SPRING OF 1896.

★ SEP 10 1923

U. S. Department of Agriculture

SEMI-ANNUAL TRADE LIST OF THE RUMSON AND MONMOUTH NURSERIES.

(Established 1854)

(Incorporated 1894)

THE LOVETT COMPANY,

Little Silver.

New Jersey.

Headquarters for

Strawberry-Raspberry,

Japan Golden Mayberry,

Logan Berry, (*Raspberry-Blackberry*),

Sacaline, home grown roots,

Phoenix and Miller Raspberries,

Anna Kennedy and Eleanor Strawberries,

Maxwell's Early and Lovett's Best Blackberries,

Plymouth Rock and Centennial Cherries,

Hardy Orange and Japan Wineberry.

While we exercise the greatest care to have all our trees and plants true to label and hold ourselves prepared, on proper proof, to replace any that may prove otherwise, we do not give a warranty, expressed or implied; and in case of an error on our part, it is mutually agreed between the purchaser and ourselves that we shall not at any time be held responsible for a greater amount than that which was paid for same.

PLEASE OBSERVE :

This list is intended for Nurserymen, Seedsmen, Florists and Dealers in Nursery stock only; and abrogates all previous quotations. In it we offer only such stock as we have in quantity—for other varieties see our Descriptive Catalogues. The prices are for the quantities specified, but six, fifty and five hundred of a class will be supplied at the dozen, hundred and thousand rates respectively. On bills of two hundred dollars or more in one shipment all articles will be supplied at the lowest rates quoted.

OUR NURSERIES

Cover 250 acres of land, with ten large greenhouses. They are located one mile from Little Silver Depot, thirty miles from NEW YORK CITY, five miles from LONG BRANCH and two miles from RED BANK. To reach them **from New York** take the Central Railroad of New Jersey, foot of Liberty Street, or the Pennsylvania Railroad, foot of Cortlandt or Desbrosses street. **From Philadelphia** take the Pennsylvania Railroad, Broad and Market Streets, or the Philadelphia and Reading Railroad, Bound Brook route. In all cases get tickets for **Little Silver** (good on either road). Or the Nurseries may be approached via the New Jersey Southern Railroad and by steamers from New York to **Red Bank**.

THR PACKING SEASON

Usually opens in Spring about the first of March, and in the Autumn about the first of October. All goods are carefully packed in boxes or bales, **for which we make a charge sufficient to cover cost of material.**

OUR SHIPPING FACILITIES

Owing to our proximity to New York City and being located upon the PENNSYLVANIA RAILROAD, the CENTRAL RAILROAD OF NEW JERSEY, the NEW JERSEY SOUTHERN RAILROAD, with Steamboat Lines to New York City, are unsurpassed for securing quick and cheap transportation to all points North, South, East and West.

WHEN NO ROUTE IS NAMED

We forward by the one which in our judgment is the best, but purchasers will confer a favor by naming the mode of conveyance (whether by Express or Freight) and by what route they prefer to have the goods forwarded. *After delivering to forwarders, all articles are entirely at the risk of the purchasers*; and should any loss or delay occur, the forwarders alone must be held responsible. All goods are delivered at Express Office or Freight Depot at Little Silver free of cartage. Parties desiring stock shipped by Express C. O. D. must remit one-quarter the amount of their purchase before shipment.

CLAIMS

If any, must be made within fifteen days after receipt of stock. Should a mistake occur, we wish to be informed of it at the earliest possible moment that the same may be rectified without delay.

TERMS CASH.

We publish the following Catalogues :

Lovett's Guide to Horticulture, descriptive and illustrated, with colored plates, in the Spring of each year, 10 cents.

Lovett's Illustrated Catalogue of Trees, Plants, Bulbs and Seeds, each Autumn, free.

Lovett's Manual of Ornamental Trees and Plants, a large and handsome book of 100 pages, richly illustrated throughout; the most elaborate, accurate and complete of its kind ever issued. With beautiful colored plates, 15 cents.

Pamphlet of Pot-grown and Layer Strawberry Plants, with instructions for their cultivation, each Summer, free.

SEMI-ANNUAL TRADE LIST, Spring and Autumn, for the Trade only, free.

THE LOVETT COMPANY.

Telegraph, Express, Money Order and Post Offices all at LITTLE SILVER, N. J.

February, 1896.

FRUIT DEPARTMENT.

For names and descriptions of varieties see our Descriptive Catalogue. The prices of Fruit Trees are for our selection of varieties, but we will comply with the wishes of purchasers, so far as the position of our stock will permit. We cannot supply lists of selected varieties, either of Fruit or Ornamental Trees and plants, at wholesale rates; but on such orders we will allow the Trade as great a discount on retail prices, as the extent of the order will justify.

PEACHES.

Our stock of Peach Trees is large and exceedingly fine; bright in color, smooth, straight and well furnished. Our stocks are grown from Southern natural stones exclusively, and we grow our trees upon land where Peach Trees have never before been grown. We know our trees to be absolutely free from yellows or any other disease, scale or insect. We invite special attention to our June-budded trees which are large and exceedingly fine.

	Doz.	100	1000

VEGETABLE SEEDS.

FAXON SQUASH.

If to be sent by mail add postage at the rate of 8c. per lb., 15c. per qt., for Beans and Peas, and 10c. per qt. for Sweet Corn.

This, let it be understood, is no longer a novelty as heretofore, but it still remains the best of all squashes for any and all purposes. It is the best early, the best summer and the best winter squash; the best keeping and the best in quality of all squashes of any season whatsoever.

The best living authority upon the Squash recently wrote us, after having grown the Faxon for five years, "it is by far the finest in quality and the best in every way of any squash yet produced." We are headquarters for this unrivalled variety, having purchased the stock seed. Our strain is much the best extant.

NOVELTIES AND SPECIALTIES.

STRAWBERRY-RASPBERRY.

THE NEXT GENERATION.

Indeed a remarkable fruit, which comes to us from Japan. Said to be a hybrid between the Strawberry and the Raspberry; and the plant and its fruit present strong evidence that this statement is correct. In habit it is a spreading, low-growing bush, producing its fruit in branching clusters of three or more at the ends of the stems. The fruit in form and appearance, is about as good a combination of a Strawberry and red Raspberry as one could well imagine—in size about mid way between the two, and the form of neither, but half way between each, being formed of drupes like a raspberry, but in color a crimson, equalling in brilliancy the most beautiful strawberry. Said to be entirely hardy and of delicious flavor. It is in great demand and a fruit so unique, so beautiful, luscious and prolific cannot fail to delight all who plant it. Fine, well-established plants like shown in accompanying figure; doz., \$1.00; 10, \$5.00; 100, \$45.00.

LOGAN BERRY.

A hybrid between the blackberry and red raspberry produced in California and the most valuable addition to the list of small fruits that has appeared during the past fifty years. The berries are very large, fully equaling in size the largest blackberries, which they resemble in form and structure, but are deep reddish-maroon in color; melting, without core, and of rich

FIG. 2174.

sprightly flavor—a mingling of the red raspberry and blackberry, mellowed and refined—as luscious as it is novel; and as firm as a blackberry.

The canes are of strong, vigorous growth with an abundance of large, dark green leathery foliage, resembling that of the raspberry more than the blackberry and are semi-trailing in habit; are without the large sharp thorns of the blackberry, but with numerous fine red spines like those upon red raspberries. *They are entirely hardy without protection and enormously prolific.* A delicious fruit for desert that cannot fail to please the popular palate, and equally desirable for canning. For jellies and jams it is said to be unequalled. What adds special value to this unique fruit is its season of ripening, maturing as it does in advance of raspberries, far in advance of blackberries—and at the close of the strawberry season. At Monmouth the past summer it was fully ripe on June 24—before we could gather the first red raspberries—and continued for a long season, perfecting its last berries and bringing them up to full size.

Having fruited this new fruit in field culture we speak from experience as to its hardiness and other valuable properties. By reason of its many merits we are convinced it is of the greatest value, both for the home garden and for profit.

Strong, well established plants, (see fig. 2174), doz., \$3.50; 100, \$25.00; 1000, \$200.00.

JAPANESE GOLDEN MAYBERRY.

The earliest fruit known, ripening in advance of the Strawberry. A most novel fruit, forming a shrub-like bush six to eight feet high, producing all along its branches large, white blossoms, which are soon followed by large, sweet, glossy, golden, semi-transparent berries. The bushes do

No. 2173.

not die down after bearing like the canes of the Raspberry and Blackberry, but continue to bear fruit for many years like the Currant and Gooseberry. Produced by Luther Burbank of California and is sup-

posed to be a hybrid of a Japanese species of raspberry (*Rubus palmaris*) and the Cuthbert. Our plants were grown direct from the parent stock and are the true variety. They are strong and well established, (see figure No. 2173); doz., \$1.00; 100, \$6.00; 1000, \$50.00. 2 years, field grown plants, doz., \$2.00; 100, \$12.00.

GOLDEN JAPANESE

MAYBERRY

MILLER RASPBERRY.

MILLER

A thoroughly good and reliable early red raspberry! The five most popular red raspberries before the public are Cuthbert, Marlboro, Thompson's Early Prolific, Brandywine and Turner. Miller has now been fruited by many practical fruit growers in field culture, for several years, who have proved it to possess all the merits of all the five varieties named and who affirm it has not manifested a single defect. Of the early varieties that have heretofore appeared, all have either lacked vigor or hardiness of cane and have been unsatisfactory in size or firmness of fruit. The Miller is as vigorous and sturdy in cane as the Cuthbert or Marlboro, with equally abundant and luxuriant foliage, producing berries almost as large and as profusely as either; as early in ripening as Thompson's Prolific, as beautiful and brilliant in color as the Brandywine, which it surpasses as a shipper; and in sweet, luscious flavor and hardiness fully equal to Turner—just what we have all been wanting so long but never until now been able to obtain. Nothing in the way of red raspberries since the advent of the Cuthbert can be compared with the Miller in point of value, except Phoenix.

TRANSPLANTED. Cut 1947. SUCKERS.

We now have much the best stock in the country of this grand Raspberry. The above cut (1947) correctly illustrates the style of plants we offer.

Transplanted plants, (See No. 1, Cut 1947) 100, \$2.50; 1000, \$20.00.

Sucker plants, (See No. 2, Cut 1947) 100, \$2.00; 1000, \$15.00.

PHOENIX RASPBERRY.

All market growers, and all well informed amateurs, know how desirable and valuable a raspberry would be with *fruit* equal in high quality and as a shipper to the grand old Hudson River Antwerp, as prolific and of *ironclad* hardiness. This is just what we have in the Phoenix. Although there is no indication in leaf or cane of

Antwerp blood in it, yet the fruit, in high quality and size, is fully equal to it and by far more beautiful in color. In no other red raspberry have we ever found such lusciousness as in this and the H. R. Antwerp, or such superior shipping properties, being rich and juicy yet so firm as never to crumble or bleed. In cane the Phoenix is the acme of productiveness and hardiness. It is *much more prolific* than the Antwerp ever was, and the most productive red raspberry we have ever fruited. The form and size of the berries are accurately shown in the illustration which is a study from Nature without exaggeration; and the berries retain their full size to the end of the season. The canes endure the most severe winters uninjured to the tips.

In Miller we have a close approach to the ideal early red raspberry. Phoenix is, however, far superior to that splendid variety; owing to its delicious quality, greater productiveness and beauty, and being fully equal to it in earliness, hardiness, size and firmness. It affords us the utmost pleasure to state, after having subjected it for several years to the most rigid trials possible, we believe it to be the most meritorious raspberry yet offered: surpassing in value Cuthbert, Hansell and Golden Queen—all of which were introduced by us. We now offer it for the first season. Doz., \$1.50; 100, \$10.00; 1000, \$90.00.

JAPAN WINE BERRY.

A robust growing plant, perfectly hardy and among the most enormously prolific of all the small fruits. The berries are borne in large clusters, and each berry is at first tightly enveloped by the large calyx, forming a sort of burr, which is covered with purplish red hairs so thickly as to present the appearance of moss rosebuds. These gradually open and turn back, exposing the fruit in all its beauty. The berries are of a beautiful, translucent appearance, running through all the shades of amber to crimson as they ripen. In quality it is quite distinct but a decided brisk subacid. When cooked it is grand, retaining its rich and sprightly flavor, and surpassing when canned or preserved, even the Huckleberry. For jelly making it is without an equal. From it a most delicious and healthful wine can be made with the utmost ease, after the manner of currant wine. It begins ripening in July, the berries are produced in great abundance, and it continues in bearing for a long time. It is proving extremely profitable as a market fruit with some growers, owing to its enormous yield and its ready sale at high prices in market prices.

It is now being employed by several landscape gardeners throughout the country with most happy results.

Good tip plants; 100, 75c; 1000, \$5.00.

Transplanted plants; 100, \$1.00; 1000, \$8.00.

Seed; oz., \$1.50; ½ lb., \$4.50; 1b., \$15.00.

ANNA KENNEDY (P).

The Most Beautiful Strawberry ever Produced.

In 1884 and 1885 our J. T. Lovett produced from crosses made by him between the finest varieties then in cultivation and from selected specimens of fruit, three thousand seedling strawberries. As they came into bearing many of them proved to be exceedingly large, luscious

and handsome, and were given names—numbering several hundred distinct sorts. With the exception of about a half dozen, all have now been discarded by reason of some defect—in many instances but very slight defects—in fruit or plant. Of the few retained the Anna Kennedy has ever been one of the most valuable of all these seedlings. Our records show it to be a cross between Jersey Queen and an unnamed seedling. It first attracted attention by the great beauty of plant—the foliage being large with almost round leaflets which glisten in the sunlight after the manner of the true Laurel. It is also extremely sturdy and vigorous. But the fruit is what is truly wonderful. The almost globular berries are as smooth and regular as though moulded, of the most intensely brilliant flame-color imaginable and so glossy that the light plays upon them and is reflected as with jewels. During the ten years we have fruited this variety we have yet to find a cockscombed or ill-formed

berry. In addition to its marvelous beauty it is extremely rich, sweet and sprightly, medium to large in size, and firm. The plant is the perfection of vigorous and luxuriant growth, enduring and prolific. Ripens in mid-season. 100, \$3.00; 1000, \$25.00.

ELEANOR.

The Largest and Best Very Early Strawberry.

For a long time fruit growers and amateurs alike have been looking for a strawberry that was both large and very early, possessing also the necessary properties of vigor and productiveness of plant, and firmness, fine appearance and good quality of fruit. The Eleanor is second to none in earliness, ripening with Crystal City and in advance of all others; in size rivalling the Sharpless, retaining its size well to the end of the season; in productiveness surpassing the famous Crescent; in firmness equal to the Wilson, is of bright scarlet color and has few equals in quality. Among other valuable properties of the Eleanor may be mentioned its uniform size, color and shape, never cockscombed, and coloring evenly all over with no green tip, a strong staminate or perfect blossom, and especially its vigor; a field of it after picking season being as green as a field of clover, when all other varieties are sere and brown. 100, \$2.00; 1000, \$15.00.

PLYMOUTH ROCK CHERRY.

All growers of light colored or so-called amber cherries are well aware of the two great difficulties to be met, namely: the birds taking the fruit and the tendency to quick decay when ripe. The Plymouth Rock is an amber variety and although showy and of excellent quality will keep in good condition when ripe, longer than any other variety—whether gathered or upon the tree. For some unaccountable reason its fruit is never molested by birds. The cherries are large, bright amber, largely overspread with carmine, sweet, rich, sprightly, juicy and tender, with small stone. The tree is a vigorous, clean, beautiful grower with abundant foliage, begins bearing young and is a heavy annual bearer.

We have known the variety for six years and as a desirable variety for the home grounds it is without an equal; but its greatest value is for market growing—for there is nothing in the way of cherries that can be compared with it as a variety for profit.

First class, 3-4 inch up, doz., \$3.50; 100, \$25.00. Medium, 5-8 to 3-4 inch, doz., \$3.00; 100, \$20.00,

CENTENNIAL CHERRY.

The most remarkable, and perhaps valuable, characteristic of this fine Cherry is its wonderful firmness of flesh, being so enduring in texture that it can be kept in perfect condition for a long time. On two occasions ripe specimens sent us by mail from California were not only received in good condition, but remained so for several days after arrival. Ripe specimens have been kept in an ordinary room for a month after gathered and were still in eating condition. In addition to its remarkable keeping properties the fruit is of immense size; beautiful amber shaded red, with very firm yet tender flesh; sweet, rich, luscious. It is a seedling of Napoleon Bigarreau, which it resembles in appearance, but is much larger and more obovate in form. Tree an extra good, straight and handsome grower. Its sweetness is very pronounced, being exceedingly sugary. Ripens in midseason.

First class, 3-4 inch up; doz., \$2.50; 100, \$15.00. Medium, 5-8 to 3-4 inch, doz., \$2.00; 100, \$12.00.

MAXWELL'S EARLY BLACKBERRY.

Root Cutting Plants. Fig. 902.

We are more pleased than ever with this blackberry. Its large size, extreme earliness and other good properties make it very valuable. It is as large as Wilson's Early and much earlier. Added to these qualities it is sweet, rich and luscious; melting in the mouth—no core whatever. It ripens before strawberries are gone and in company with Lucretia Dewberry and Early Harvest Blackberry, and is three times as large as the latter. The canes are exceedingly prolific, very rigid, stocky and strong, and free from rust, double blossom and all other diseases. It is also much hardier than

Wilson or Early Harvest. A berry so large, early and healthy as Maxwell's Early cannot fail to meet with a warm reception by fruit-growers everywhere; and will be extensively planted as soon as its merits become known. Market growers who are mourning the decadence of the popular Wilson's Early will find in this a very desirable substitute.

Root cutting plants, (such as are shown by fig. 902), 100, \$2.00; 1000, \$15.00.

LOVETT'S BEST BLACKBERRY.

Lovett's Best has now been fruited in all parts of the country—North, South, East and West—and the universal verdict of fruit growers and horticulturists is that it is the *best*. It is a thoroughly reliable Blackberry of large size, with a cane of ironclad hardness, and unites not only these two invaluable properties in an eminent degree, but possesses in addition the merits of ripening early, great productiveness, entire freedom from disease and double or rose blossom, strong, vigorous growth of cane, extra high quality, jet black permanent color and fine appearance. It ripens early and continues to bear until the close of the season. It is the *best* Blackberry for the fruit grower and the *best* for the family garden. The past severe winter it was the only variety producing large fruit that was not badly injured in cane.

Fine root cutting plants (see Fig. 902 preceding page)
100, \$2.00; 1000, \$15.00.

AQUATIC PLANTS.

We have a large supply of very fine plants of the following Water Lilies and other aquatic plants. Please write for special rates for large lots.

Egyptian Lotus (*Nelumbium speciosum*), strong roots, each, 35c; doz., \$3.50; 100, \$25.00.

Nymphaea alba candidissima, ea., 35c; doz., \$3.50; 100, \$25.00.

" **marliacea chromatella**, ea., 35c; doz., \$3.50; 100, \$25.00.

Nymphaea odorata, doz., \$1.50; 100, \$8.00.

" " **gigantea**, doz., \$1.50; 100, \$10.00.

" " **minor**, doz., \$1.50; 100, \$8.00.

" " **rosea**, (*True Cape Cod Water Lily*), ea., 30c; doz., \$3.00; 100, \$20.

" " **sulphurea**, ea., 35c; doz., \$3.50; 100, \$25.

Water Hyacinth, (*Euchornia crassipes major*), doz., \$1.00, 100, \$5.00.

Parrot's Feather (*Myriophyllum proserpinacoides*), doz., 75c; 100, \$3.50.

Papyrus antiquarum (*Egyptian Paper Plant*), Doz., \$2.00.

HYPERICUM MOSERIANUM. (Hybrid St. John's Wort).

This is one of the greatest additions to our list of hardy perennials made in recent years. The plant is of a shrubby character growing about three feet high with age; covered with smooth, handsome foliage. During summer and fall it is literally buried under masses of glittering golden yellow flowers more than two inches in diameter and of a peculiar shining satiny texture, with an odd and beautiful mossy centre. It is a plant for everybody.

1 yr., doz., 75c; 100, \$5.00. 12 to 18 in., strong, doz., \$1.25; 100, \$8.00.

SACALINE.

No other forage plant has ever created such widespread discussion as Sacaline. Much that has been said of it, especially by the enemies of the plant, has been pure speculation. Facts are, however, becoming established and while it has not been proved that it will yield 180 tons of forage per acre annually, as claimed, yet the statement that it will become a noxious weed has been proved false; as it cannot be induced to produce seed with us. That cattle and horses will eat it, both in the green and dry state, without coaxing, has been conclusively proved also. Its ability to grow and flourish during prolonged drought, when all other forage plants fail utterly, has likewise been proved the past summer—rendering it of value that cannot be estimated, in the West and Southwest at least, where the cattle interests are so great. But discussion and

difference of opinion will, we fear, continue for a long time—in fact we are very much afraid Sacaline will have many enemies, and from no defect in the plant itself, the *true* Sacaline; but by reason of so many seeds and plants of worthless kinds of *Polygonum* having been sent out for it. We have no way of knowing accurately but from the best sources of information at our command, we are forced to the conclusion that there have been more than double the amount of spurious plants and seeds distributed throughout the United States for Sacaline than there have been of the genuine species, *Polygonum Sachalinense*.

The claims made for it are: perfectly hardy—even in Siberia; stands also the greatest heat; ground does not need to be plowed before planting; needs no cultivation, no manuring, no replanting; grows in poorest soil or in wet lands, where no other forage plant will exist. Once planted it stands for an age. Stems and leaves, green or dry, are greatly relished by sheep, cattle and horses. It is more nutritious than clover or lucerne; an excellent soil enricher. Grows fourteen feet high by June and can be cut every month till cold weather. The cultivation of Sacaline is very simple. Plant three feet apart each way at any season.

Home Grown Roots, Strictly True and Pure.

The accompanying illustration is a fair representation of the plants of Sacaline we offer. They are well developed roots with perfectly formed crowns and numerous large, plump, fully matured eyes. They are simply perfect. Best of all we know positively that every one is the genuine Sacaline. None of the importations from Japan, of which we have any knowledge, are pure, but are composed of two or more species—largely the *worse than worthless* *Polygonum cuspidatum*, which so closely resembles the true species.

We have tested the seed we offer and know it to be the true Sacaline and fertile. This is why we cannot offer it at such low prices as some others. It has been re-cleaned and is free of husk or chaff—all pure seed; the only seed of the kind, we are quite sure, that is on the market.

Roots, 100, \$5.00; 1000, \$45.00. Seed, oz., \$1.00; ¼ lb., \$3.00; pound, \$8.00.

BLACKBERRY LILY. (*Pardanthus sinensis*).

A particularly interesting plant belonging to the Iris family. Broad, pale-green, sword-shaped leaves, arranged in a fan-like manner; handsome, star-shaped flowers, rich orange, thickly spotted with brown and purple. The succeeding seed-pods soon split open, exposing clusters of fruit exactly resembling blackberries, which remain on the plant until winter. Especially valuable for grouping among shrubbery and for moist situations. It flowers for a long period and as the seed clusters of the flowers that bloom first are formed before the later ones appear and remain until the following spring, it is an interesting and attractive plant throughout the year. The roots are fleshy and keep for a long time without difficulty. Doz., 50c; 100, \$2.50; 1000, \$20.00.

PINK BEAUTY. Kosteletzkya Virginica.

The plant is a hardy perennial of sturdy habit, attaining a height of three to four feet, spreading eighteen to twenty-four inches and exceedingly floriferous the entire summer and autumn months. The individual blossoms are from two to two and one-half inches in diameter, perfectly flat and almost as regular and round as silver dollars; of the most tender, bright rosy-pink imaginable, with delicate veinings upon the petals; the reverse of the petals being silvery-rose or La France rose color and cheerful lemon-yellow pistils and stamens, producing a harmony of color truly poetical. It is of the easiest culture, succeeding equally well in moist or dry situations and always growing vigorously. The seed germinates quickly; the plants beginning to bloom when a foot high, continuing without interruption until after heavy frost. Pink Beauty is entirely distinct from anything in cultivation. It forms a fleshy rooted plant, easy to handle and mail, and easily kept in good condition. **Plants**, 1 yr., doz., \$1.25; 100, \$8.00; 1000, \$60.00. 2 yrs., doz., \$1.50; 100, \$10.00; 1000, \$80.00. **Seed**, in lithographed packets; doz., 75c; 100, \$5.00; oz., \$1.50; ¼ lb., \$5.00; lb., \$15.00.

HIBISCUS MOSCHEUTOS var. "Crimson Eye."

After many years of careful selection, this variety has become fixed and can be relied upon to come strictly true from seed. It is an elegant plant of rapid growth, stately habit, and striking in appearance; is perfectly hardy, robust, with large, light green leaves, having red stems; and is an incessant and profuse bloomer for six weeks to two months in midsummer. The flowers are of immense size, often exceeding six inches in diameter and are produced in such abundance that a well developed plant will give several hundreds of them in a season. The color is a pure, clear ivory white with a large eye of rich velvety crimson in the centre of each flower; forming a contrast as effective as it is pleasing. It is of the easiest culture and will succeed anywhere. Its growth is so strong and rapid and the foliage so large and abundant that it is tropical in effect and should be used accordingly. The plants bloom the first year from seed, germinate with the utmost freedom and the roots being thick and fleshy are easily handled in mail and express trade.

Like all forms of the Marsh Mallow it is a herbaceous perennial plant and like the species is very hardy and succeeds perfectly on all kinds of soils and in every situation whether wet or dry. Being so striking and so cheap it takes well.

Plants, 1 yr., doz., 50c; 100, \$3.00; 1000, \$25.00. 2 yrs., doz., 60c; 100, \$4.00; 1000, \$35.00. 3 yrs., doz., \$1.00; 100, \$6.00; 1000, \$50.00. **Seed**, in lithographed packets, doz., 50c; 100, \$3.00; oz., 50c; ¼ lb., \$1.50; lb., \$5.00.

CLEMATIS DAVIDIANA.**Bush Clematis.**

A most beautiful and valuable plant attaining a height of about three feet and covered with flowers from July to September. The flowers which closely resemble the Hyacinth in form are a clear, deep blue in color, delightfully fragrant and are borne in large clusters in the axils of every leaf. The foliage, which is abundant, is large, clean and of a rich dark green, rendering it an attractive plant at all seasons. It will give great satisfaction in the border and is useful also for cutting. Of the easiest culture and succeeds on all soils and in almost every location. Strong 2 yrs. roots, doz., \$1.25; 100, \$8.00.

GAILLARDIA ARISTATA GRANDIFLORA.

One of the most brilliant, showy and finest of all hardy plants, and undoubtedly the most magnificent of all the Gaillardias, being gorgeous in the striking effectiveness of its large flowers, which are of the deepest rich red with maroon centre and tips of petals orange. The petals are marked with circles of brilliant crimson, orange and scarlet, in various shades and combinations. It is one of those accommodating plants that succeed on all soils and under all conditions, blooming with the greatest profusion in poor, light soil from June until freezing weather, and enduring with patience any amount of ill treatment and neglect. In

the border or the flower bed, alone or massed it is strikingly handsome and of gorgeous effect. It is deservedly popular and its great ease of culture and abundance of large, magnificent flowers cause it to be generally planted.

Fine 2 yrs. plants, doz., \$1.00; 100, \$6.00.

PLATYCODON MARIESI.

STATICE LATIFOLIA.

Sea Lavender.

A most valuable species, having broad, smooth, beautiful foliage and producing an immense head of delicate lilac flowers, so small and numerous as to resemble mist or spray of the sea. The flowers remain in perfection for a long time upon the plant, and when gathered and dried form an everlasting bouquet—the little flowers retaining their form and color perfectly. It is so exquisitely beautiful, so hardy and so reliable it should be in every collection. Admirable for grouping and planting with shrubby or other herbaceous plants in moist locations where it succeeds best; but it will grow handsomely upon any situation that is not dry and sandy.

Handsome plants, doz., \$1.25; 100, \$8.00.

The *Platycodon grandiflorum*, with its large, beautiful, deep blue bell-like flowers has always been an interesting and much admired hardy perennial; blooming as it does with such great profusion for so long a season. The objection to it has been its tall and sprawling habit. In this variety we have all the beauty of flower and profusion of bloom of the species united with a plant of elegant, very dwarf habit, attaining a height of but six to twelve inches. The star-shaped flowers which are produced the entire summer are three inches in diameter and of the most intense, pure dark blue. Perfectly hardy everywhere and a grand flower in every way. Handsome 2 yrs. roots, doz., \$1.50; 100, \$8.00.

CLEMATIS PANICULATA.

Unquestionably the most valuable hardy vine introduced during the past 50 years. It is neat and clean in habit and its pretty glossy foliage renders it an attractive object throughout the season but in late summer when it is entirely covered with masses of pure white, delightfully fragrant flowers, it entrances all beholders. It is absolutely hardy and thrives without care

or attention when established. The drift of lovely flowers is succeeded by curious tufted seeds which remain during the autumn and into the winter. The growth is healthy and vigorous, a single plant covering a large space in a short time.

Strong field-grown plants. (See fig. 2176), 3 years old, dozen, \$2.00; 100, \$15.00.

PLANT. No. 2176.

ROSA RUGOSA.

This superb shrub is not exceeded in beauty by any we know. It has an abundance of dark green, glossy foliage of great richness and beauty, curiously wrinkled, and grows erectly to a height of from four to five feet. It bears all summer, large rosy-crimson flowers, followed by bright crimson fruits, nearly two inches in diameter, borne in large clusters.

MONARDA DIDYMA.

Bee Balm or Oswego Tea.

PRICES OF ROSA RUGOSA.

Our stock is all field grown upon our own nurseries, and is exceedingly fine in every way.

Field grown, 9 to 12 in.,	bushy, doz.,	\$1.00;	100, \$6.00
" " 15 to 18 in.,	" " "	1.25;	" 8.00
" " 18 to 24 in.,	" " "	1.50;	" 10.00
" " 2 to 3 ft.,	" " "	1.75;	" 12.00

Rosa rugosa alba, field grown, 15 to 18 in., bushy, doz., \$1.50; 100, \$10.00.

Rosa rugosa alba, field grown, 18 to 24 in., bushy, doz., \$1.75; 100, \$12.00.

A most showy and effective variety, producing a mass of large heads of brilliant scarlet flowers nearly all summer. Its foliage is attractive also and is highly and sweetly scented. Of the easiest culture, growing two to three feet high. Excellent for cutting. Doz., \$1.00; 100, \$6.00.

ANEMONES.

Anemone Japonica alba (*Honorable Jobert*). The beauty and purity of the flowers of this Anemone are impossible to properly describe. Unquestionably one of the finest autumn flowers; of thrifty habit and near, compact form. It blooms constantly and profusely from September until frost. The flowers are large, pure white with yellow stamens, and are borne on long stems, appearing as if floating in the air; exceedingly chaste and excellent for cutting and decoration. Strong plants in pots, doz., \$1.25; 100, \$3 00.

Anemone Japonica hybrida. A grand new variety, quite like the preceding except in color of petals, which is of pale lilac rose. Even more beautiful than the preceding, if possible. Strong plants

in pots, doz., \$1.50; 100, \$10.00.

Anemone Whirlwind. A semi-double form of *Anemone Japonica alba* which is supposed to be a cross between this beautiful variety and *A. Japonica rosea*. In general style and habit it is identical with the white Anemone, but is much hardier; is even more free-flowering.

The flowers which are two and one-half to three inches across, have several rows of pure white sepals, and last much longer than the others. Strong plants in pots, doz., \$1.25; 100, \$8.00.

FUNKIA OVATA.

Blue Day Lily.

Exceedingly desirable for its neat and symmetrical habit and easy culture. Adapted to the border, the lawn and rockery. Succeeds either in sunshine or shade and the large flowers are richly fragrant. Should be planted in groups to obtain the best effect.

Grows about eighteen inches high, has dark green glossy foliage and large blue, lily-like flowers in June and July. The broad and handsome foliage is attractive at all times. Doz. 75c; 100, \$5.00; 1000, \$40.00.

HEUCHERA SANGUINEA.

Coral Bells.

Truly a floral gem and one of the most valuable additions to the list of hardy flowering plants that has appeared in a long time. The foliage which is evergreen, is beautifully cut and marbled, and is very abundant. The flowers are borne in large, open, clean-stemmed panicles and are of the most clear, bright, cheerful and charming scarlet imaginable. Although the flowers are small, yet they are so numerous in each panicle and the panicles thrown up in such profusion as to pro-

duce a most brilliant effect. Blooming as it does for a period of several weeks, and as each plant sends up a dozen or more stems of its lovely flowers at a time, some idea of its beauty and value can be formed. It is a charming plant for the border and will give pleasure in any situation as it succeeds everywhere and blooms unceasingly. It forces readily and is exceedingly pretty and interesting and its cut blooms are very useful. Strong plants, doz., \$1.50; 100, \$10.00.

**LYCHNIS FLOS CUCULI PLENIS-
SIMA SEMPERFLORENS.**

A fearful name, indeed, yet a correct one, for it is truly an everblooming, double form of the old hardy *Lychnis* or true Ragged Robin. The flowers are produced in bewildering profusion, are very double, borne upon long bushy spikes and are an exquisite, bright, tender rose in color. Splendid for cutting and one of the easiest of all plants to force under glass or in the house, blooming constantly from October until April. It is one of the greatest additions to the list of hardy perennials that has appeared for a long time, beginning to bloom in early spring and continuing the entire summer. Strong plants in pots, doz., \$1.00; 100, \$6.00.

COREOPSIS LANCEOLATA.

Perhaps the finest yellow perennial grown. It forms a compact clump, of close upright habit with abundant clear green, smooth foliage. The beautiful flowers are two inches in diameter and are carried on smooth stems nearly a foot long. The form is perfect and color a dazzling golden yellow, eclipsing in richness and intensity all other flowers of its class. The plants we offer are the true variety. Doz., \$1.25; 100, \$8.00.

**LYCHNIS VISCARIA SPLENDENS
FLORE PLENA.**

The flowers which are produced in bewildering profusion in summer, are on tall spikes; double and of a pure, bright, rosy-crimson color and pleasantly fragrant. It remains a long time in bloom and its flowers are of great substance. It is one of the most brilliant and valuable hardy plants in cultivation, producing a striking effect when planted in beds. It is sometimes termed Double German Catchfly. Strong roots, doz., \$1.00; 100, \$6.00.

HEMEROCALLIS DUMORTIERI.

Orange Day Lily.

A beautiful plant with handsome sword-shaped leaves and large lily-like flowers produced with great freedom for a long season. Color bright orange yellow. Of easy culture and thrives well in a moist soil and in partial shade. Very effective in the border or shrubbery. Doz., 75c; 100, \$5.00; 1000, \$40.00.

BLUE SPIRÆA.*Caryopteris mastacanthus.*

From every side come words of praise concerning this lovely Chinese shrub. Nothing sent out for years has given such universal and complete satisfaction. The prediction is freely made by the best horticultural authorities that the Blue Spiræa will be universally adopted and soon be planted in every dooryard. It is of singularly neat and clean habit, growing about three feet high and flowers from August until after hard frosts. The flowers are produced in the most astonishing profusion in rich lavender-blue masses, always one of the rarest and most pleasing colors, but especially acceptable late in the season. When cut and placed in water the flowers last in perfection for two weeks and are very attractive with their pleasant, aromatic fragrance and graceful, delicate appearance. It remains in bloom long after the hardiest native flowers have ceased. Insects do not trouble the plant in any manner.

Bushy, field grown plants, 12 to 18 in., doz., 1.25; 100, \$8.00.

JAPAN IRIS (I. Kaempferi).

Nothing can excel the purity and richness of color of the improved Japan Iris. We offer the following very fine varieties and remarkably low rates for fine plants. BLUE DANUBE, violet-blue with yellow centre. BLUE JAY, pale blue delicately lined with white. CHAMELEON, grayish-white mottled with purplish-red. ECLIPSE, deep purplish crimson. EXCELSIOR, violet, veined white. GOLD BAND, pure white, gold banded centre. MAHOGONY, dark red, shaded maroon. PYRAMID, violet-blue, veined with white. ROBT. CRAIG, white shaded with violet. WM. TELL, gray and blue, centre blue and yellow.

Strong roots, doz., 75c; 100, \$5.00; 1000, \$40.00.
Our selection of varieties, doz., 60c; 100, \$4.00; 1000, \$30.00.

GERMAN IRIS.

Have a very large stock of superb varieties of German Iris and offer the following bargains: The plants are strictly true to name and pure. AURORA, golden yellow. BLUE BIRD, violet blue. CELESTE, pale lavender. FLORENTINA, porcelain blue, shaded, and orange-yellow, fragrant, very fine. DONNA MARIA, white, shaded lavender. LA TENDRE, pale violet. PALLIDA SPECIOSA, pale indigo-blue. REBECCA, buff and maroon, shaded with yellow. SAPPHO, blue and indigo. SAMPSON, yellow and maroon, veined white.

Good roots, doz., 60c; 100, \$4.00; 1000, \$30.00. *Mixed for our selection of varieties,* doz., 50c; 100, \$3.00; 1000, \$20.00.

Dwarf Iris (I. nudicaule). Grows but six inches high producing large, violet and purple flowers on short stems in early spring. Doz., 75c; 100, \$4.00; 1000, \$30.00.

GOLDEN FLEECE or JAPAN BROOM.

Genista Japonica.

An exceedingly attractive shrub at all seasons of the year. In June it is literally clothed with innumerable bright yellow Sweet-Pea shaped blossoms, presenting a perfect mass of such intense pure golden yellow as to well merit the name of Golden Fleece. Unlike other species and varieties of *Genista*, which are of stooling habit and only half hardy, Golden Fleece assumes the form of a large shrub, attaining a height of six to eight feet. It ascends in a strong main stem with numerous side limbs, all of which are densely studded with long, tough angular, rush-like branches of the most brilliant and cheerful green imaginable and which color they retain throughout the year. It is also entirely hardy, coming as it does from the north of Japan and having endured repeatedly a temperature of zero unharmed.

Introduced by us and now first offered. For this most beautiful and useful shrub we predict the greatest popularity. The plants we offer are exceedingly well grown, stocky and well furnished. They are twelve inches and upwards in height with abundant roots.

Dozen, 50c; 100, \$8.00.

HARDY ORANGE. *Citrus trifoliata*.

A true orange tree, producing the well-known and deliciously scented orange blossoms, so indispensable for all bridal occasions; and genuine oranges. All this on a tree as rugged and hardy as a pear. Notwithstanding the incredulity with which the announcement of a perfectly hardy Orange, found growing in abundance in the cold northern part of China, was received nearly fifteen years ago, experience has demonstrated that *Citrus trifoliata* is hardy and robust enough to grow and thrive without winter protection wherever cherry trees endure.

These are not empty assertions made to boom and sell the plant: although we have ready 100,000 of these vigorous little orange trees, and have grown them for years without the slightest winter protection. The past winter was particularly severe on young nursery stock in this section, yet our acres of Hardy Oranges were unharmed.

The flowers of this remarkable plant are identical with those of the highly prized edible orange and equally fragrant. They are produced in great profusion throughout the summer and are followed by perfect and richly colored little oranges, which may be used in the manner of lemons; being rather too acid to eat out of hand.

Three years old, 12 to 18 inches, well branched, 100, \$3.00; 1000, \$25.00.

“ “ “ 18 to 24 inches, “ 100, \$4.00; 1000, \$35.00.

TWO GRAND APPLES.

We offer these with the utmost confidence. **GLOWING COAL** is remarkable especially for its large size, great beauty and superb quality. Fruit is enormous in size, ordinary specimens weighing 16 to 20 ounces; one-half of each specimen being bright, glossy red, and the other half an intense scarlet. The flesh is of extra high quality, of a rich yellow color, smooth, refined texture and high, rich, sprightly sub-acid flavor. The tree, like the Kieffer Pear, is an early and heavy bearer as well as a strong grower. Season early in September.

RUBY GEM is not so large as Glowing Coal but in form as perfect almost as though moulded in wax and of the most brilliant red imaginable all over. Flesh, snowy white, tender, crisp, juicy, mild, sub-acid and delicious. Tree even a stronger grower, with abundant foliage, and an enormous and early bearer. Exceedingly valuable either for market or for family use. Season, early autumn.

Price of either variety, 1st class, doz., \$1.75; 100, \$12 00.

" " " Medium, " 1.50; 100, 10.00.

Arundo Donax. HARDY BAMEOO, doz., \$2.00; 100, \$15.00.

Uniola latifolia.

The most beautiful of all grasses, attaining a height of two to three feet, producing in summer an abundance of graceful, drooping panicles of large, flat seed pods, which remain until winter and which produce a most delightful effect as they sway to and fro with the breezes. The grace and beauty of this plant baffles description; it must be seen to be appreciated. Also valuable for cutting and drying for winter bouquets, etc., in which state they are very handsome. Perfectly hardy, remaining in perfection indefinitely. Well established plants in 2½ in. pots, doz., \$1.00; 100, \$6.00. Field grown clumps, doz., \$1.25; 100, \$8 00.

OUR GREAT CANNA NOVELTY.

Extensive field trials during the past summer have demonstrated that Sunbeams Cannas surpasses by far the claims we have made for it. Not only is it the best dwarf yellow Canna before the public but one of the most beautiful and valuable of all Cannas of any color. The plant is remarkably dwarf and compact, always averaging twelve to fifteen inches shorter than Mad. Crozy when grown side by side, (attaining a height only of two to two and one-half feet), and is especially well furnished with heavy, richly colored foliage. But its enormous brilliant yellow flowers are its distinguishing feature. The orange markings upon the petals are so faint as not to be seen at a distance of ten yards and do not in the least impair the glowing golden effect of its great masses of bloom; while the individual flowers are of the largest size, *averaging over five inches across*. They are firm and enduring in texture and are borne in immense solid heads that are freely and constantly produced from early June until frost. Although we bloomed in quantity the past summer all the new and expensive Canna novelties as well as acres of the well known standard varieties, no other Canna gave such a pleasing effect throughout the summer or was so striking in masses of color as Sunbeams.

Strong roots, doz., \$2.00; 100, \$15.00; 1000, \$125.00.

STANDARD VARIETIES OF CANNA.

The following superb varieties of Cannas we grow by the acre and can supply strong field grown roots of them now in almost any desired number. As can be seen by the list below we have discarded all the inferior types, retaining only those varieties of pronounced excellence and value. These roots are in perfect condition and will be shipped immediately or held until wanted, without charge, at the option of the purchaser. We guarantee them to be strictly true to name and unmixed.
