Dreer's New Improved
Extra-Heavy Lawn Mixtures

Weigh 25 Pounds per Measured Bushel

Your lawn represents the most important single feature toward the beauty of your home grounds. It deserves your most careful consideration as its beauty and permanence depend primarily upon the quality of the seed sown. You can rely upon Dreer's New Improved Lawn Mixtures to give you first class results. Sow 1 quart to every 200 square feet, 6 bushels per acre.

"The Dreer" Lawn Grass
An Unequalled Mixture for a Beautiful Lawn

"The Dreer" Lawn Grass produces a smooth rich green sod of finest texture altogether free from grasses which are inclined to produce clumps or knots. Such a lawn is bound to enhance your home grounds providing a rich green setting that cannot be achieved in any other way. All grasses included in this superb mixture are permanent, fine-bladed, and of a rich green color. They are strictly lawn grasses. The strong fibrous roots of certain ones take hold of the soil and contribute toward the permanence of the sod. Other grasses, particularly Bent grass, are of creeping habit. They are most essential because they quickly cover the entire surface and weave the sod into a carpet of rich green. Still others help the density and protect the lawn against heavy wear. Those who realize the tremendous importance of a first class lawn will choose "The Dreer" in preference to all others. Pt. 30c; qt. 50c; 2 qts. 90c; 4 qts. $1.70; peck $3.75; 1 bu. (12 lbs.) $6.25; bu. (25 lbs.) $12.00; 100 lbs. $47.00, transportation paid.

Dreer's "Evergreen"
A High Grade Mixture

Though less expensive than "The Dreer" Lawn Grass this superb mixture produces a beautiful and permanent lawn. It is made according to our own special formula and is composed of choice grasses which will produce a lawn of rich green color and velvety appearance. It is composed entirely of choice, thoroughly re-cleaned grasses which accounts for the heavy bushel weight—a feature that insures a good heavy stand from the very beginning. Pt. 25c; qt. 40c; 2 qts. 75c; 4 qts. $1.30; peck $2.50; 1 bu. (12 lbs.) $4.90; bu. (25 lbs.) $9.50; 100 lbs. $37.00, transportation paid.

"Fairmount Park"
Our Popular Low Priced Mixture

Where large areas are to be seeded or wherever a good stiff covering of permanent and rich green grasses is the main object our special "Fairmount Park" Lawn Mixture should be sown. It is well suited to various soil conditions giving excellent results even on small city grass plots where the soil is frequently rather stiff and heavy. It will form a thick turf in a very short time and can stand considerable hard wear. Pt. 20c; qt. 35c; 2 qts. 65c; 4 qts. $1.15; peck $2.20; 1 bu. (12 lbs.) $4.00; bu. (25 lbs.) $7.50; 100 lbs. $29.00, transportation paid.

"Shady Place"
Gives A Velvety Smooth Sod

The difficulty of establishing a lawn in a semi-shadowed position or in places which are shaded during part of the day is easily overcome by the use of Dreer's "Shady Place" Lawn Grass Mixture because it is composed of specific kinds of grasses which naturally grow best under such conditions. Dreer's "Shady Place" Lawn Grass will give you a rich verdant lawn of good appearance. Feed and water the area regularly to stimulate growth. Pt. 30c; qt. 55c; 2 qts. $1.00; 4 qts. $1.90; peck $3.50; 1 bu. (12 lbs.) $6.50; bu. (25 lbs.) $12.75; 100 lbs. $50.00, transportation paid.

1838 – A Century – 1938
of Horticultural Service

The year 1938 marks the Hundredth Anniversary of Henry A. Dreer, Inc. It was in 1838 that Henry A. Dreer, a young man of 20, founded the business in the heart of what in those days was the central business district of Philadelphia. Located at 97 Chestnut Street, it stood alongside the Bank of North America with historical Carpenters’ Hall and Independence Hall just a short distance away. The young enterprise proved successful from the start, guided by the high ideals of the founder whose integrity and methods of fair dealing attracted an ever widening circle of gardeners. His broad horticultural knowledge and reliability won him the respect of a large clientele. A catalog, simple compared with this Hundredth Anniversary Edition, and advertising in the best publications of the day stimulated the business which soon became a leader in the industry. After 10 years in the original location larger quarters were found at 59 Chestnut Street. Another decade found the ever-growing business at 117 Chestnut Street. In 1863, the year of the Battle of Gettysburg, another change was made to 714 Chestnut Street. This address remained the home of the firm from the days of the Civil War until after the World War.

By 1924 the available space had become so inadequate that a modern fireproof eight-story building was erected at 1306 Spring Garden Street where the business is now located. The founder personally conducted the business until his death in December, 1873, when his son William F. Dreer took charge. Instilled with the ideals of his father and endowed with health, youth, keen mentality, and personal charm he led the business to still greater success. In 1892 William F. Dreer formed a corporation permitting the heads of the departments to become stockholders. This policy has been continued ever since.

From 1839 to 1850 the nurseries were at “The Woodlands” along the Schuykill River, once the beautiful estate of Andrew Hamilton and now Woodland Cemetery. The next 23 years found the nurseries on 35th Street below Haverford Avenue.

When the rapidly growing City of Philadelphia prevented expansion a site of over a hundred acres was selected at Riverton, New Jersey, because of its ideal conditions of soil and climate and accessibility to Philadelphia. The six original small greenhouses soon were found inadequate and were replaced by large modern buildings added from time to time until today there are 10 acres under glass. The addition of Locust Farm increased the growing capacity by 70 acres in 1905. Riverview, also only a short distance away, was acquired in 1910 adding another 125 acres with 2½ acres occupied by modern greenhouses.

**DREER QUALITY FLOWER SEEDS**

Whenever a gardener whether amateur or professional sees flower seeds he does so in expectation of a beautiful display. To realize this one must choose his seeds wisely for no amount of care can overcome the inherited handicap of seeds gathered from inferior plants. Only ideal specimens, carefully selected by trained horticulturists, can be depended upon to reproduce their desirable characteristics.

Dreer's Quality Seeds are the result of the most rigid system of selection by trained experts. In addition to those produced on our own farms, we offer the products of specialists all over the world who have made a life study of developing certain species that respond most favorably to their particular soil and climate. This is a most important feature of Dreer's Flower Seeds and accounts for the uniformly high quality of the thousands of different varieties offered.

**QUALITY at Reasonable Prices**

All gardeners are bound to be attracted to Quality Seeds because the results are so much superior to those obtained from common seeds. Those who compare prices will be astonished to find that the packet price of by far the majority of varieties is no more than that asked for average seeds. If in some cases there appears to be a difference in the quality of the seeds in the packet, it must be remembered that Quality Seeds produce a high percentage of sturdy plants whereas inferior grades often contain much useless chaff.

**The NEW Dreer Seed Packets**

With but few exceptions the new Dreer seed packets have simplified little drawings which show clearly the seedlings during various stages of development. There need be no question as to whether the plants are those developed from the seeds present in the packet or represent weeds seeds of which are present in every garden soil. No longer will the quick-sowing, coarse seeds be carelessly planted while the small seedlings are completely overlooked.

This new feature of the Dreer Flower Seed packets is further proof of our sincere efforts to help our customers with their gardening problems so that they may reap the fullest enjoyment and benefit from their gardens. May we suggest that you save the empty packets for pasting in your garden scrapbook.
Dreer's FLOWER SEEDS are TESTED with Care

Every precaution is taken to insure the highest vitality and quality of Dreer's Flower Seeds. Customers may depend upon them to produce sturdy, vigorous seedlings. By means of carefully conducted germination tests made in soil we are able to duplicate the performance of the seed in the hands of our customers. This procedure of testing gives an accurate germination percentage as it eliminates from the count any seeds too weak to reach the soil surface. The outdoor trial grounds at our Riverton Nurseries are a check on the quality of our strains and they serve as a testing ground for new varieties.

Dreer INTRODUCTIONS

Novelties in Flower Seeds are intriguing subjects for many gardeners. We always have been most anxious that Dreer introductions should be not merely different from existing sorts but worthwhile additions and improvements of real value to the gardener. The production of new varieties often is a slow and tedious process. Once the old order of plant “genes” has been disturbed, nature is likely to produce variations of many kinds. Marigolds which for decades had undergone very little change are a good example of what is likely to occur once the plants begin to “sport.” Most gardeners of today are unaware that the double blue Cornflower was introduced to America by Henry A. Dreer. Another great favorite, given to the garden world by Dreer is the Cardinal Climber. Among Dreer's Peerless Pink and Sensation, the magnificent Dreer strain of Double Fringed and Mammoth Verbena are some others. Dreer's Korean Hybrid Chrysanthemum seed, of which was offered for the first time a few years ago, is another outstanding contribution, and Dreer's New DeLuxe Korean Hybrid Chrysanthemum offered for the first time this year is truly sensational in every respect.

Dreer's QUALITY BULBS

Equal care is exercised in our Bulb Department. Experience has taught us that gardeners want large size bulbs which will give the finest flowers. The difference in price between Dreer's large bulbs and smaller sizes is too insignificant in comparison with results to waste time and effort with any but the best. In addition to the choice standard sorts our catalog includes a wide range of new and rarer kinds that have real value. For autumn planting we issue a special Fall Bulb Catalog that includes such favorites as Narcissus, Tulips, Hyacinth, Crocus, Snowdrop, and many others that must be planted in the fall.

VEGETABLE SEEDS

Once the gardener has grown his own vegetables he is bound not only to continue but to increase the area to provide a supply for the entire year. The difference between home-grown vegetables and those purchased in the market is certainly striking. Freshly gathered Peas, Beans, and Sweet Corn have a flavor and tenderness that are entirely lacking in market products. Their sugar content undergoes a rapid chemical change once the edible portion is removed from the growing plant. Even the flavor of root crops such as Beets, Carrots, Turnips, Radishes, etc., deteriorates so rapidly that there is no comparison between the freshly harvested ones and those available even at the roadside stands of the grower. Half an hour's delay between gathering and cooking makes a tremendous difference in the flavor and sweetness of many kinds. To enjoy vegetables at their best one simply must grow his own.

Carefully Selected Strains of the Finest Vegetables

Developments in vegetables have been as sensational as those in flowers. Specialists all over the world are continuously at work cross-breeding and selecting strains that represent the greatest improvements. Among the truly outstanding are the Yellows-Resistant varieties of Cabbage, Disease-Resistant Sweet Corn, and Wilt-Resistant Watermelon. Strains of improved quality, greater productiveness, and better appearance yearly are widening the range of selection. These new varieties are added to our catalog after careful tests are made in our vegetable testing plots so that we may be sure of their desirability and superiority. As older varieties are superseded by better ones they are gradually dropped from our list so that you may depend upon the varieties we offer representing the best.

All Vegetable Seeds are Carefully Tested for Vitality

All Dreer Vegetable Seeds are carefully tested in soil as a final check to make sure they will grow and produce sturdy seedlings.

Or you may like to browse around and examine some of the latest tools or garden accessories on display. In addition to seeds and supplies, such as fertilizers, insecticides, fungicides and a full line of tools, we always have on hand a splendid selection of various types of plants for house and porch decoration and other items of special interest. Dreer's LITTLE GARDEN
During the spring months Dreer's Little Garden, alongside the store, will give you an opportunity to make your personal selection from a wide range of sturdy plants ready to set out into the garden. While the space is not large enough to display all of the thousands of plants offered in our catalog you will find a wide selection of the most popular ones and others that deserve to be better known. In addition to potted Roses of the most popular varieties we present a collection of perennial plants growing in pots so that they will transplant safely without any disturbance to the root system. More than an Entire Floor is Devoted to GARDEN SUPPLIES
The tools and various garden supplies displayed in our store comprise only a small part of our stock. The entire sixth floor of our building as well as parts of others is utilized by our "Sundry Department." The pages devoted to this department in Dreer's Garden Book give a good idea of its completeness. Every item has been selected with the greatest care to provide the gardener with worthwhile kinds only. The tools in particular represent a wide assortment that will perform with the least amount of energy. Good gardeners are not interested in cheap accessories which do not last and for this reason you will find assembled in our Sundry Department only well-made and substantial tools that will give years of excellent service. In many cases their inclusion is based upon the experience gained on our own farms where they receive many thorough tests on a large scale. Our list of insecticides and fungicides deserves your particular attention as it is composed of tried and proved kinds and the same care is exercised in the selection of fertilizers and plant foods.
Dreer's FAMOUS ROSES

Dreer's Roses are known the world over for their excellence. They are a most important Dreer specialty with an enviable reputation that reaches well beyond the confines of our country. The difference between Dreer Quality Roses and ordinary stock is at once apparent even to one not versed in horticulture because they abound in vigor and have size which is so important to success. All Dreer Roses are strong, potted, two-year-old, field grown plants of choicest quality.

The Dreer ROSE GARDEN

We wish it were possible for all our customers and others interested in Roses or gardening in general to pay a visit to the Dreer Rose Garden at Riverton, N. J. June is the month to see the garden at its best for then the Hybrid-Tea Roses are in full bloom. Another good time to see the Rose Garden is the two weeks preceding frost which happens with us during the second or third week of October. The beauty of the Rose Garden must be experienced as words are wholly inadequate to describe it. Beds upon beds, made easily accessible by grass walks that run between them, present a colorful picture not to be forgotten. The artistic layout of the garden and the careful arrangement of the colors and hues make an enchanting picture. In addition to all first-class varieties the garden includes many so new that they have not yet been named, for the Rose Garden also is our testing plot for new varieties.

Our efforts to give Rose lovers an ever greater range of beautiful Roses have been well rewarded. Many of the country's outstanding Roses were introduced by Dreer. For 1938, Dreer's Hundredth Anniversary, we present 'R. M. S. Queen Mary', a Rose that has received many high honors both at home and abroad. In addition to its value as a garden Rose it has proved its worth as a forcing variety so that its beauty may be enjoyed practically all the year round. A picture in full color is shown on page 151.

MERITORIOUS PERENNIAL PLANTS
SHRUBS & HARDY VINES

Perennial Plants, Shrubs, and Vines are indispensable plant material. No garden is complete which does not include its proper share of them. Shrubs and Hardy Vines, because of their size and permanence, determine the garden setting and lend themselves to an endless variety of arrangements. They link the house and other buildings to the garden creating a picture with graceful curves that hide the abrupt straight lines of building foundations. Climbers mellow the upright lines of fences, porches, garden houses, etc. Properly arranged shrubs and vines will give a complete garden without any other material, excepting the lawn only. Perennials, however, add special interest to such a setting because of the ever changing picture they provide. By choosing them not only for their height and color but for their season of bloom one may have flowers from earliest spring until severe frost puts an end to the garden display. Berried shrubs will add a special lure that lasts well into the winter.

Since Perennial Plants, Shrubs, and Vines are so important it pays to take special care in planting suitable kinds of unquestionable quality. You will find in Dreer's Garden Book a wide assortment selected because of merit. Our extensive operations as nurserymen give us the opportunity to observe and study the behavior of many different kinds. Only those that have real value are offered.

Dreer's young vigorous plants of perennials are much superior to old, overgrown, field grown clumps which have seen their best days and find it difficult to recuperate from the effects of transplanting. In the case of shrubs we furnish these in sizes best suited to transplanting. They too are full of vigor and eager to take hold of the soil in their new surroundings. We state in the catalog the size of the plants when shipped besides indicating the final average height.

The Magnificent Silver Lace Vine
An alluring hardy vine growing to a height of 25 feet. Bears great masses of foamy white flower sprays during the fall and often it also blooms in a limited way earlier in the season. Strong plants 60c each; $6.00 per doz.

New “Pink” Buddleia Charming
A glorious new shrub bearing throughout the late summer and autumn elegant long sprays covered with lovely lavender-pink blooms which compared with other Buddleias are distinctly pink. For September and October flowers we suggest pinching off the first flower spikes in July to aid the development of side branches which will flower during the autumn months. Awarded a Silver Medal by the Pennsylvania Horticultural Society. Strong flowering plants 75c each; $7.50 per doz.

**Dreer’s Giant Pacific Hybrid Delphinium**

**The Sensational New Strain from the Pacific Coast**

Delphinium experts throughout the country have expressed great enthusiasm about this marvelous new strain. The Giant Pacific Hybrids are truly sensational and reports from many different sections of the country as well as foreign lands are unanimous in their praise. They received most favorable comments in the 1936 Year-book of the American Delphinium Society by an outstanding authority on Delphinium who, himself, is a breeder of note.

"The Most Beautiful Delphinium I have ever seen"

These are the very words of one of our own experts on a recent visit to the Pacific coast. His opinion is shared by others who say... amazingly fine precision of placement of florets... rarely a single... nicely formed bees... fine foliage... unusual uniformity of habit... marked disease resistance... impressive tall spikes of slightly tapering formation. Plants with white bees predominate.

The Giant Pacific Hybrids stand out as the showiest and most glorious of all Delphinium. Under favorable conditions the plants will reach truly gigantic heights, yet every flower spike is well formed. The individual flowers are huge. They measure 2 to 3 inches in diameter and are beautifully spaced on a well balanced, long spike. The wiry stems are slender but strong and the colors represented have been chosen with extreme care. A large percentage of the plants have proved decidedly resistant to mildew.

**Giant Pacific Hybrids**

Already we have received quite a number of most complimentary reports from gardeners who gave these new Giant Pacific Hybrid Delphinium a trial during the past season. Every gardener interested in Delphiniums should certainly give this strain a thorough trial this year.

Lupinus, Russell Hybrids

A most remarkable new strain of Hardy Lupines from Great Britain

The wide publicity given to these new Lupines in all the leading gardening papers of this country is bound to induce many gardeners to give them a trial during the coming year. The Russell Hybrid Lupines have proved the most outstanding hardy Lupine ever developed. A Gold Medal awarded by the Royal Horticultural Society of Great Britain in June 1937 is ample proof as to what English gardening experts think about it. The plants grow into well-rounded, well-branched bushes, each developing a number of extra-large spikes closely set with flowers. One of the most outstanding features of this strain is the range of beautiful colors—deep yellow, orange, red, and brilliant bicolor combinations never seen here before in hardy Lupines. Pkt. Shakespeare's Pansies

This lovely strain of Pansies was discovered five years ago. The simplicity of the flower suggested saving the seed for propagation and when later on the grower chanced to glance over an old flower book he was surprised to find that what he had was practically identical with the Pansy as it was grown during Shakespeare's time. It is a simple quaint little Pansy suitable for any location in the garden and can be grown easily wherever Pansies are successful. Its form, habit, and time of flowering coincide with that of Viola Papillo. Pkt. 50c; special pkt. $1.25.

Antirrhinum  
The Popular Snapdragons

Snapdragons are great favorites. They are easily grown from seed blooming continuously throughout the summer and fall. If protected during the winter, midsummer sowings will produce particularly fine flowers during the following spring. Just cover them with a bottomless box and a pane of glass over the top. The germination of Snapdragon seed has proved to be easiest if finely sifted coal ashes are used as a seed bed. Prepare your seed pan in the usual way and add a layer of finely sifted coal ashes 1 inch deep on the top. Sow the seed thinly on top of the ashes and water carefully. Keep moderately moist in a fairly warm place until the seedlings appear.

**Six Rustproof Maximum Varieties**

The development of these new Rustproof Snapdragons is one of the greatest accomplishments ever made by plant breeders. It is possible now to have them grow to perfection even where the old strain has proved a complete failure due to rust infection. These new Maximum varieties grow about 3 feet in height and bear an abundance of long, strong flower stems with giant blooms of perfect form. As they are highly rustproof, success with them is most certain.

**Oriental Poppies**

**Papaver orientale**

The garden which does not contain a good display of the lovely Oriental Poppies misses the most showy of all hardy garden subjects that bloom during late spring and early summer. The huge flowers set against the deep green foliage never fail to evoke the greatest admiration. Sow the seed early in the spring in the open where the plants are to bloom or in a special seed bed. By midsummer the little seedlings will likely have disappeared from above the ground and it is at that time of their life that the roots can be transplanted with perfect safety. If moved during the spring there is great danger that they will not survive. Only a small percentage of the seedlings of named varieties come true to color.

The Book of Annuals (Hottes). A reliable guide to the culture of annuals. $1.50 per copy, postpaid.
Dreer’s New Improved Lawn Grass Mixtures

No matter how much care is bestowed upon the preparation of the soil, the beauty of the lawn depends primarily upon the quality of the seed. We fully realize this very important fact and so do every up-to-date gardener. For this reason the Dreer mixtures have been blended with extreme care. They contain only grasses suitable to produce a good lawn and in addition to this the thoroughness with which they are cleaned results in an extra-heavy weight of about 12 ounces per quart which in turn insures a good stand of grass.

Dreer’s “Golf Links”
Careful tests and exhaustive study are the background for this special golf link mixture. In order to be successful it must be able to withstand the hard use suffered by the average fairway. It is splendid for Golf Courses, Fairways, Teeing Grounds, Football and Polo Fields, and other Athletic Grounds. It does not contain any white clover. Pt. 25c; qt. 40c; 2 qts. 75c; 4 qts. $1.30; peck $2.50; ½ bu. (12 lbs.) $4.50; bu. (25 lbs.) $9.50; 100 lbs. $37.00, prepaid.

“Putting Green” Mixture
The most important requirement for a first class “Putting Green” mixture is the use of choice fine-bladed grasses which will make an even, low, thick sod that retains its rich green color throughout the season. Dreer’s “Putting Green” mixture will eminently fill these requirements. It will stand continuous cutting and close tramping, since it contains a liberal proportion of Bent grass. Pt. 40c; qt. 75c; 2 qts. $1.40; 4 qts. $2.90; peck $4.50; ½ bu. (12 lbs.) $8.50; bu. (25 lbs.) $16.50; 100 lbs. $65.00, prepaid.

“Seashore” Lawn Grass
To establish a good green lawn at the seashore requires the use of a special mixture suited to such conditions. The deep-rooting grasses included are most important to success but since no lawn grass will thrive in sand it is quite important to top dress the area with a 4 inch layer of good garden soil. Pt. 25c; qt. 45c; 2 qts. 85c; 4 qts. $1.60; peck $3.00; ½ bu. (12 lbs.) $5.75; bu. (25 lbs.) $11.00; 100 lbs. $43.00, prepaid.

“Southern” Lawn Grass
The establishment of a good lawn in tropical and semi-tropical climates will be comparatively easy by the use of this special “Southern” Lawn Grass mixture. It has been prepared with the utmost care and Bermuda grass is one of its many components. In order to insure successful water and periodical fertilizing are essential to maintain its vigorous growth. Pt. 25c; qt. 45c; 2 qts. 85c; 4 qts. $1.50; peck $2.75; ½ bu. (12 lbs.) $5.25; bu. (25 lbs.) $10.00; 100 lbs. $39.00, prepaid.

White Dutch Clover
Those who prefer an extra-heavy stand of clover in their lawn should use White Dutch Clover at the rate of 2 to 4 ounces to each quart of seed. Sow this separately to effect an even distribution. Oz. 10c; ½ lb. 25c; ½ lb. 40c; lb. 75c; 5 lbs. $3.50; 10 lbs. $6.75; 25 lbs. $16.00, prepaid.

Kentish Wild White Clover
This comes from Southern England and has proved a true perennial of dwarf growth. Well suited to lawns and parades. Extra fine reeanced seed of high purity. Oz. 20c; ½ lb. 75c; 1 lb. $1.30; 1 lb. $2.50, prepaid.

All Lawn Grass Mixtures up to 100 lbs. will be sent prepaid, we reserving the right to ship by Parcel Post, Express, or Freight.

Round-Pod Kidney Wax Beans
Dwarf or Bush Beans

Indispensable in Every Garden

Dreer's Reliable VEGETABLE SEEDS

Haricots, Fr.

Fagiolini, Ital.

One pound will plant about 100 feet of drill.

Haba, Sp.

Bohnen, Ger.

Culture—Plant after the weather has become firmly settled, say around the middle of May in the latitude of Philadelphia. Any good soil will produce a heavy crop but well-enriched sandy loam is particularly productive. Sow seeds in rows 2 to 3 feet apart dropping the beans 4 inches apart in the row. Cover about 2 inches deep. Cultivate only when dry. Make succession sowings 2 weeks apart up to August 1. Spray with Dutox to control Bean Beetles.

Green-Pod Varieties

23 Bountiful

Few other beans enjoy such tremendous popularity as this splendid, vigorous, and disease resistant variety. It has proved of particular value on lighter soils where the round-pod varieties fail to produce satisfactory crops. It bears the bulk of its crop within 75 days after planting with the first picking ready within 60 days. The pods are 6 inches long and 1/2 inch wide. They are brittle, tender, perfectly stringless, and very tasty. Pkt. 10c; $1.65, prepaid.

28 Dwarf Horticultural. Large green pods splashed with red. Mostly used for shell beans but good as snaps while young then being stringless. Pkt. 10c; $1.55, prepaid.

25 The Commodore—New★

A Dwarf Kentucky Wonder

A sensational new Bean which we are sure will soon be grown on a large scale. Most gardeners are well acquainted with the enormously productive Pole Kentucky Wonder Beans and in this new variety we have a dwarf or bush form with nearly straight, fleshy, brittle, and stringless pods which measure 8 to 9 inches in length. We can highly recommend this for trial for everybody. Offered for the first time in the United States and highly recommended for a trial planting. Pkt. 25c; $1.65, prepaid.

61 Tendergreen

A Bean of real merit producing strong vigorous bushes laden with beautiful light green beans measuring 7 inches in length. The pods are round, very meaty, tender, and entirely stringless even when fully developed. Tendergreen already has made a name for itself entirely due to the fact that it is a quality variety. Pkt. 10c; $1.65, prepaid.

Plant Beans after the soil has warmed up and the weather is settled.
**Bush Lima Beans**

**Culture**—Lima Beans are very susceptible to cold and seeds should not be planted until the ground has become thoroughly warm. Sow about the same time that late trees, like Oaks, unfold their first leaves. Being gross feeders, they should be sown on well-enriched land, with the rows 2½ feet apart, placing the beans six inches apart in the row. Eye down. The two halves of the Lima Bean seed become its seedling leaves and unless the Beans are placed “eye down” the young plants find it most difficult to push through the soil. In light soil, cover about one inch deep, less on heavier soils. A good fertilizer applied at the rate of 20 pounds to every hundred feet of row, when the plants begin to bloom, will materially increase the yields. Hill plants slightly earlier in the season to hold the pods off the ground. One pound will plant 50 feet of row.

**111 Dreer’s Wonder Bush Lima**

The most desirable Bush Lima Bean because it is extremely early and very productive. The plants are of strong upright bush growth. They are heavily laden with large pods many of which contain 4 beans each. These beans are fully as large as those of Pole Limas. Many gardeners pronounce the broad, flat beans much superior in flavor to those of the round, thick-seeded varieties. We highly recommend it and suggest that you give it a thorough trial this year. Pkt. 10c; ½ lb. 25c; lb. 45c; 2 lbs. 85c; 5 lbs. $1.95, prepaid.

**103 Burpee Improved Bush Lima.** A splendid Bean with pods measuring 5½ to 6 inches in length and containing 5 or 6 moderately thick, flat, white beans of good flavor. It is a productive variety of delicious flavor even when fully grown. Pkt. 10c; ½ lb. 25c; lb. 45c; 2 lbs. 85c; 5 lbs. $1.95, prepaid.

**105 Dreer’s Bush Lima.** This excellent Bean matures about a week or 10 days later than Dreer’s Wonder Bush Lima. It is particularly recommended to home gardeners because it combines productivity with choice quality. The beans are packed close together, 4 or 5 to a pod. They are thick and have a most delicious, sweet, and luscious flavor. It is a great favorite with many gardeners. Pkt. 10c; ½ lb. 25c; lb. 45c; 2 lbs. 85c; 5 lbs. $2.00, prepaid.

---

**109 Henderson’s Bush Lima.** This is the popular Baby Lima Bean—a bush form of the Small or Sieva Pole Lima. It is grown extensively by those who prefer small sized beans. Very productive bushes, 20 inches high, bearing a magnificent crop of pods 3 inches long each containing 3 or 4 small white beans. Pkt. 10c; ½ lb. 25c; lb. 40c; 2 lbs. 75c; 5 lbs. $1.65, prepaid.

**110 McCrea’s Bush Lima**

This new variety is of considerable merit. The feature that will appeal to most gardeners is the fact that it has a remarkably sweet flavor. The plants are strong and upright carrying an abundance of heavy foliage. The light green, short, but very thick pods are equally as abundant and each pod contains from 3 to 5 large plump rich green beans which are so tightly packed in the pod that many of them are almost square. Highly recommended to the home gardener and canner. Pkt. 15c; ½ lb. 25c; lb. 45c; 2 lbs. 85c; 5 lbs. $1.95, prepaid.
Pole Lima Beans—For Extra-Heavy Crops

Culture—Pole Limas are even less hardy than the Bush type and should not be planted until toward the end of May or when all danger of frost is passed. Set the poles about 4 feet apart each way and plant 6 to 8 heavas, eye downward, around each pole. When plants are up, thin out to 3 plants to a pole. Pinch off the ends when plants overrun the top of the poles. It is good practice to use a shovelful of rich, light, well-rotted compost to each hill. **One pound of seed will plant 75 to 100 hills.**

115 Carpinteria Lima. Vigorous, strong vines, producing large quantities of pods, usually containing four large heavas each. The heavas are thicker than the ordinary Limas and retain their pale green color even when dried. Of choice quality and attractive appearance. Pkt. 10c; ½ lb. 25c; lh. 40c; 2 lbs. 75c; 5 lbs. $1.65, prepaid.

117 Dreer’s Improved Pole

Some gardeners know this variety as Challenger or Potato Lima. It is a medium-late variety of strong growth, bearing a very heavy crop of attractive pods that shell out more heavas from a given number of pods than any other Pole Lima. Each pod contains 4 or 5 thick and attractive, light green heavy pods. Pkt. 10c; ½ lb. 25c; lh. 45c; 2 lbs. 85c; 5 lbs. $1.75, prepaid.

121 King of the Garden. An old favorite variety of vigorous growth bearing large, dark green pods with four or five large white heavas of splendid quality. An Improved Large White Lima that yields heavy crops. Pkt. 10c; ½ lb. 25c; lh. 40c; 2 lbs. 75c; 5 lbs. $1.65, prepaid.

122 Leviathan Early. The earliest large-podded Pole variety in cultivation and an enormous cropper. The pods are 5 to 6 inches long and contain 5 or 6 heavas each. The shelled heavas are of excellent quality. Pkt. 10c; ½ lb. 25c; lh. 40c; 2 lbs. 75c; 5 lbs. $1.65, prepaid.

125 Small or Sierra. The poles are literally loaded with small, well-filled pods. Small white heavas, like the Henderson Bush variety. This is a fine Bean for home canning on account of its tasty flavor. Pkt. 10c; ½ lb. 25c; lh. 40c; 2 lbs. 70c; 5 lbs. $1.55, prepaid.

Pole or Running Beans

Very Productive Types

Culture—Pole Beans are vigorous growers and will produce a heavy crop of beans if grown on fertile ground which has been enriched with well-rotted manure or a complete fertilizer. As they are less hardy than the bush varieties start sowing about a week later. Set the poles 4 feet apart and place 8 to 10 heavas around each. Or they may be grown on a trellis. **One pound of seed is sufficient to plant 100 poles or hills.**

Green-Pod Varieties

128 Kentucky Wonder or Old Homestead. This splendid bean combines size and quality in an extraordinary degree. The pods generally are borne in clusters of 2 to 4, each pod measuring 7 to 8 inches long. They are deeply saddle-hacked, very fleshy, and are best picked before they reach full size. Where poles are not available, wire or heavy string supports should be provided since the vines are rank growers, bearing exceptionally heavy crops. Pkt. 10c; ½ lb. 25c; lh. 40c; 2 lbs. 70c; 5 lbs. $1.55, prepaid.

Fresh cabbage, cut from your own garden, is vastly superior to "store" cabbage.
One ounce will sow 100 feet of drill; 3 to 4 pounds for an acre.

Culture—One of the few crops that will do well in all soils though a good, deep, friable loam will produce the best looking roots. For an early supply, sow seeds of early sorts as soon as the soil can be dug, placing rows 18 to 24 inches apart and thinning out seedlings to stand 2 to 3 inches apart in the row. Make repeated sowings every 2 weeks. For a winter supply, sow the larger growing firm-fleshed varieties like Danvers, Rubicon, etc., any time during May. The much larger stock varieties should be thinned out to stand 6 to 8 inches apart in rows, 21 to 3 feet apart. Varieties marked with a star (*) are the best for stock feeding.

232 Chantenay, Improved Red Cored. A large, thick, stump-rooted carrot slightly tapering towards the bottom. The orange-red skin is very smooth, making it of very attractive appearance. The quality is most excellent, being very crisp and tender with core hardly distinguishable. A splendid carrot for use throughout the summer and fall, and excellent for winter storing. Pkt. 10c; oz. 25c; $1 lb. 60c; lb. $1.75.

234 Danvers’ Half-Long Orange. More extensively grown than any other Carrot. Of rich orange-red color, smooth, and handsome. The roots are 6 to 7 inches long and taper to a blunt point. They are sweet, crisp, and tender. Produces more bulk to the acre than the larger, longer varieties. This also is a good sort for the home gardener to grow for storing over winter. Pkt. 10c; oz. 25c; $1 lb. 60c; lb. $1.75.

**Lettuce Seeds**

**Lettuce Fr., Lattuga, Ital.**

**Lettuce Seeds**

Indispensable for salads and garnishing

**CULTURE**—For the earliest supply sow seed of Loose-Leaf and Early Butterhead varieties under glass or indoors in boxes about March 1st. Sow thinly, and when the young seedlings are three inches tall transplant 3 to 4 inches apart each way in another seed flat or box. As soon as the ground can be prepared set out in rows 18 inches apart, spacing the plants 4 to 6 inches apart in the row. For a succession sow seeds of Midseason Butterheads, Crispheads, and Cos Lettuces right in the open ground around middle of April. All Lettuces must be thinned out to stand from 6 to 10 inches apart in the row to head properly. During July again sow early Butterhead varieties for a fall supply. One ounce will produce about 3000 plants.

**“Loose Leaf” Varieties**

These do not form heads but produce a thick mass of loose, brittle, tender leaves early in the season before the heading varieties are available. Also fine for growing in the greenhouse during winter.

**460 Grand Rapids Forcing.** A favorite early Lettuce for under glass or outdoors early in the season. It matures quickly, is of a large size, and of handsome appearance. The crisp, tender leaves are bright green and crimped at the edge. Pkt. 10c; oz. 20c; ½ lb. 60c.

**442 Black-Seeded Simpson.** One of the most popular “Loose Leaf” sorts because it is very dependable. Produces a compact mass of broad, much crumpled, light yellowish green leaves of extra fine quality. Pkt. 10c; oz. 20c; ½ lb. 60c.

**452 Early Curled Simpson (Silksia).** One of the oldest loose-leaf Lettuces and quite familiar in American gardens. Forms a close, compact mass of light green, crumpled leaves. Excellent forcer. Pkt. 5c; oz. 20c; ½ lb. 60c.

**“Butterhead” Varieties**

The varieties under this classification all form good-sized, solid heads with tightly folded hearts which blanch to a beautiful light creamy yellow color. They will withstand a moderate amount of warm weather.

**446 Big Boston.** More extensively grown than any other variety in this class. It is early and hardy, of a medium light green with a slight tinge of brown on margins of outer leaves. Very desirable for forcing and also for spring and fall outdoor planting. Of good quality, being crisp, tender, and of fine flavor. Pkt. 10c; oz. 25c; ½ lb. 70c.

**448 Boston Market (White Seeded Tennisball).** A well-known sort, producing crisp, medium sized, light green heads with outer leaves tinged with brown. Good both under glass and outdoors. Pkt. 10c; oz. 25c; ½ lb. 70c.

**450 California Cream Butter.** Produces a large, solid head and withstands most adverse weather. The thick, dark green leaves are tinged and spotted with brown. The interior of the head is rich golden yellow and of very fine quality. Pkt. 5c; oz. 20c; ½ lb. 60c.

**468 May King.** Very early, and being hardy will stand considerable cold, damp weather. It can be planted out of doors or under glass, and in either case will produce attractive, solid heads. The outer leaves are yellowish green tinged with brown, while the solid heart is rich golden yellow and has a fine buttery flavor. Pkt. 10c; oz. 25c; ½ lb. 60c.

**474 Salamander.** One of our most popular and reliable varieties. A medium green, medium sized sort which always heads up well and does well under almost any weather conditions. Leaves crumpled and of fine tender quality. Has a solid tasty heart. Pkt. 10c; oz. 20c; ½ lb. 60c.

**458 Unrivaled (White Boston).** A handsome, early Butterhead of extra choice quality. Will form closely folded heads with golden hearts within sixty days from sowing seeds. An all-season variety for cool sections but best for spring sowing in the latitude of Philadelphia and sections with similar hot summer weather. Pkt. 10c; oz. 25c; ½ lb. 70c.

**441 Aristocrat.** This new Butterhead Lettuce represents a most careful selection from California Cream Butter. It produces well-rounded heads of medium size with dark green outer leaves which hold tightly over the head. The interior blanches to a light creamy yellow. Aristocrat is what its name implies—a quality variety of sweet flavor and brittle texture. Pkt. 10c; oz. 25c; ½ lb. 75c.

**400 Dreer’s “All Heart” Lettuce**

The name of this variety is most descriptive, because the few loose outer leaves enclose a head that is one large solid heart. While suitable for summer use in cool sections, it is preeminently an early spring variety. The heads are of an appetizing yellowish green color, making it a most attractive home garden variety. Pkt. 10c; oz. 25c; ½ lb. 70c.

Dreer's Reliable VEGETABLE SEEDS

Dreer's Onion Seed

Culture—Large Onions are easily grown from seeds in one season provided the gardener has a rich piece of ground and is willing to do the necessary hand weeding and transplanting of the young Onions. Seeds may be sown very early in the spring in rows 18 inches apart, and as soon as seedlings are 3 to 4 inches tall they should be thinned out to stand 3 to 4 inches apart in the row. Several applications of Bovung or wood ashes scattered on both sides of the row and hoed into the soil will benefit the developing roots immensely. Pull when tops begin to die down, cure, and sell, or store in a cool, dry place. By sowing seed of the Spanish type, such as Prizetaker and the Southport Globes, under glass in February or March and transplanting in April to open ground 3 to 4 inches apart in the rows bulbs of immense size may be produced.

Best American Yellow Sorts

577 Philadelphia Yellow Dutch or Strasburg. A very popular home garden Onion. Well-flavored flesh; bright straw-colored skin and somewhat flattened shape. Has excellent keeping qualities. Pkt. 10c; oz. 25c; ¼ lb. 75c; lb. $2.50.

578 Prizetaker

The large size and handsome appearance of this Onion make it equally desirable for the home garden or for market. This true Prizetaker Onion is globe-shaped, has pale yellow skin, and white flesh, which is very mild and of delicate flavor. Large Onions are grown the first year from seed sown during the spring, thus making it a very desirable Onion for the home garden. It also is a good variety for sowing under glass in February for transplanting. Pkt. 10c; oz. 30c; ¼ lb. 90c; lb. $2.75.

586 Southport Yellow Globe. A large, globular, very productive, onion with yellow skin and white flesh of fine flavor. It is a late variety requiring a long season to come to maturity. Usually 100 days are needed from the time of sowing until the crop can be harvested. It is exceedingly popular in certain sections. Pkt. 10c; oz. 30c; ¼ lb. 85c; lb. $2.75.

587 Valencia

The best of the large sweet Spanish Onions

The Spanish type of Onion is valued for its exceptionally mild sweet flavor and Valencia is without doubt the finest of them all. It grows to truly enormous size if conditions are anyway favorable. Has beautiful golden yellow skin and pure white flesh of a mild and pleasing sweet flavor. Pkt. 10c; oz. 35c; ¼ lb. $1.00; lb. $3.50.

The Best Red Onions

These are by far the best winter keepers. They mature late and are strong-flavored.

580 Large Red Wethersfield. Of attractive appearance and doing well in all sections. The onions are very large and have a distinct flat shape. The skin is a beautiful purplish red and the flesh shows attractive pink shadings next to the skin. It has solid flesh of a rich onion flavor and will keep exceptionally well all throughout the winter until late spring. Pkt. 10c; oz. 30c; ¼ lb. 90c; lb. $2.75.

582 Southport Red Globe. A splendid round onion of uniform size and choice quality. It is the most popular of all the Red onions and has proved an exceptionally fine winter keeper, lasting well into early spring. Pkt. 10c; oz. 30c; ¼ lb. 90c; lb. $2.75.

588 White Bunching. This variety does not form bulbs and it is grown exclusively for green onions or scallions. Sow the seed thickly in rows and earth up gradually to blanch the stalks as far up as possible. Pkt. 10c; oz. 25c; ½ lb. 75c; lb. $2.25.

590 White Portuguese or Silver Skin. Large, flat, pure white onions ready for use within 75 days after sowing. A good keeper, also valuable for pickling and bunching. Fine-grained flesh of mild and pleasant flavor. Pkt. 10c; oz. 30c; ½ lb. 90c; lb. $2.75.

594 White Sweet Spanish

This is the largest of the globe-shaped white varieties. It resembles in form and size the pale yellow Valencia except that the color of the skin is pure transparent white. The flesh is firm yet tender and it has an exceptionally mild and sweet flavor. Easy to grow from seed to large size. Pkt. 10c; oz. 40c; ½ lb. $1.10; lb. $3.75.

For Seasoning and Garnishing

Culture—Succeeds best in a mellow, rich soil. Sow thinly early in April in rows 18 to 24 inches apart and ¼-inch deep. Thin out the plants to stand 6 inches apart in the row. The seed germinates slowly, plants taking from three to four weeks to make their appearance and sometimes failing to come up in dry weather. To insure prompt germination, soak the seed a few hours in warm water, or sprout in damp earth, and sow when it swells or sprouts. For winter use, protect in a frame or light cellar. One ounce of seed for 150 feet of drill.

Dreer’s Dwarf Perfection Parsley

600 Dreer’s Dwarf Perfection. A really marvelous strain of Parsley producing plants that are exceptionally even and compact. The exquisitely fine and prettily curled leaves are a rich dark pea green. Pkt. 10c; oz. 20c; ½ lb. 50c; lb. $1.75.

602 Dreer’s Exhibition. This new Parsley is just one solid mass of finely divided and curled leaves of a deep green color, resembling a bunch of moss. So attractive it may be grown as an edge to a flower border. Pkt. 15c; oz. 25c; ½ lb. 75c; lb. $2.25.

596 Champion Moss Curled. A favorite with many gardeners who value it for its dense dwarf growth of curled and crimped leaves which are a beautiful rich green color. Pkt. 10c; oz. 15c; ½ lb. 35c; lb. $1.00.

604 Dreer’s Summer Green. A selection from the Plain Parsley and a strong, vigorous grower that resists heat and drought to an unusual degree. Deep green color. Pkt. 10c; oz. 15c; ½ lb. 35c; lb. $1.00.

606 Hamburg or Rooted. This is grown for its fleshy Parsnip-like roots which are of a yellowish white color. They are 3 to 6 inches long and 2 inches thick at the top. Splendid in soup, stews, etc. Pkt. 10c; oz. 15c; ½ lb. 35c; lb. $1.00.
Culture—Sow seed in flats indoors or under glass in March; transplant seedlings when 2 to 3 inches high into other flats, 4 inches apart each way or into individual pots. When the weather has become thoroughly settled and danger from belated frosts is over (about corn-planting time), transplant to open ground in warm, rich, and well-prepared soil, placing rows 3 feet apart, with plants 2 feet apart in the rows.

Garden Peas

Guisante, Sr.
Erbsen, Ger.

One pound will plant 100 feet of drill.

Culture—The first sowing of peas may be made as early in March as the gardener can prepare a piece of ground because subsequent frosts do not hurt the young plants of the extra-early smooth-seeded varieties. Sow in single or double rows, 24 to 26 inches apart, covering seeds about 2 inches deep. All varieties over 2 feet tall do better with some sort of support. Where brush is lacking, poles and twine may be utilized. By selecting varieties maturing in succession (and it is easy to pick them out from the following pages because they are listed in about the same order as they reach full size), a constant supply of delicious peas may be had from early in June until middle of August. Experience has proved that sowings made after middle of May are not so successful as the earlier ones because hot mid-summer heat is apt to reduce both vines and pods.

Smooth-Seeded Extra-Early Sorts

618 Alaska. A very early, smooth, blue-seeded Pea very popular with home gardeners and canners. The vines grow about 2 feet high and bear an abundance of light green pods measuring 2½ inches in length and containing 6 light green peas each. Pkt. 10c; ½ lb. 25c; lb. 35c; 2 lbs. 65c; 5 lbs. $1.50, prepaid.

635 Dreer’s Eureka, Extra-Early. One of the earliest and most prolific of all the extra-early Peas. It has given good results wherever grown. The vines reach a height of about 20 inches. They are very robust and bear an abundance of pods. The individual pods measure 2½ inches in length and are well filled with large, rich green peas of sweet and tasty flavor. Pkt. 10c; ½ lb. 25c; lb. 35c; 2 lbs. 65c; 5 lbs. $1.50, prepaid.

630 Dreer's Electric, Extra-Early. A highly productive variety with round, blue-green seeds. The vines reach a uniform height of about 2½ feet. They are most productive, bearing medium sized pods of a rich dark green color. They are tightly filled with attractive medium green peas which are sweet, tender, and palatable. Dreer's New Edible-Pod Sugar Pea

696 Sugarstick

This is an entirely new type of Pea differing from the regular garden peas in that the tender, thick-shelled pod is as delectable and fibresless as the large, round peas within. Naturally, using the entire tender pods cooked like String Beans, produces a great increase of edible, luscious produce with the least amount of waste per plant.

The pods are elegantly curved and they have thick fleshy walls which are entirely free from fiber or hard tissue. The peas in the pods are large and tender, and of the same luscious sweetness as the walls of the pods. If desired the peas may be shelled and cooked separately so that two distinct delicious vegetable dishes may be secured for table use. The sliced raw pods also make a splendid addition to mixed salads.

The sturdy vines grow 4 feet tall and are very productive if given some support on brush, wires, or strings. Every gardener should give this new and most distinct variety a careful trial. Pkt. 20c; ½ lb. 50c; lb. 90c; 2 lbs. $1.75; 5 lbs. $4.00, prepaid.

Pumpkin
For Delicious Pies
One ounce for 25 hills.

Pumpkins are highly valued particularly for pies but there are many other ways of preparing them for table use. Sow the seed in good rich soil in May when the ground has warmed up and the nights have lost their chill. Those who grow Corn will find that they can grow two vegetables in one plot by sowing the Pumpkin seed in every fourth hill of Corn which spaces them about ten feet apart. Pumpkin varieties planted together will mix but there is not much danger of their mixing with Squashes or other vines.

**Tomato**

Wholesome and delicious whether raw, cooked, or canned.

**CULTURE**—For the first crop sow seeds of the earliest sorts under glass or in the house about the middle of February, giving the young seedlings plenty of light for stocky development. When they are 3 to 4 inches high transplant them into flats or a spent hotbed to stand 4 inches apart each way. Give plenty of air on sunny days to harden them properly. Such plants should start bearing middle of June and continue for the best part of 2 months. For the main crop, sow seeds of the second-earliest and main crop varieties in a hotbed or warm cold-frame by April 1st. Around Decoration Day prepare spaces 3 feet apart each way, digging the hole a foot deep and of equal diameter and filling this with well-rotted stable manure or humus. Set the plants into these spaces and to prevent loss from cut worms surround the young plants with a collar of cardboard. Where the young plants are grown in paper pots, set them into the ground, pots and all, just tearing out the bottom. **One ounce of seed will produce about 2500 plants.**

The Earliest Sorts

894 Bonny Best. An early variety, popular all over the country. The scarlet fruits are almost round, and are produced in abundance. This is also a good forcing Tomato. Pkt. 10c; § oz. 25c; oz. 40c; § lb. $1.25.

896 Break O’Day. A recent introduction and aptly called “The Early Marglobe” as it matures about 10 or 12 days ahead of that variety. The fruits are similar, being round, smooth, solid, and of a fine scarlet color. Highly resistant to disease. Pkt. 10c; § oz. 25c; oz. 40c; § lb. $1.25.

917 John Baer. A splendid early Tomato producing large, well-shaped, red fruits of fine flavor. Better than the old Chalk’s Jewel. Pkt. 10c; § oz. 20c; oz. 35c; § lb. $1.00.

940 Pritchard or Scarlet Topper

★ Among the new vegetables of recent introduction Pritchard stands out as one of the finest. A fine early Tomato with large, smooth, globular fruits ripening to a clear scarlet right up to the stem end. The flesh is deep red and the fruit has few seeds and no core. Like all early tomatoes it amply repays liberal fertilizing to secure the largest yields. Pkt. 15c; § oz. 35c; oz. 60c; § lb. $1.75.

**Second Early and Main Crop Tomatoes**

897 Crimson Cushion or Beefsteak. The largest of the bright red Tomatoes, very solid and smooth. Similar to Ponderosa, except in color which is rich crimson. Pkt. 10c; § oz. 30c; oz. 50c; § lb. $1.50.

910 Globe, Dreer’s Select Strain. The fruits are perfect globes in shape. They average 6 inches each and are borne in clusters of 4 to 6. It is among the most solid of all Tomatoes. The skin is an attractive pink or purple and the deep red flesh has a delightful flavor. Our strain is extra choice. Pkt. 10c; § oz. 30c; oz. 50c; § lb. $1.50.

912 Golden Ponderosa. Very large fruits of splendid quality. Solid, rich golden yellow flesh of very mild flavor. Most attractive when sliced and served with a red variety. Pkt. 15c; § oz. 35c; oz. 60c; § lb. $1.75.

926 Marhio Tomato

A beautiful and choice new, dark rosy pink selection from the well known Marglobe embodying its wilt-resistant qualities. Equally suited to growing outside or under glass. The round fruits have a beautiful thin pink skin and deep pink flesh. Not only most attractive but has proved an enormous cropper under varying growing conditions. Pkt. 10c; § oz. 30c; oz. 50c; § lb. $1.50.

923 Marglobe. This fine second early produces large, smooth, meaty, globular, red fruits which ripen evenly and are free from cracks. An extremely heavy cropper, particularly valuable in districts troubled with rust and wilt as in many of the Southern States, because it is decidedly wilt-resistant. Pkt. 10c; § oz. 60c; oz. 10c; § lb. $2.00.

Dreer’s Hardy Garden Chrysanthemums
The World’s Best Collection

Gorgeous autumn-blooming plants producing a lavish profusion of colorful flowers just at a time when other plants are beginning to fail. They are reasonably hardy if planted in a well-drained soil and covered with leaves or loose litter during the winter. We offer strong young plants.

For a quarter of a century we have been selecting and producing new varieties of Chrysanthemums, constantly endeavoring to increase their desirability and usefulness for garden display.

As newer, better, and hardly varieties appear we are obliged to discard the older ones. You may rest assured that the new ones selected in the same colors have qualities of superiority justifying their trial and adoption by you.

Twelve Extra-Early Double Large-Flowered

While all the varieties offered by us are early flowering, the following twelve splendid, double, large flowered varieties bloom from one to two weeks earlier than the general collection. This feature is of course a very desirable trait as where the seasons are short one can depend upon an abundant display before frost. In other sections where killing frost comes later these extra-early kinds are valuable because they start the blooming season considerably earlier.

Aladdin. Sensational early bronze. Because of its tendency to bloom during the heat, we advise keeping the plant pruned back until early August.

Alleta. Compact free-flowering plants with light pink blooms.

Carrie. A most satisfactory deep canary yellow. Very showy.

Marie duPont. Very dwarf with large pure white flowers.

Tasiva. Large free-flowering pure white of compact growth.

Yellow Normandie. An early yellow with large blooms.

Twelve Extra-Early Double Large-Flowered

Any of the above: 25¢ each; $2.50 per dozen.

Twelve Small Aster-Flowered and Pompons

Under ordinary culture and without disbudding these small Aster-Flowered and Pompon varieties will produce blooms less than two inches in diameter. Their small size does not in any way detract from their effectiveness in the garden due to the fact that they bloom with the greatest profusion. When cut they give dainty clusters of graceful flowers which are particularly useful for table and room decoration. This class includes some of the great favorites of many gardeners.

Korean Hybrid Chrysanthemums

Korean Hybrid Chrysanthemums, first offered a few years ago, enhanced the attractiveness of this class of plants by adding greater hardiness and much grace to the assortments previously in commerce.

Since their first introduction there have been many improvements and variations, all worthwhile. We recommend this type heartily with full confidence in their giving you much useful service.

Dreer's Ten Extra-Early Korean Hybrids for 1936

These ten extra-early flowering Korean Hybrids, introduced by us in 1936, have won universal acclaim. In 1937 we were unable to fulfill the demand. Their principal virtue lies in their flowering ten days to two weeks earlier than the general assortment of this type.

Clio. Dwarf compact plants of pleasing habit producing masses of deep carmine-rose duplex flowers.

Fortuna. Very vigorous plants of medium height covered with unique curly petaled oxblood red flowers, 3 to 4 inches in diameter.

Psyche. Dainty single lively shell pink flowers produced freely on wiry stems.

Sappho. Compact dwarf plant with an abundance of single yellow flowers.

Thalia. A compact bushy plant growing 18 to 24 inches high. The duplex flowers are of a light orange shade and of excellent form.

Vesta. A plant of medium height and great vigor, literally covered with deep golden orange flowers over 2½ inches in diameter.

Six Original Korean Hybrids

Two Most Remarkable

Hardy Gaillardias

Dreer’s Roses
for the Garden

Strong, budded, 2 year-old, field-grown plants

Specially Prepared in Pots for Outdoor Planting

Dreer’s Roses have a world-wide reputation. While our old customers are familiar with their excellent quality we wish to direct the attention of those who have never planted Dreer’s Roses to the fact that our special treatment of the plants during the wintertime is a most important factor that insures success. Dreer Roses are dug in the fall, planted in pots, and stored in cold greenhouses or coldframes where artificial heat is used only to exclude severe frost. During the latter part of March these potted plants are moved to the open where they will start into growth in a natural manner.

Potted Roses by Mail

Not more than two potted Roses can be forwarded by mail on account of their weight. Add 10% (15% west of the Mississippi) of their value to cover postage and special packing. Minimum charge 10c. Quantities of three or more are sent by express, purchaser paying the transportation charges.

Shrub Roses

We group under this heading various types and species of Roses that are of strong habit of growth and will be found especially adapted to plant in mixed shrubbery borders, or in separate beds or groupings, or as individual specimens in the garden.

Rugosa Roses and their Hybrids

Blanc Double de Coubert.   Double pure white.
Conrad Ferdinand Meyer.   Clear silvery rose.
Hansa.   Attractive double reddish violet.
Red F. J. Grootendorst.   Imagine a shrub-like Rugosa Rose covered with trusses of lovely crimson Baby Roses and you will have a fair conception of this fine hybrid variety.   It is valuable to plant as an isolated specimen or in a mass in a bed or in the shrubbery border or may be used as an ever-blooming hedge.   Hardy, and continues to bloom until late in the fall.
Pink F. J. Grootendorst.   Identical with the preceding variety, except in color, which is a splendid clear pink.
Rugosa.   Large single rosy carmine.
— alba.   Large single white.

Any of the above: 85¢ each; $9.00 per doz.

Austrian Brier Roses

A very hardy type which will give the best results with very little pruning, since the flowers are produced from the upper end of the old wood.   This class is noted for its excellent rich tones of yellow and copper.

Austrian Copper.   Bright coppery red; reverse golden yellow.
Harrison’s Yellow.   Fine double golden yellow flowers.
Persian Yellow.   Medium sized, deep yellow, double flowers.

Any of the three: 85¢ each; $9.00 per doz.

Dreer’s Roses

Your success with Roses depends primarily upon the quality of the plants you secure.   Cheap stock invariably is inferior and cannot produce vigorous plants that will support an abundance of large and perfect blooms.   While cheap in the beginning they really are the most expensive in the end because they can only cause dissatisfaction.   After all the slightly higher cost of Dreer’s Quality Roses is a minor expenditure compared with the results they produce.   A few Rose plants of Dreer quality will give you more blooms than twice the number of plants of inferior stock.   But that is not all.   The flowers from Dreer Quality Roses will be larger, better, and they last longer.

We will be glad to forward samples of our superior Roses upon request.

The Roses on this page are all very interesting and lovely.
