Evergreen Trees.

Including the new and rare species recently introduced. The Trees of the older species are of good size, and such as are usually sold; but many of the newest species are of moderate or small size. Amateurs of the favorite family of Evergreen Trees will not fail to notice the great superiority of this collection over any other offered for sale.

Note.—Those which require to be protected in this latitude, by a covering of straw, are designated by an asterisk.

REDUCED PRICES OF STRAWBERRIES.

The following Strawberries have been selected from the varieties that have been brought to notice in this country and Europe, and the others have been rejected. As a general result, all the Hermaphrodite varieties that have been introduced from Europe have proved worthless, on account of their unproductiveness. In fact, it may be taken as a general guide, that Pistillate varieties can alone be relied on for *abundant and regular crops*. A few exceptions exist among the American Hermaphrodites where fair crops are produced; but even these cannot be deemed equally reliable, in all respects, as the Pistillates.

H denotes Hermaphrodites; P Pistillates.

NOTE.—Descriptions of most of these varieties will be found in our General Catalogue, and in the Horticulturist for April, 1853. The varieties we recommend in preference are designated by an asterisk. (*) No less than a dozen are sold of any variety, except those priced per pair.

The following \$2 per pair, and in September at \$1 per pair.
