very sweet and tender, also are often used for flavoring soups and stews. The quality is improved by leaving them in ground over winter for spring use. Secure enough in pits or cellars in the fall for immediate needs. **One ounce will sow 200 feet of drill.**

608 Large Sugar, or Hollow Crown. This is the best and most productive variety and is largely grown both in the home garden and for market. The roots, which are creamy white, grow 10 to 12 inches long, and are smooth, tender, sweet and are of excellent flavor. Pkt., 10 cts.; oz., 20 cts.; $\frac{1}{4}$ lb., 45 cts.; lb., \$1.25.

GARDEN PEAS

Guisante, SP.
Erbsen, GER.**One pound will plant fifty feet of drill.**

Culture—The very earliest sowing of peas may be made as early in March as the gardener can prepare a piece of ground because subsequent frosts do not hurt the young plants, of the extra early smooth-seeded varieties. Sow in single or double rows 24 to 26 inches apart, covering seeds about 2 inches deep. All varieties do better with some sort of support. Where the brush is lacking, poles and twine may be utilized. By selecting varieties maturing in succession (and it is easy to pick them out from the following pages because they are listed in about the same order as they reach full size), a constant supply of delicious peas may be had from early in June until middle of August. Experience has proven that sowings made after middle of May are not as successful as the earlier ones because hot mid-summer heat is apt to cut short both vines and pods.

Smooth Seeded Extra Early Sorts

The hardest sorts, to be planted as soon as the soil can be put in condition.

- 618 Alaska.** An extra early round blue Pea, height, 2 feet. Very uniform and a favorite canning variety. Pkt., 10 cts.; $\frac{1}{2}$ lb., 25 cts.; lb., 35 cts.; 2 lbs., 65 cts.; 5 lbs., \$1.55, prepaid.
- 619 Ameer.** (See Specialties, page 3.) Pkt., 10 cts.; $\frac{1}{2}$ lb., 25 cts.; lb., 40 cts.; 2 lbs., 75 cts.; 5 lbs., \$1.75, prepaid.
- 635 Dreer's Eureka Extra Early.** One of the earliest and most prolific extra early varieties; which has given good results wherever grown. Vines grow to a height of about 20 inches and are very robust, bearing an abundant crop of pods which measure about $2\frac{1}{2}$ inches in length, and are well filled with peas of excellent flavor. Height, 20 inches. Pkt., 10 cts.; $\frac{1}{2}$ lb., 25 cts.; lb., 35 cts.; 2 lbs., 65 cts.; 5 lbs., \$1.55, prepaid.
- 630 Dreer's Electric Extra Early.** A highly prolific round, blue-seeded extra early sort. The vines grow very uniform and attain a height of $2\frac{1}{2}$ feet, bearing an abundant crop of medium size, dark green pods, which are well filled with Peas of good flavor. Radies, GER.*

One ounce of seed will sow 100 feet of drill.

SQUASH

*Calabaza, SP.
Kuerbis, GER.***One ounce of seed for 25 hills.**

Culture—It has only been recently that scientists have discovered the presence of remarkable quantities of vitamins in summer squash, and doctors now prescribe an abundance of squash for children backward in physical development. Sow at corn planting time, in well-manured hills, the bush varieties 4 feet apart each way, the winter sorts 10 to 12 feet each way, and thin out to 2 to 4 plants to the hill. To repel the squash vine borer, throw a handful of tobacco dust close around the plants. The large, strong-smelling black squash bug can be kept in check by hand-picking. For yellow-striped beetle and blight, spray early and repeatedly with Bordeaux Arsenate of Lead Mixture.

TOMATO

Tomate, Sp.
Liebesapfel, GER.

CULTURE—For the first crop sow seeds of very early varieties like Alpha, Avon Early, Red River or Earliana, under glass, or in the house, about middle of February, giving the young seedlings plenty of light for rapid development. When they are 3 to 4 inches tall transplant them into flats or a spent hotbed, to stand 4 inches apart each way. Give plenty of air on sunny days to harden them properly. Such plants should start bearing middle of June, and continue for the best part of 2 months. For the main crop, sow seeds of later varieties in a hotbed, or warm cold frame by April 1st. Around Decoration Day, prepare spaces 3 feet apart each way, digging the hole a foot deep and of equal diameter and filling this with well rotted stable manure or humus. Set the plants into these spaces and to prevent loss from cut worms surround the young plants with a collar of cardboard. Where the young plants are grown in paper pots, set them into the ground, pots and all, just tearing out the bottom. **One ounce of seed will produce about 2500 plants.**

BENT GRASS. For Fine Lawns

DREER'S PERMANENT PASTURE GRASS MIXTURE

An acreage of good grass land is an asset to any farm and a necessity where stock of any kind is raised. Land, too, is properly rested and fertility wonderfully renewed, so that eventually, when sod is plowed down, this rich land is in condition to return heavy crops, and another acreage can be prepared for grass. Permanent Pasture Grass succeeds well after a root crop, such as Potatoes, Beets, or Mangels or Turnips has been taken off. Land should be fall plowed and left rough over winter and prepared in spring, making the seed bed as fine as possible by repeated harrowing. After seed is sown a heavy rolling is necessary, as grass requires a firm seed bed. This special mixture of Re-cleaned Grass and Clover Seeds, is composed of Perennial varieties, which insure at all times an abundant and nutritious food supply for all kinds of stock. It yields a heavy crop of Hay each year and supplies rich pasture all the year round. We ship out large quantities of this mixture and it has always given most satisfactory results. **Sow 50 lbs. to the acre**, and when ordering, kindly state whether for heavy or light soil. **Bu. (20 lbs.), \$5.50; 100 lbs., \$25.00.**

Meconopsis Regia (New)

- 3137** A grand new species discovered in 1928 in Eastern Nepal, growing at a height of 14,000 feet. It may be described as a very handsome, robust, biennial plant, reaching under good cultivation anything from 3 to 5 feet in height. The winter condition of this species is particularly handsome. The long pale green leaves, often 15 inches in length, become covered with soft silvery hairs, forming a rosette well over 2 feet across, an ornament in itself and unmatched by any other species of *Meconopsis*. From the centre of this rosette there issues a central stem clothed with smaller leaves and much branched. In June the first flowers open and provide a display for several weeks. The color is a beautiful soft yellow, and on well-grown specimens the flowers are from 4 to 6 inches in diameter, enlivened by a cluster of orange stamens. Its great enemy is excessive wet during winter months. If this can be guarded against, there is no difficulty attending the cultivation of this fine new-comer. It has received all the honors that can be bestowed on a plant—both the Royal Horticultural Society's Award of Merit and the First-Class Certificate. Supply of seeds very limited. (See cut.) Pkt., 50 cts.; 3 pkts., \$1.25.

Double Sweet Scented Nasturtium Golden Gleam

The sensational seed novelty of 1932

- 3285** The plant forms a vigorous, large bush which throws out short runners, averaging eighteen inches. The flowers commence to come as soon as the plant nears complete development, and at the time it is in full bloom the entire plant, including the runners, is a blaze of color. The large, golden-yellow flowers average two and one-half to three inches across. They are borne on erect, stiff stems six inches in length. Consequently the flowers stand well above the foliage, an arrangement which adds immeasurably to the showy appearance of the plant.

When well grown these flowers have the appearance of a fully double flower, and are most attractive. An ordinary sized bouquet, when allowed to remain in a room for a short period of time will fill the room with fragrance. (See cut.) Pkt., 15 cts.; $\frac{1}{4}$ oz., 75 cts.

(For General List of Nasturtiums, see page 89.)

Twelve Choice Annuals for Rock Gardens

While the rockery is usually filled with Hardy Perennial plants, most of which take a year to produce flowering plants from time of sowing the seeds in the spring, there seems to be no good reason why the newly made rockery should not be filled with annuals the first season. These should be sown in April or May, and would produce a full crop of flowers within eight weeks or even less, from time of sowing, keeping the rockery gay until filled with the Hardy perennials.

3890 A collection of 12 packets of choice sorts for \$1.00.

Twelve Rock Garden Hardy Perennial Flower Seeds

There has developed within the last year or two a wonderful demand for Rock Gardens, and even in gardens of comparatively small size, space has been allotted to the Rock Garden. The collection is made up of such popular kinds as Golden Alyssum, Rock Cress, Columbine, Primula, Aubretia, and others equally desirable.

3551 Price for the complete collection of 12 packets, \$1.00.

Asters will thrive in any good soil, prepared in the same way as you would for a crop of vegetables. They should have an open, sunny position, and prefer a good, heavy, loamy soil, enriched with a liberal quantity of bone meal or other good commercial fertilizer; and the addition of wood ashes or air-slacked lime, and should not be grown on the same ground year after year; it must be changed each season.

The main essentials to insure fine Asters are a new rich soil, frequent cultivation, no check to their growth from start to finish and ample room to develop. When wanted for cutting with long stems, they should be set out not closer than twelve inches apart in the rows and two feet between the rows. When wanted for mass effects in beds they may be planted nine inches to a foot apart each way.

Asters are sometimes attacked by an aphid at their roots; also by stem rot. Both of these troubles are rarely met with if the plants are grown on new soil, and are not checked in their growth. The addition of wood ashes or air-slacked lime at the time of the preparation of the beds also helps to prevent these troubles.

CALLIOPSIS TINCTORIA SPLENDENS

Our Leaflet, "Hints on the Growing of Flowers from Seeds," will help you secure maximum results, Free on Request

Campanula Medium or Canterbury Bells

The seeds should be sown in finely prepared, rich soil—the colors in separate rows—and if the weather is dry, they should be given a thorough watering late every afternoon. The little plants should be transplanted early in October to the places where they are to bloom the following summer. Some evergreen branches, or a little straw or coarse hay, thrown over them when the ground begins to freeze makes all the winter covering these plants require.

Campanula Calycanthema

Cup and Saucer Canterbury Bells

This is unquestionably the finest type of this old-fashioned and much prized garden plant. They differ from the ordinary type in having an extra large calyx, which is of the same color as the flower, giving the appearance of a cup and saucer. They are effective either in the garden or grown in pots for conservatory or table decoration.

Carnation Chabaud's Enfant de Nice

Carnation Enfant de Nice is the result of a cross between Carnation Chabaud's Giant Improved and Carnation Perpetual. The plants are of robust, upright habit, with long, strong stalks bearing flowers $2\frac{1}{2}$ to 3 inches in diameter. This strain is magnificent and is so far, the last word in annual Carnations. The color comes about 75 per cent. true from seed and about 90 per cent. of the plants come double. See offering of separate colors and mixture on page 46.

Carnation Giant Marguerite

1830 The most popular Carnations with the amateur, as they begin flowering in a few weeks from time of sowing; 18 inches. An improved strain with flowers of extra large size in a splendid range of colors. Pkt., 10 cts.; $\frac{1}{4}$ oz., 60 cts.

(Hardy Garden Pinks see Dianthus on page 74.)

Candytuft (Iberis Umbellata)

All authorities agree on the great decorative value of this charming annual for beds, borders, rock gardens, etc., and the larger the mass the better the effect. The plants grow about 12 inches high and will succeed in any light, airy position. Seed may be sown any time during the spring. They bloom in about eight weeks from the time of sowing, and in order to keep up a succession of bloom two sowings should be made at intervals of about two weeks. For best results give each plant sufficient space for full development, not less than six inches apart and nine inches is better. While highly useful for cutting, lasting well, and used extensively for this purpose by many commercial florists, it is for their bright effect in the garden that they are mainly grown.

Beautiful summer and autumn blooming plants. They produce thousands of artistic flowers, furnishing an abundance of cut blooms for autumn decorations. Should be sown in Spring in the open ground, when danger of frost is past, or the seed may be started under cover and afterwards transplanted. Plant not less than 18 inches apart in rows or in masses in beds. When the plants are about a foot high the tops should be pinched out to induce a bushy growth. They prefer a rather light, not too rich soil, but do well almost anywhere. North of Philadelphia it is safer to use the early flowering type.

DIANTHUS OR PINKS

A magnificent genus, embracing some of the most popular flowers in cultivation, producing a great variety of brilliant colors and profusion of bloom. The varieties classed as annuals are really biennials, but are treated as annuals and may be sown out of doors when the danger from frost is past, and in a few weeks' time they are a mass of bloom, continuing so until after hard frost. As a rule, they survive the winter if given slight protection, flowering abundantly the following season. They grow about a foot high, and can be used in beds or borders of solid or mixed colors. The double flowering sorts are almost as fine as carnations for cutting. They are not particular as to soil, but should have a sunny location.

They make handsome beds or lines, and their free, graceful habit and bright colors are very effective when interspersed in the old-fashioned flower or shrubby border. They stand well when cut and a vase of one or mixed colors is indeed charming. 3 feet.

DREER'S SUPERB NASTURTIUMS

DREER'S PERFECT PANSIES

Pansies are too well known to require any description, as they are favorites with all. For best results you must start with a good strain. The finest Pansies are, as a rule, shy seeders, which accounts for the difference in the price of the various mixtures offered.

Pansy seed germinates and the plants grow more freely in the cool, early days of spring, and for summer-blooming should be sown by the latter part of April, or early in May, in the vicinity of Philadelphia. A soil containing a proportion of leaf mould, well enriched with well-decayed cow manure, will be the most satisfactory for the growing of this flower, and it should be well dug and made fine and level.

Sow the seed in drills, covering them not more than four times their diameter and firming the soil well above them. The seeds germinate in from eight to twelve days, and should not be allowed to dry out during this period. Covering the seed bed with newspapers will prevent this and hasten somewhat the period of germination.

As soon as the plants are up and large enough to handle, they should be thinned out or transplanted to stand nine inches apart in the rows. Thorough cultivation should be given from the start, as Pansies will not thrive when obliged to share the beds with a mass of weeds.

It is a mistake to plant Pansies in the shade of a tree or buildings. An open exposure, where the wind has a free sweep over the bed is far better, and Pansies so planted are free from the long, straggling branches which produce few and inferior flowers. During dry weather the bed should be watered daily.

POPPIES

Annual Poppies should be sown as early in the spring as possible where they are to remain, as they do not stand transplanting. Sow very thinly, preferably in cloudy weather or after a shower, barely cover the seed, press down firmly and they will come up in a few days. If they come up too thickly they must be thinned out to stand 3 to 4 inches or more apart if you wish best results. It is well to make several sowings at intervals to keep up a succession of bloom.

If picked just before expanding the flowers will last several days. It is also advisable to pick the old flowers as soon as fallen, which will lengthen the blooming season quite a while.

Plant, Root and Bulb Department

👉 PLEASE READ THIS BEFORE ORDERING PLANTS, ROOTS OR BULBS 👈

TIME OF SHIPMENT.—All plants, whether the stock is seasonable or not, are forwarded as soon after receipt of the order as possible. Many of our customers who have facilities for their care, purposely order plants out of season so as to have them on hand when planting conditions are favorable. As we do not know whether you have such facilities, you should specify on the order when you want shipment made, if you do not wish them at once.

RESERVATION OF PLANTS FOR PLANTING TIME.—While we try as far as possible to reserve plants on orders placed in advance, to be sent at planting time, it must be borne in mind that plants are highly perishable, and cannot be packed and stored for future shipment like most other kinds of merchandise. Weather conditions frequently interfere with making such reservations at the time the order is received, and when Spring opens there is usually such a congestion of orders for immediate shipment that it is impossible to make reservations. Customers may rely on us doing our utmost in making reservations, but if we fail we assume no responsibility, and all advance orders are accepted on these conditions only.

SAFE ARRIVAL GUARANTEED.—We guarantee the safe arrival of all goods sent by express or mail to points within the U. S. proper. If a package sent by express or mail is injured or lost we will replace it as soon as informed of the fact. Goods sent in any other way are solely at purchaser's risk. Claims for damages must be made on receipt of goods. We do not hold ourselves responsible for failure after delivery of the goods in good condition.

SHIPMENT BY STEAMBOAT.—Fast lines of steamboats connect Philadelphia with Baltimore, Boston, Jacksonville, Miami and Savannah. This forms a convenient, cheap and safe method of transportation, except during severe cold weather.

PLANTS BY RAILROAD FREIGHT.—Shrubs, Hedge Plants and other dormant stock can be forwarded safely by fast freight lines, even to distant points.

PACKING.—We make no charge for boxes or packing on Express, Freight or steamboat shipments. The extra labor of packing Parcel Post shipments is included in the additional 5, 10 and 15 per cent. cost as noted below.

HOW WE SHIP.—All Plants, Roots and Bulbs are forwarded by Express, purchaser paying charges. For those of our customers who prefer to receive their goods by Parcel Post, we will be pleased to forward in this manner such Plants, Roots and Bulbs as can be sent in this way at the following additional cost, to cover postage and special packing, which must be added to the value of each order for Plants, Roots or Bulbs:

5 per cent. additional to the following States:

Connecticut,	New Hampshire,	Rhode Island,
Delaware,	New Jersey,	Vermont,
District of Columbia,	New York,	Virginia,

DREER'S SELECT GLADIOLI

Gladioli hold an ever increasing interest, not alone for their rainbow splendor in border and garden, but even more for their value as satisfactory and long-lasting cut flowers. Nor is the cost at which all this beauty is spread great in either time or money, for their cultural requirements are of the simplest, and with a little care the number of bulbs may be vastly increased from season to season. No other garden flower gives so much and takes so little.

NINE NEWER GLADIOLI

We have chosen from the recent introductions of American and European growers, nine sorts of really outstanding quality; kinds that will please and surprise those familiar only with the older varieties.

Albatros. A new giant-flowered Gladiolus of purest glistening white without the faintest flushing of pink or ivory, not even a shadowed line in the the throat. An all-time white Gladiolus of unusual merit. 30 cts. each; \$2.75 per doz.; \$20.00 per 100.

Betty Nuthall. The Glory of the Garden, a sparkling iridescent orange pink deepening to coral on the petal reverse. The lower throat is golden orange, lined with carmine rose. The flowers are often more than six inches across and of splendid substance and placement. 15 cts. each; \$1.50 per doz.; \$10.00 per 100.

Coryphee. The clearest purest pink imaginable, no markings. The partly opened blossoms are like wax-petalled rose-buds. Large round flowers on tall graceful spikes. 20 cts. each; \$2.00 per doz.; \$12.50 per 100.

Joerg's White. Truly a giant in every way. Great creamy white flowers, deepening to ivory in the throat. A rugged sort, sure to bloom, and holding up well in even the hottest weather. 15 cts. each; \$1.50 per doz.; \$10.00 per 100.

Marmora. From Australia comes this stately large-flowered Gladiolus with its unusual lavender-gray coloring, the throat patched with glowing petunia purple. Cut it with Primrose Princess for contrast. 15 cts. each; \$1.50 per doz.; \$10.00 per 100.

Minuet. A beautiful clear light lavender, almost the shade of a Cattleya Orchid. A tall strong grower, with flowers of largest size and wonderful texture. It is the standard of perfection for lavender Gladioli. 15 cts. each; \$1.25 per doz.; \$8.00 per 100.

Pfitzer's Triumph. The gorgeous Amaryllis-like flowers are brilliant scarlet with salmon shadings, but deepening to cherry velvet in the throat. In both bloom and spike it is sensational, one of the very largest Gladioli ever introduced. 15 cts. each; \$1.25 per doz.; \$8.00 per 100.

Primrose Princess. Stately spikes carrying seven or more immense well-opened blooms. The lower petals are rich amber in color, the upper ones lightening to a clear delicate primrose. One of the loveliest of the yellow sorts, and possibly the largest flowering. 15 cts. each; \$1.25 per doz.; \$8.00 per 100.

Veilchenblau. A large flowered Gladiolus of richest Iris blue coloring. An exceptionally sturdy vigorous grower, making tall robust spikes fully filled with rugged bloom. 20 cts. each; \$1.75 per doz.; \$11.00 per 100.

PRIMULINUS HYBRID GLADIOLI

A graceful and interesting class of hybrid Gladioli with dainty color blendings that show to particular advantage when cut, but they also make a most effective display in garden or border. They seem to delight in hot dry weather and are always sure to bloom. GOLD MEDAL GLADIOLUS BLENDS

These splendid blends are made up only from the finer named sorts, including many high-priced kinds, each variety grown separately, and the whole carefully blended to give a proper proportion of the various colors. We do not handle Gladioli that have been grown in mixture, for we find that certain sorts propagate much faster than do others and such mixtures soon become unbalanced. Our Gold Medal Blends contain only sturdy, large-flowering varieties, and the wide range of exquisite colorings will please the most exacting.

Gold Medal Section No. 1. For this we have chosen from a wide range of varieties in the warmer colorings, scarlet, bright red, crimson, garnet, maroon and amaranth; together with certain of the deeper shades of tyrian rose. Only large flowered sorts of highest quality in form and flower, have been used to build this blend. 6 for 30 cts.; 55 cts. per doz.; \$2.75 per 100; \$25.00 per 1000.

Gold Medal Section No. 2. Here we offer the lighter colors, white, cream, yellow and many delicate shades of pink, salmon and rose; a section particularly valuable for cutting or for decorative garden planting. 6 for 30 cts.; 55 cts. per doz.; \$2.75 per 100; \$30.00 per 1000.

Gold Medal Section No. 3. In this group we place the dainty blue and lavender Gladioli; varieties with colorings of mauve, lilac, amethyst and deep blue. With these we have included many of the richer violet, velvety purple and heliotrope sorts, the whole giving a range of tints and shades that has been aptly described by one of our customers as "pansy colors." 6 for 40 cts.; 70 cts. per doz.; \$4.00 per 100; \$35.00 per 1000.

Gold Medal Blend. Named sorts carefully blended to secure a proper balance of the various hues, covering the full range of Gladiolus colorings in a marvelous diversity of tints, shades and markings. No finer mixture could possibly be offered. 6 for 30 cts.; 55 cts. per doz.; \$2.75 per 100; \$25.00 per 1000.

"The Gladiolus" (Beal). An interesting book covering culture and propagation. \$1.25, postpaid

Andreas Hofer. A lovely narrow petaled Cactus of ideal form and soft tender coloring. A most delicate shade of pink with salmon suffusion passing to a creamy-white center. Its stiff wiry long stems and free habit of bloom make it invaluable for cut flowers as well as for garden decoration. 50 cts. each.

California Beauty. Probably the nearest approach to a pure copper, a flower of excellent form and dainty appearance produced most prolifically on long stiff wiry stem; a gem in the garden and a splendid cut flower. 50 cts. each.

Cigarette. Creamy white, heavily edged with pomegranate red, but it varies greatly, no two flowers being exactly alike. The petals are long and inclined to roll, forming a large, deep, well-shaped flower of great substance on very long stems of best quality. 25 cts. each.

Elsie Daniels. Very soft lavender-pink shading to pearly-white at center, long, more or less wavy petals forming a most perfect shaped large flower on excellent stem. 35 cts. each.

Lolita Velasco. There are many good white Cactus Dahlias and all of them have some distinctive merit of their own. We should hesitate to designate any one of them as the best white on all points, but if we had to select one individual sort, we would take this splendid variety. 50 cts. each.

Mariposa. A perfectly formed Hybrid Cactus composed of long narrow incurved petals which curl and twist so as to baffle an artist. A delightful shade of true pink which is intensified by a deeper center a faint violet suffusion adds to the effect. 35 cts. each.

DREER'S SPECIALLY PREPARED ROSES FOR THE GARDEN

While our old customers are familiar with the high grade of Roses which we send out, we wish to direct the attention of those who have never planted our stock, to the manner in which these plants are prepared. All our Roses are strong two-year-old, field-grown, budded or grafted plants and in fall are carefully dug, planted in pots and stored in cold greenhouses or cold frames, where artificial heat is used only to exclude the most severe frost. During the latter part of March or before the first of April, these potted plants are moved to beds in the open air where they receive no further protection. Under this treatment the plants develop in a natural way and are not only superior to stock which has been developed into full growth under glass, but also better for spring planting, than plants which have been carried in cellars or in cold storage, under any method known to us.

REDUCED PRICES. The price of practically all of the Roses offered on the following pages has been reduced in line with the present lower cost of production. Quality has not been sacrificed to meet the competition of the many low price offers which are being broadcast. The stock we offer is the best that it is possible to produce and which, with reasonable handling by the planter, will give results. We do not offer dormant plants for delivery after April 10th as we know from many years' experience that such stock planted after the middle of April, under ordinary seasonable weather, will rarely give satisfactory results; normal weather conditions at that time of the year, with their high temperatures, cause such plants to start quickly at the tops without the necessary root action, with the result that but few ever produce satisfactory plants, if they live at all.

FREE DELIVERY. Orders placed with us for dormant Roses for delivery on or before April 10th, will be delivered charges prepaid to any address in the United States. For planting after April 10th we cannot recommend dormant plants and orders received after that date will be filled with potted stock as described above, on which the buyer pays transportation charges.

THE
NEW DAWN

New Hardy Everblooming Climbing Roses THE NEW DAWN THE EVERBLOOMING DR. W. VAN FLEET

The First Plant Patented Under the
United States Patent Laws.

A counterpart of the beautiful, popular, flesh-pink Rose Dr. W. Van Fleet, excepting that it is perpetual flowering throughout the season.

Patent Number 1, the first patent issued August 18, 1931, under the new Patent Law has been granted to the originators of The New Dawn Rose, giving them the sole rights for the propagation of this desirable new variety.

This new Rose is a sport from Dr. Van Fleet which is universally acknowledged as the best and most popular American Climbing Rose. This new variety is identical in every way with its parent in size and formation of its long pointed flesh pink buds and double flowers, but blooms continuously throughout the summer and fall months. Really the first worth while Hardy Everblooming Climber introduced. We have distributed many thousands of

this everblooming gem since its first introduction in the spring of 1931. A large stock of plants enables us to offer it now at the reduced price of \$1.50 each.

CLIMBING ROSE, BLAZE, THE NEW HARDY EVERBLOOM- ING SCARLET AWARDED UNITED STATES PLANT PATENT NO. 10

A marvelous new hardy climbing Rose which inherits the blazing color of Paul's Scarlet Climber and the everblooming habit of Gruss an Teplitz, thus combining the most attractive features of both of its parents. It is a very vigorous climbing variety which will grow to considerable height and produce flowers on both the old and new growth. A Rose that is destined to enormous popularity. Strong two-year-old plants, \$2.00 each.

One of the late Mr. Pernet-Ducher's seedlings that did not develop its bloom until after this great rosarian passed away in 1929. It was shown in France under the name of Mme. Raymond Gaujard but is now known as Olympiad. The above illustration gives a fair representation of its brilliancy in color as well as of the beautiful formation of its buds and flowers.

Awarded Gold Medals at the Great Atlantic City Flower and Garden Pageant, September 1931, at the Philadelphia Flower Show, March 1932, at the International Flower Show at New York in 1932 as well as at the Bagatelle Trial Gardens in France in 1931. Dreer's Select Gloxinias

The Gloxinia ought to be one of our common plants because of its great beauty, the profusion of its flowers and its summer blooming habit. But it is not common, by any means, and this fact is attributable almost entirely to the impression that prevails to a great extent that it is a very difficult plant to grow, such is not the case, however, if one goes at it in the right way.

Full cultural directions are given in our book, "Dreer's Hints on the Growing of Bulbs." Price, 25 cts., or free if asked for at time of ordering.

Separate Colors. Blue, red, white and tigered or spotted. 35 cts. each; \$3.50 per doz.

DREER'S SELECT Hardy Perennial Plants

A HARDY PERENNIAL BORDER

The growing popularity of the **Old-fashioned Hardy Garden Flowers**, the inhabitants of the perennial garden, is not at all surprising when we consider the many varied and pleasant changes which take place throughout the entire growing season in a well-arranged hardy border, in which every week—yes, every day—brings forth something fresh and new to interest and delight even the most critical. Beginning in April, the early-flowering varieties open their flowers often before the snow has entirely disappeared, and continue, with constant changing variety, throughout the summer until late in the fall when only severe freezing weather will stop such persistent late-blooming kinds as Japanese Anemones, Pompon Chrysanthemums, Gaillardias, Eupatoriums, Tritomas, etc.

Many not thoroughly familiar with this class of plants have an idea that nothing but a large field-grown clump will give satisfactory returns the first season. This, as experience has taught us, is in most instances a mistake. A vigorous plant of proper size will, in nearly every case, give quicker and better returns than the best so-called "field clumps." The majority of the stock offered in this catalogue is pot-grown. This does not mean that the plants have been altogether pot-grown, but that they have been field-grown and dug and potted up during the fall months, and such stock can be planted, even late in the spring with practically no loss, which, in the case of clumps, is often quite serious.

**We have prepared a leaflet on
THE MAKING AND CARE OF AN OLD-FASHIONED HARDY BORDER

We also offer several good books on the culture of Hardy Perennials, a list of which will be found on page 44 of this catalogue.

DREER'S COLLECTIONS OF HARDY PERENNIAL PLANTS

The list of Hardy Perennial Plants which we offer in our Garden Book is admitted to be one of the most complete and up-to-date collections in the country, and we are continually adding all the new, rare and desirable sorts.

While we are not in the landscape business and cannot undertake the preparation of plans for planting or laying out of grounds we have had prepared by a competent landscape architect a series of **Plans of Hardy Borders** with a list of suitable plants for positions either in sun or shade. Also a list of plants suitable for Rock Gardens with general advice on the construction and care of same. We shall be pleased to send this leaflet free on application. We also offer customers who are not acquainted with the different sorts the following collections, all in good, strong roots, which when once planted will, with little care, keep the garden and Rock Garden gay with flowers from the time the frost leaves the ground until late in autumn. These collections are made up of species and varieties strictly of our selection, and we are unable to submit list of contents, as the assortment varies at different periods during the planting season.

DREER'S CHOICE GARDEN CHRYSANTHEMUMS

These are universally popular for outdoor bedding, and considering their many good qualities, there is no cause for surprise to see them cultivated so extensively. They produce a lavish profusion of blooms, giving color, life and beauty to the garden just at a time when other plants have been destroyed by frost and are looking their worst. Frost does not materially affect the flowering, and it frequently happens that an armful of flowers can be cut late in November. They are reasonably hardy if planted in a well-drained position, with a covering of leaves or loose litter during the winter, or may be carried over with perfect safety in a cold frame.

Dreer's Japanese Anemones (Anemone Japonica)

See illustration on page opposite.

These beautiful Windflowers, three of which are shown on the plate opposite, are one of the most important hardy plants. While they begin blooming in August, they are more especially valuable on account of their continuing in full beauty until cut down by hard frost. All are excellent for cutting, lasting in good condition for many days. The plants grow 2 to 3 feet high, are perfectly hardy if given the protection of 2 or 3 inches of leaves or litter during the winter, and, while they respond freely to liberal feeding, they will succeed in any ordinary garden soil, increasing in beauty from year to year. They can be used in solid beds or borders or clumps planted through the hardy border, which they brighten during the late fall months.

Aquilegias, or Columbines

The Columbines are among the most elegant and beautiful hardy plants, producing their graceful spurred flowers on stems rising 2 feet or more above the beautifully divided foliage, and should be planted wherever their presence will serve to lighten up a too stiff and formal planting, for no other plant has so airy a grace as the Columbine, is more generous of its blooms, or more effectively adapted for cut flowers.

They are not at all particular as to soil or location although they prefer a sandy loam and a moist but well drained sunny position, and usually make themselves at home in any hardy border or rockery. Their period of flowering covers the late spring and early summer months. Taken as a whole, they are a most important part of the hardy garden, and should be grown in quantity by every lover of old-fashioned garden flowers.

HARDY ASTER, QUEEN MARY

Hardy Aster

Frikarti (*Wonder of Stafu*). We consider this the best of the hardy, late summer and fall flowering varieties yet introduced. Japanese Hardy Aster

Mauve Cushion. An entirely distinct species. Summer-flowering Hardy Aster

Amellus Elegans. Grows from 12 to 15 inches high and produces large showy flowers of a rich bluish-violet during July and August. Its free-flowering habit and compact growth make it a most desirable subject for the front of the border. 25 cts. each; \$2.50 per doz.; \$15.00 per 100.

Fall-flowering Hardy Asters (Michaelmas Daisies, or Starworts)

These are among the showiest of our late-flowering hardy plants, giving a wealth of bloom during September and October, a season when most other hardy flowers are past, and for the best effect should be planted in masses of one color. Novi belgii Climax. One of the best and showiest, with large pyramidal spikes of large lavender-blue flowers; 5 feet.

Sam Banham. Large pure white, one of the earliest; 3 feet.

Tataricus. Distinct large bluish-violet; very late; 6 feet.

The Hollyhock requires a deeply dug, well-drained soil, enriched with thoroughly decayed manure, and should be liberally supplied with water during dry weather. A slight protection throughout the winter will be beneficial. An occasional spraying with Bordeaux mixture, which should be applied early in the growing season, usually prevents the disease, which is prevalent in some localities. Dreer's Fragrant Peonies

DOUBLE HERBACEOUS PEONY

The wonderfully improved Peonies are truly the "Queens of Spring Flowers," and are well adapted for massing in beds, and particularly valuable for planting in groups throughout the perennial or shrubby border, where their brilliant hues add attraction to all around. Their requirements are so simple—a good rich, deep soil, and an open sunny position which, however, is not absolutely necessary, as they thrive almost equally as well in a partly shaded position, and a liberal supply of water during their growing season being sufficient to give an abundance and wealth of flowers, which rival the finest Roses in coloring and fragrance, and produce during their flowering season a gorgeous effect not equaled by any other flower. They are perfectly hardy, requiring no protection whatever, even in the most severe climate, and once planted increase in beauty each year.

An important point to observe in the planting of Herbaceous Peonies is not to plant too deep. The roots should be placed so that the crowns are covered with two inches of soil.

DREER'S CHOICE HARDY SHRUBS

NOTE—Shrubs will be shipped on receipt of orders, or as soon as they can be dug, unless instructed to the contrary, but no orders can be accepted for delivery later than May 1, and they can only be sent by Freight or Express, at purchaser's expense. They are too heavy and large to be sent by mail. No charge for boxes, packing or delivery to express, freight or steamship lines in Philadelphia.

Shrubs are as much a part of the well balanced garden as the lawn or flower borders. Many of them are as decorative as any ornamental foliage plant, while others are highly useful as cut flowers, and a well-arranged planting presents an attractive appearance throughout the entire year.

Shrubs have many uses; such as a dividing line between the flower and the vegetable garden, or between the lawn and uncultivated land beyond; as a background to a flower border; for hiding an unsightly building, fence or foundation, or they may be planted in a mixed shrubbery border, in which case those of short, dense growth should be planted along the front of the border, graduating to the tall-growing kinds at the back.

Fish will not thrive unless enough plants are growing to furnish them with oxygen. To do this there should be not less than one plant to every two gallons of water. The ideal temperature is about 50 degrees, and a shady corner, or a window facing north, is best during the summer, and an east window during the winter.

CHOICE EVERGREENS

The Coniferous Evergreens are indispensable in all ornamental plantings. They impart a finish to the landscape by their quaint or symmetrical growth, and whether planted as single specimens on the lawn or grouped together in masses, or for foundation planting, the light green, golden or silver-blue colors of their foliage are beautiful, winter and summer alike. We offer below a short but select list of the hardiest and easiest grown varieties:

Juniperus Virginiana Glauca (*Silver Red Cedar*). Similar to Virginiana, but beautiful steel blue color. Plants offered are grafted from the original strain and are sure to please; attains best perfection when sheared frequently. Plants 2 to 3 feet high, \$2.50 each.

— **Squamata Meyeri** (*Meyer's Juniper*). A newer Evergreen of conspicuous merit. Beautiful deep blue foliage combined with rather irregular and slow growth makes this Evergreen particularly suited to the rockery or low foreground planting. Plants 18 to 24 inches high, \$2.50 each.

Picea Excelsa (*Norway Spruce*). Rapid in growth, this tree is excellent for wind breaks or hedges. It attained its first popularity as the Christmas tree of Europe. Plants 18 to 24 inches high, \$1.00 each.

— **Pungens Glauca Kosteri** (*Koster's Colorado Blue Spruce*). The attractive silvery-blue color stands out strongly against all other Evergreens. Plants 18 to 24 inches high, \$5.00 each; 24 to 30 inches high, \$7.50 each.

Pinus Montana Mughus (*Dwarf Mugho Pine*). Compact dwarf pine, forming a round topped clump; useful for rock planting and foundation work. Its shape was produced by growing for countless ages on the timberline where bleak exposure and snows developed a low compact rugged plant. Plants 15 to 18 inches high, \$1.50 each.

— **Nigra Austriaca** (*Austrian Pine*). A vigorous growing pine of dense habit, good for background or as individual specimen; thrives at the seashore. Plants 2 to 3 feet high, \$2.00 each.

— **Resinosa** (*Red Pine*). The Red Pine succeeds well in poor soil and is of rapid growth producing a nice shaped tree. Plants 2 to 3 feet high, \$2.00 each.

Taxus Baccata Repandens (*Spreading English Yew*). A low growing form with wide spreading branches. Leaves dark blue green. Valuable for low planting. Plants 15 to 18 inches high, \$1.50 each.

— **Cuspidata** (*Spreading Japanese Yew*). Unquestionably one of the hardiest Evergreens in commerce with very dark green foliage and spreading bushy habit; valuable for foundation planting and especially adapted for wind swept locations because of its hardness. Plants 18 to 24 inches high, \$1.50 each.

EVERBEARING STRAWBERRIES

Two Luscious Hardy Grapes

The Caco. A cross between Catawba and Concord, which has inherited the best characteristics of both parents developing a luscious fruit which ranks close to the greenhouse grown product in high quality and melting texture. In appearance it is one of the most beautiful of all hardy grapes, berries large, wine-red with abundant bloom carried in large compact bunches. It ripens in advance of Concord and is a strong vigorous grower.

Champagne. A variety that is being extensively grown in the grape growing districts of New Jersey and which has special merit not only in the quality of its fruit but is also an exceptionally strong grower and very prolific bearer. Its berries are of large size, coppery-red in color and of delicious flavor. We can supply strong two-year-old plants of either of the above sorts, 60 cts. each; \$6.00 per doz.; \$40.00 per 100.

Agricultural Seeds, Implements, Fertilizers and other heavy and bulky goods are sent by Express or Freight at purchaser's expense. **LOCAL DELIVERY.**—We delivery goods free in Philadelphia.

All Plants, Roots and Bulbs are forwarded by Express, purchaser paying charges. For those of our customers who prefer to receive their goods by Parcel Post, we will be pleased to forward in this manner such Plants, Roots and Bulbs as can be sent in this way at the additional cost as noted on page 111 and on order blank which must be added to the value of each order for Plants, Roots or Bulbs. Special instructions regarding the forwarding of plants will be found on page 111.

CANADIAN SHIPMENTS.—Flower Seeds and Vegetable Seeds (except Beans, Corn and Peas) are sent postpaid. All other goods are sent by Express or Freight, purchaser paying all charges. Patrons who wish to purchase Plants or Bulbs must secure a permit from the Department of Agriculture, Ottawa.

PACKING.—No charge is made for boxes or packing on Express or Freight shipments nor for Delivery to Freight Depot or Express Offices in Philadelphia.

If a package sent by Express or Mail is injured or lost we will replace it as soon as informed of the fact. Goods sent in any other way are solely at purchaser's risk. Frequently it happens that orders never reach us or are without signature. When customers fail to receive their packages in a reasonable time they should inform us, and at the same time send a copy of order and any other information necessary to trace the goods. Claims for damage must be made on receipt of goods. We do not hold ourselves responsible for failures after delivery of the goods in good condition. **PLEASE KEEP A COPY OF YOUR ORDER FOR CHECKING DELIVERY.**

REMITTANCES should be made by Post Office Money Order, Drafts on Philadelphia or New York Banks, or Express Money Orders. We disclaim all responsibility when remittances are not made as above directed. Where it is not possible to obtain these, the letters should be registered. Coin should not be sent by mail.

CASH WITH ORDER.—Please send money with the order sufficient to cover the whole bill. We decline sending goods C. O. D.

NAME AND ADDRESS.—Please remember to write on each order your **NAME, POST OFFICE, COUNTY and STATE;** also give number of street or P. O. Box as distinctly as possible; also the **NEAREST EXPRESS OFFICE.**

NON-WARRANTY.—Most of the failures with seeds, plants and bulbs are due to causes entirely beyond our control, such as unfavorable weather or soil conditions, too deep or too shallow planting, etc., which renders it impossible for us to guarantee success, and although we take all possible care to supply only such goods as will, under proper conditions, produce satisfactory results, we still give no warranty as to description, quality or productiveness of any of the seeds, plants or bulbs we send out, and will not be in any way responsible for the crop, and every order for articles named in this catalogue will be executed on these conditions only. It must, however, be plain to every one who gives the matter the slightest thought that it is to our best interests to send out only such stock as will not only grow, but prove true to name and description.

CORRESPONDENCE.—We try to give prompt attention to all proper letters of inquiry, etc. We ask, as a favor, that all questions be stated clearly and briefly, and not on order sheets.

Lawn Mowers and Accessories

The best mower is the cheapest in the end

A lawn mower is not merely so many pounds of wood and metal; it is so many years of efficient, trouble-free grass-cutting. One mower, for instance, might give you twenty or more years of such service, whereas another might give you only two or three. So, it is clear that the best lawn mower, fairly priced, is *always* cheapest in the end.

The Dreer Mower is nationally known as a quality machine. It is designed throughout to make grass-cutting easier, quicker, better. And it is built only of materials that will enable it to give many years of efficient service at a minimum cost for maintenance and repairs.

The Ambassador Mower

Constructed with 10-inch drive wheels. 16-inch cut only, \$12.00.

"DREER" LAWN MOWER

Equipped with five extra wide blades of crucible steel, oil hardened and water tempered. Bottom knife of tempered crucible tool steel has a raised edge over which the blades of the revolving cylinder must pass. As a result, the grass is actually *cut* and not merely crushed or torn. A triple set of gears on each side results in an extra long wheel base, which insures a smooth, velvety cut on uneven as well as even surfaces.

The Dreer Mower is *actually* self-sharpening, and is adjustable to cut as close as one quarter of an inch from the ground or as high as 1 1/2 inches and will mow grass five inches high. Made both in high wheel and low wheel types.

Lawn Cleaners

The Pennsylvania Lawn Cleaner will remove from the lawn not only the cut grass, but all sorts of litter, leaves and trash.

The suction created by the three rapidly revolving brushes (or rakes) cleans the lawn on the same principle as the vacuum cleaner operates on carpet. It is easy to operate, and with it one man will do more and better work than four men with hand rakes.

The brushes are recommended for removing worm-casts from putting greens and tennis courts where a smooth surface is essential.

Always specify "Rakes" or "Brushes" when ordering.

Extra brushes or rakes, per set of three, \$7.50.

PENNSYLVANIA LAWN CLEANER

“I’m about ready to give up-- What CAN I Do to Restore My Lawn?”

That question, asked us by a resident of a metropolitan suburb, was typical of many inquiries we received last summer from discouraged lawn owners.

"My garden is more beautiful than ever," one woman wrote, "but, what with bare spots and brown spots and crab grass, the lawn is a fright. Against the attractive background of the garden, it reminds me of a worn rag rug on the floor of a tastefully furnished drawing room!"

It is only too true that, as a result of the serious drought of 1930 and the subsequent lesser droughts in many sections, lawns generally have not fared very well during the past two years. Yet it was significant that many of those who wrote us last year insisted they had tried everything—yes, every-thing!—excepting only grass seed of known quality and dependability!

Grass seed, you know, isn't merely a product of Nature. It is also a product of selection and

cleaning, as well as of experience and integrity. For instance, Dreer's Celebrated Lawn Grass Seed mixtures never contain any cheap annuals, such as Timothy, that give quick but temporary results. And they never contain a large percentage of worthless chaff, which, in some grass seeds, sold principally on "price," runs as high as 50 per cent!

Furthermore, Dreer's lawn mixtures are noted for their adaptability to many variations in soil, climate and other conditions. That is why they have given such uniformly excellent results in every section of the country—on home lawns and private estates, as well as on the grounds of many leading country clubs, athletic clubs, schools and other institutions.

This year try re-sowing your lawn with one of Dreer's Lawn Grass Seed mixtures—the finest, recleaned, new-crop grass seed that money can buy, at a cost no greater than that charged by other houses.
