Explanation of Symbols

The symbols used throughout this book are bound to help you with your garden planning. They make it easy to tell at a glance the character of the plant and their adaptability to various growing conditions.

(A)=Annual. Annual flowers complete their life circle within one growing season. They must be sown every year.

(B)=Biennial. These require two years to bloom. Seed sown during one season will produce flowering plants the second year. Occasionally they live longer than two years.*

[HHP]=Half-Hardy Perennial. These cannot stand much frost but may be kept alive by bringing indoors, placing in the cold frame, or covering securely during the winter.

[HP]=Hardy Perennial. These last for several years, withstanding considerable frost provided the soil is well drained.

[TP]=Tender Perennial. Tender perennials may be kept growing throughout the year in the house or greenhouse. Many of them are showy bedding plants for a summer and fall display.

§=Climbing Plants. Climbing and trailing plants which are best grown with a support on which they can climb.

△=Suited to Rock Garden. Most plants suited to rock gardens are also desirable for dwarf beds and borders. The smaller the rock garden the smaller the plants should be.

◎=Suited to Semi-Shade. Most plants suited to semi-shade also do well in a sunny exposure. Semi-shade means some sun for part of the day or a location where the plants receive ample indirect light from above.

●=Suited to Shade. Few plants do in dense shade but those marked in this way will be found quite satisfactory. There are no annuals which will bloom in deep shade.

+ Seeds marked with a + often are sown in late fall outdoors to germinate the following spring. Spring germination is quickest if they are placed in water and set in the freezing chamber of an electric refrigerator. To secure the beneficial effect of alternate freezing and thawing, thaw them out once a week and then freeze again. They will be ready for sowing after two to three weeks of this treatment.

Dreer's Antirrhinum [®]

The Popular Snapdragons

Snapdragons are great favorites. They are easily grown from seed blooming continuously throughout the summer and fall. If protected during the winter, midsummer sowings will produce particularly fine flowers during the following spring. Just cover them with a bottomless box and a pane of glass over the top. The germination of Snapdragon seed has proved to be easiest if finely sifted coal ashes are used as a seed bed. Prepare your seed pan in the usual way and add a layer of finely sifted coal ashes ½ inch deep on the top. Sow the seed thinly on top of the ashes and water carefully. Keep moderately moist in a fairly warm place until the seedlings appear.

Six Rust-Resistant Maximum Varieties

The development of these new Rust-Resistant Snapdragons is one of the greatest accomplishments ever made by plant breeders. It is possible now to have them grow to perfection even where the old strain has proved a complete failure due to rust infection. These new Maximum varieties grow about 3 feet in height and bear an abundance of long, strong flower stems set with giant blooms of perfect form. To insure free branching, pinch off the tip of the center shoot when several inches high.

1187 Alaska. A very lovely variety with magnificent and stately spikes closely set with mammoth white blooms. Produces from 12 to 14 spikes to each plant.

1189 Campfire. A really marvelous new variety with gorgeous blooms of a pure luminous scarlet enhanced by a bright golden yellow lip. Produces 15 to 18 spikes per plant.

1193 Copper King. A gorgeous blend of copper shades ranging from light coppery gold to deep rich velvety coppery orange. Has 12 to 16 spikes per plant.

1195 Crimson. Outstanding not only for its pure crimson flowers but also for the rich green foliage and dark plum-colored stems. Very vigorous and free flowering.

1197 Loveliness. Pure soft rose-pink flowers of splendid form and extra-large size. Gives a marvelous display with 12 to 16 spikes produced to a plant.

1199 Yellow Giant. The glistening deep yellow flowers give a splendid effect. They are very large and beautifully arranged on a fine strong spike. 12 to 14 spikes per plant.

Bush Lima Beans

Culture—Lima Beans are very susceptible to cold and seeds should not be planted until the ground has become thoroughly warm. Being gross feeders, they should be sown on well-enriched land, with the rows $2\frac{1}{2}$ feet apart, placing the beans six inches apart in the row, **eye down**. In light soil, cover about one inch deep, less on heavier soils. A good fertilizer applied at the rate of 20 pounds to every hundred feet of row, when the plants begin to bloom, will materially increase the yields. Hill plants slightly earlier in the season to hold the pods off the ground. **One pound will plant 50 feet of row.**

111 Dreer's Wonder Bush Lima

75 days. A most desirable Bush Lima Bean because it is early and very productive. The plants are of strong upright growth, heavily laden with large pods many of which contain 4 beans each. Many gardeners pronounce the broad, flat beans superior in flavor to those of the round, thick-seeded varieties. We highly recommend it and suggest that you give it a thorough trial this year. Pkt. 10c; $\frac{1}{2}$ lb. 30c; lb. 50c; 2 lbs. 90c; 5 lbs. \$1.95, prepaid.

107 Fordhook Bush Lima

75 days. This variety is well known wherever Lima Beans are grown as it combines productiveness with choice quality. The plants make a vigorous, upright growth so that the pods are held well above the soil surface. This keeps them clean and avoids rust and rot even during wet seasons. The pods are borne in clusters which accounts for the productiveness of this splendid variety. Each pod is about 5 inches in length and contains 4 or 5 very thick, light green, oval beans which have a distinctive rich nut-like flavor quite unlike any other variety. Pkt. 10c; $\frac{1}{2}$ lb. 30c; lb. 50c; 2 lbs. 90c; 5 lbs. \$1.95, prepaid.

Pole Lima Beans—For Extra-Heavy Crops

Culture—Pole Limas are even less hardy than the Bush type and should not be planted until toward the end of May or when all danger of frost is past. Set the poles about 4 feet apart each way and plant 6 to 8 beans, eye downward, around each pole. When plants are up, thin out to 3 plants to a pole. Pinch off the ends when plants overrun the top of the poles. It is good practice to use a shovelful of rich, light, well-rotted compost to each hill. **One pound of seed will plant 75 to 100 hills.**

Onion Seed

Ognon, FR.
Cipolla, ITAL.

Cebolla, SP.
Zwiebel, GER.

One ounce of Onion seed for 100 feet of drill, 5 to 6 pounds for an acre.

Culture—Seeds may be sown early in the spring in rows 18 inches apart, and as soon as seedlings are 3 to 4 inches tall they should be thinned out to stand 3 to 4 inches apart in the row. Pull when tops begin to die down, cure, and use, or store in a cool, dry place. By sowing seed of the Spanish type, such as Prizetaker and the Southport Globes, under glass in February or March and transplanting in April to open ground 3 to 4 inches apart in the rows bulbs of immense size may be produced.

The Best Red Onions

The red-skinned Onions are by far the best winter keepers lasting well into the spring, far beyond the time that any of the white or yellow varieties could be kept in good condition. They mature rather late, have solid flesh, and their flavor is stronger than any of the others.

580 Large Red Wethersfield. 110 days. A well-known variety with very large thick flat onions having a bright purplish red skin. Solid flesh, shaded pink near the skin. Pkt. 15c; $\frac{1}{2}$ oz. 55c; oz. 95c; 2 oz. \$1.60.

582 Southport Red Globe. 120 days. The Southport Globe Onions are all very popular and this splendid red-skinned variety is no exception. The onions are perfectly round and have an attractive red skin and white flesh. Pkt. 15c; $\frac{1}{2}$ oz. 55c; oz. 95c; 2 oz. \$1.60.

The Leading White Sorts

The white-skinned onions are much milder in flavor than yellow or red ones but they do not keep so well.

584 Southport White Globe. 120 days. A well-known standard sort of medium size, perfect globe shape, with pure white skin. White, fine-grained flesh of fairly strong flavor. Pkt. 15c; $\frac{1}{2}$ oz. 55c; oz. \$1.00; 2 oz. \$1.75.

588 White Bunching. This variety does not form bulbs and it is grown exclusively for green onions or scallions. Sow the seed thickly in rows and earth up gradually to blanch the stalks as far up as possible. Pkt. 15c; $\frac{1}{2}$ oz. 55c; oz. \$1.00; 2 oz. \$1.75.

590 White Portugal or Silver Skin. 100 days. Attractive large, flat, pure white onions. A good keeper, also valuable for pickling and bunching. Fine-grained flesh of mild and pleasant flavor. Pkt. 15c; $\frac{1}{2}$ oz. 55c; oz. \$1.00; 2 oz. \$1.70.

594 White Sweet Spanish

110 days. By far the largest of the Globe-shaped white varieties. It resembles in form and size the pale yellow Valencia except that the color of the skin is a pure transparent white. The flesh is firm yet tender and it has an exceptionally mild and sweet flavor. Under favorable conditions individual onions of astonishing large size can easily be grown. Even under average conditions they reach exceptional size. Yet they are always of sweet mild flavor. Pkt. 15c; $\frac{1}{2}$ oz. 55c; oz. 95c; 2 oz. \$1.60.

Garden Peas

Guisante, SP.
Erbsen, GER.

One pound will plant 100 feet of drill.

Smooth-seeded peas can be sown as early in the spring as the ground can be prepared. Subsequent frost does not hurt them. Shrubs are as much a part of the well balanced garden as a lawn or flower border. Many of them are as decorative as any ornamental foliage plant, while others are highly attractive on account of their flowers. In the well arranged shrubbery border there always will be something of interest no matter what the season of the year. They have many uses such as a dividing line between the flower and vegetable garden, or between the lawn and uncultivated land beyond; as a background to a flower garden; for hiding an unsightly fence or foundation. As height varies according to condition we give the approximate height as follows: D=Dwarf (less than 4 feet tall); M=Medium (4 to 8 feet tall); T=Tall (8 feet and taller).

Directions to Customers

Name and Address—Please remember to write on each order and letter your full name, Post Office, County, and State. Also give the street name and house number, or P. O. Box besides the nearest Express Office.

Cash With Order—Remit by Post Office Money Order, Express Money Order, Draft, or Check. If you send cash, register your letter. We cannot be held responsible if these directions are not followed. If you request goods which are "Not Prepaid" to be shipped by Parcel Post please include in your remittance the cost of postage and special packing as explained below. We decline sending goods C. O. D. (Collect on Delivery). Prices subject to change without notice.

Packing—No charge is made for boxes or packing on express or freight shipments nor for delivery to freight depot or express office in Philadelphia. The extra cost of "special packing" for parcel post shipments of plants and roots is included in the charges noted below.

"Prepaid" and "Not Prepaid" Shipments in the U. S. A. and Possessions

(For Canada and Foreign, see below)

Seeds and Bulbs Sent "Prepaid"—All Vegetable Seeds, Flower Seeds, Bulbs, and Lawn Grass Mixtures are sent "Prepaid" to any Post Office in the United States or its possessions, or at our option by Express or Freight Prepaid. Customer bears the cost of transportation on all other articles.

Plants and Roots Forwarded "Not Prepaid"—All Plants and Roots are forwarded "Not Prepaid" by Express which means that the customer pays the cost of transportation. Plants and Roots that can be sent by Parcel Post as noted in the catalog will be mailed if you add to your remittance for postage and special packing:

10% of their value, east of the Mississippi
15% of their value, west of the Mississippi
Minimum charge 10c

We recommend to our customers to have their Plants and Roots forwarded by Express as our experience shows that this method is usually the most satisfactory, except on small packages.

Sundries—Sundries, except where quoted "Postpaid," are sent either by express or freight the purchaser paying transportation charges. Shipments by express offer the safest and quickest method of transportation but they are also more expensive than freight. If undecided you may safely leave the method of transportation to our judgment, otherwise please state on your order whether they are wanted by express or freight.

Local Delivery—There is no charge for delivery of goods in Philadelphia and immediate suburbs.

Shipment by Steamboat—Fast lines of Steamship connect Philadelphia with Baltimore, Boston, Jacksonville, Miami, and Savannah. This forms a convenient, cheap, and safe method of transportation for heavy goods except during severely cold weather.

Plants by Railroad Freight—Shrubs, Hedge Plants, and other dormant stock can be forwarded by fast freight even to distant points.

Canadian Shipments

Flower Seeds and Bulbs are sent "Prepaid." The complicated regulations concerning the importation of Vegetable Seeds from the United States into Canada force us, much to our regret, to decline all orders of Vegetable Seeds to be sent into Canada. All other goods are sent "Not Prepaid" by Express or Freight purchaser paying all transportation charges as well as customs duties. Recent legislation prohibits the importation into Canada of practically all kinds of nursery stock, plants, bulbs, corms, tubers, dormant roots, rhizomes, including Gladiolus, Cannas, Dahlias, Peonies, Roses, etc. Remittances from Canada must be made in U. S. funds.

Foreign Shipments

Foreign Customers will please remit in U. S. Funds. Flower Seeds, Vegetable Seeds and Bulbs quoted "Prepaid" (except Beans, Peas, and Corn) will be prepaid for regular postage but transit and surcharges as well as any costs for Consular invoices or clearance papers are to be included in the remittance. All other goods are forwarded "Not Prepaid." If mailable Roots and Plants are wanted by Parcel Post add 25% of their value to your remittance to cover postage and special packing. Minimum charge 10c. Customs duties cannot be prepaid.

Time of Shipment—All Seeds, Dormant Roots, Bulbs and Sundries are forwarded as soon after receipt of order as possible unless shipment at a later time is requested on the order sheet. Hardy Plants for the garden (Perennials, Shrubs, Hardy Vines, etc.) will be shipped at proper planting season unless otherwise specified on the order sheet.

Safe Arrival of Packages—We guarantee safe arrival of all goods sent by express or mail to any point within the United States proper. If such packages are injured or lost we will replace them as soon as notified of the fact. Goods sent in any other way travel at purchaser's risk. Claims for damages or errors must be made on receipt of goods. We cannot be held responsible for failure after delivery of goods in good condition.

The Dreer Guarantee

We guarantee the quality and vitality of Dreer's Seeds, Bulbs, and Plants purchased from this catalog at the prices quoted. If after planting them properly and under suitable conditions they fail to give satisfaction we shall cheerfully replace them at the proper planting time at one-half the original purchase price but you must notify us as soon as the deficiency becomes apparent. Because success depends upon experience, cultural practice, and climatic and soil conditions Henry A. Dreer, Inc., shall in no case be liable for more than the amount actually paid for the seeds, bulbs, and plants.

Drer's September Jewels

These outstanding new Chrysanthemums have proved to be all we said about them last year when they were introduced by us. Seed of them is offered on page 8. In addition we have for 1942 six separate varieties selected from thousands of plants as the most outstanding ones. These are pictured in full colors on page 84. Order your plants of these early as our supply, though plentiful, is likely to become depleted long before the planting season is passed.

Treated Untreated

Treated plant has close to three times the root strength of untreated one.

The Hormone treatment of Dreer's Lawn Grass Seed induces quicker germination and more vigorous growth. The effect is most marked upon the roots of the young plants and as every gardener knows an extensive, well-developed root system is the foundation for a successful lawn able to withstand seasonable adversities and disease. Even with hormone treatment thorough soil preparation, fertilizing, and watering, are still very important.
