**The Plants We Offer Are Not
Southern Roses**

CLIMBING ROSE NEW BLAZE

The Roses offered in this catalog are northern grown, from Pacific coast areas which produce the Nation's best plants. They are selected plants which qualify as No. 1 grade, the highest standard established by the American Association of Nurserymen. This grading is done after they have been grown for two years on hardy understock.

You will know the difference between these top grade plants, and lower priced plants, when they begin to grow in your garden, where their abundance of fibrous, flexible roots enable them to become established quickly and bloom early.

All these Roses, except some climbing varieties, will bloom in your garden this summer, if planted according to simple directions furnished with the plants. Plant dormant Rose bushes as soon as the soil thaws and dries out enough to be prepared properly.

DELIVERY. All orders for ROSES which total \$3.00 and over for shipment to one address will be delivered prepaid in the USA. With ROSE orders for less than \$3.00, add 35c postage and handling. (No Roses are shipped C.O.D.)

Now—Two Newest Grasses Developed by Research in **Vaughan's** **MERION FORMULA**

The two newest lawn grasses developed by scientific research, both accepted by turf experts as far superior to older grasses, are combined in Vaughan's Merion Formula this year.

To the Merion variety of Kentucky blue grass, which has proved its superiority throughout the northern states, we are adding seed of the newly created Pennlawn Fescue, developed after 18 years' research at Pennsylvania State University and the U.S. Plant Industry station at Beltsville, Md.

Vaughan's offer seed of this new variety for the first time. It brings to Vaughan's Merion formula unique merits which speed the establishment of a thick turf, and insure a permanent cover under varying conditions of sun or shade, light or heavy soil.

In Pennlawn fescue the magic of plant breeding unites the best qualities of all known fescues while eliminating their weaknesses. The result is a strain which excels by 33% all other varieties in tolerance to cold, heat and drouth, in weed and disease resistance and general turf quality throughout the season.

What further improvements scientific research may achieve in lawns no one can tell. But a lawn grown from Vaughan's Merion Formula will represent the greatest advance so far accomplished, far excelling lawns from older grasses in beauty, vigor, disease resistance and economy of upkeep.

Each pound of Formula contains 900,000 seeds of Merion. Its thick turf and distinctive dark green coloring will instantly be recognized by those familiar with it. The supporting grasses, all perennials, will provide a quick cover for the slower growing Merion and protect it in its early stages. When the lawn matures they will help maintain its quality wherever it may be threatened by unfavorable conditions of soil, light, or invasions of disease.

Merion Formula Needs Less Water

Because of its deep roots Merion Formula requires watering less often than other lawn grasses. Turf experts recommend that water should be applied only when the grass has wilted. This condition is easily recognized—the grass blades fold up, look thin, and droop like other wilted plants. Extreme heat may cause temporary wilting during the day, when the soil is moist enough. But when grass looks wilted in the morning, then water well.

Merion Formula Can be Mowed Closely

Merion Formula lawns can be mowed closer without harm than common blue grass. It makes a thicker turf when cut not more than an inch high. And it is resistant to the leaf spot, which often weakens other lawns in the summer.

Merion Formula owners agree that the maintenance of this beautiful lawn takes less time and costs less, than with other grasses. It does not have to be reseeded annually, year after year it grows more beautiful.

Merion Formula Seed Goes 3 Times as Far

Finally consider this: while the cost of its seed per pound is higher, because the supply is less than demand, it takes one-third as much seed to sow the same area. Why wait any longer for your Merion formula lawn?

FOR BENT GRASSES AND OTHER GRASSES SEE PAGE 96

New Tool Speeds Growth on Lawn Bare Spots

S-1069 LAWNOVATER. A lawn cultivator is needed for many jobs, foremost of which is reseedling of bare spots. It can increase the germination of grass 50% to 75% if you sow the seed, then roll the lawnovater back and forth over the surface, to insure good cover and prevent loss from wind, rain and birds. You can break up compaction on an established lawn and let air, water and plant food through the crust which forms on heavy soils. The spiked disks open holes in the soil crust, without tearing the turf. It is a sturdy tool, with a heavily reinforced cast frame, and cadmium plated hard steel disks and shaft.

It is also an efficient cultivator for soil beneath shrubs and perennials where it breaks the soil crust without injuring the roots that grow near the surface. Each \$4.85; prepaid \$5.50.

Ask the Man Who Grows One

Robert Brown, 534 E. Robertson Street, Palatine, Ill., looked about him when the time came to make a lawn around his new house, shown above.

"After talking with my neighbors and seeing their lawns," he writes, "I decided to profit by their experience. One lawn was outstanding, and I learned that it was planted with seed of Vaughan's Merion Formula. I did exactly as the owner did, and the picture shows the results. I am very proud and pleased with my Merion Formula lawn."

New Precision Spreader Saves Money and Work

Vaughan's new spreader saves money not only in its price, substantially below others of its quality, but in its ability to apply top dressing, sow lawn seed, and spread plant food and pesticides with a precision such as only a wheeled tool can approach.

Precision requires accurate controls to release the exact quantity of costly material that should fall.

Vaughan's new lawn spreader is a precision tool. New type oval ports prevent clogging and assure even feed of materials. A forced-feed agitator with nylon bearings gives constant flow and uniform spread. A twist of the handle gives on-off control, and an aperture gauge on the handle assures quick and fool-proof setting of the feeding rate. It has a bright metallic rust-proof shutter.

Selective Killer Rids Lawns of White Clover

No. S471 Vaughan's Lawn Clover Killer. If you have white clover in your blue grass lawn, and do not like it, you probably have discovered that none of the usual weed killers can be relied upon to remove it. That is why we are introducing the first selective formulation for ridding lawns of white clover. White clover formerly included in

lawn mixtures, and cannot be considered a weed. But taste has changed, and here is the spray which will bring your lawn up to date, if you wish. Do not use on bent lawns, which are in general more susceptible to chemical injury than other fine lawn grasses. 8 oz. tin, covers approx. 1500 sq. ft., each \$1.25; postpaid \$1.40.

Vaughan's Formula Z Kills ALL Fungi That Injure Lawns

S-304 When lawns turn brown in summer, hot weather may not be to blame. Turf researchers now agree that fungous diseases often are responsible. Five different types of these parasitic organisms are known to attack lawn grass, their spores (seeds) always present, awaiting conditions favorable to their growth.

How can you tell which of the five is attacking your lawn? It would take a microscopic examination by a trained scientist to make a diagnosis. But Vaughan's now offer a remedy which needs no diagnosis.

Formula Z, is a "broad spectrum" fungicide, a mixture deadly not merely to one fungus, but which kills them all. Whatever type is disfiguring your lawn, Formula Z will prevent its spores from developing, and kill all parasites that have developed.

When fungi attack grass leaves they destroy the chlorophyll which makes grass green. This may or may not kill the plant. When Formula Z kills the fungi the living grass roots quickly send up new leaves, and your lawn is soon green again.

Formula Z contains urea, which stimulates this new growth. Its dark green coloring improves the appearance of the grass during its recovery from the attack. Protective spraying with Formula Z prevents fungi from getting a start. 8 oz., \$2.95; postpaid \$3.25; 5 lbs., \$23.50.

Vaughan's Lawn Weed Killer (2-4-D)

Low Volatile Ester Type

No. S448 Of all the weed killing chemicals, the original discovery, 2,4D, is the most dependable. It does its work with rarely a failure, clearing your lawn of broad leaved weeds, and keeping your grounds free of almost all unwanted plant growths.

Vaughan's Lawn Weed Killer contains 2,4D plus 2,4,5T which make it fatal to woody plants as well as weeds. Poison oak, poison ivy, sumac, cherry, honeysuckle and others are easily exterminated. 8 oz., covers 1,500 sq. ft., \$1.00, postpaid \$1.15; quart, covers 5,000 sq. ft., \$2.75; postpaid \$3.00.

Handy Spreader for Lawn Seed and Chemicals

Kills All Life in Soil

S-210 Vapam Soil Fumigant. All living things in soil, including seeds, fungi and insects, are killed by this fumigant, which simplifies the home gardener's task of preparing soil for seedlings, etc. Two weeks after treatment, it is safe to sow the crop. A sprinkling can is the only equipment needed. Price 1 gallon jug, each \$5.60; 5 gallon drum, for \$24.25 shipped express only.

Best Crab Grass Killer Also Most Economical

No. S-449 Introduced by us two years ago, Vaughan's SODAR® has gained nationwide acceptance among professionals and amateurs as most fatal to crab grass with least injury to lawn grasses, and more economical than others.

The chemical which performs so well is Di Sodium Methyl Arsonate. It can be applied early or late in the season, on young plants or those about to seed. A sprinkling can works well on small lawns, and pressure sprayers on larger areas. One treatment kills young plants, mature plants may need two.

We are so sure Vaughan's Crab Grass Killer doing its job that we offer it on a money-back guarantee. If after two weeks you do not agree that it is the best and most economical crab grass killer offered to date, bring the container back to us or the dealer from whom you purchased it and your money will be refunded. 4 ounce, treats 1,000 sq. ft., \$1.25; postpaid \$1.35; 1 pound, treats 4,000 sq. ft., \$3.50; postpaid \$3.75; 5 lbs., treats 20,000 sq. ft., \$14.75, postpaid \$15.50; 20 lb. drum, treats 80,000 sq. ft., \$55.00, by express collect.

This Plant Food is What Lawn Doctors Order

A fine lawn needs lots of nitrogen to keep it green and growing. The optimum ration which researchers recommend is one pound net nitrogen for each 1,000 square feet, applied once a month during the growing season. Organic nitrogen, which breaks down slowly, releasing nourishment slowly as the grass requires, is favored.

Vaughan's Groganic lawn food fits these specifications. Its formula is 10-6-4, meaning 10% nitrogen, 6% phosphorus, 4% potash. Most of its nitrogen is organic, with the slow break-down which keeps grass growing. Potash and phosphorus are supplied in quantities adequate for grass.

Nitrogen in more frequent doses is preferred by many turf authorities over forms which are applied only once. Experience has shown that during the long growing season there may be a heavy loss in some more costly long-lasting forms, due to leaching (washing away), consumption by soil bacteria, and other causes.

Groganic supplies both quick acting and longer lasting nitrogen derived from a calculated formula of organics, chemicals and minerals. In addition to the primary plant foods trace elements are provided from various organics. It is packaged in convenient sizes. 25 lbs., \$2.95; 50 lbs., \$4.95.

Fatal to All Pests But Safe to Humans

No. S192. Vaughan's Vegetable, Tomato, and Fruit Tree Dust or Spray. When pesticides must be used on edible plants, precautions must be taken which are not essential for ornamentals. Sprays and Dusts must not only be effective against insects and diseases, but safe not only for the user but for those who eat your vegetables and fruit. Scientists have worked hard to develop chemicals which combine these qualities, and we have chosen the best of all for this all purpose mixture. It contains Malathion and Methoxychlor, which will destroy insects of all types, both juice drinkers and leaf eaters. Captan is the fungicide, whose remarkable effectiveness has been proved in many tests. Each of these is present in 5% strength and together they will keep your garden free of all kinds of pests. Use it on fruits as well and on flowers if you wish. There is none safer or more effective. Apply it as dust or spray. 8 oz. applicator gun, each \$1.00; postpaid \$1.20. 12 oz. can, \$1.35; postpaid \$1.55; 3 lb. bag, \$4.20; postpaid, \$4.50.

How to Reach Deep Root Area with Food and Water

S-794 ROSS ROOT FEEDER. When water is applied to the soil surface it does not sink in, but stays at the top until the soil there is saturated. It takes lots of water eventually to reach the root area of trees,

shrubs, and other deep rooted plants. With the Ross root feeder you can place every drop down where deep roots will get it, right away. This gives instant aid to drouth suffering plants, and makes certain that they will not suffer when restrictions are placed on the use of water in your neighborhood. It irrigates and feeds at the same time, if you use the 12 All Purpose cartridges which come with it. Feeder and cartridges complete, \$5.98, postpaid \$6.40.

S-795 Rose Plus Iron cartridges.

S-796 Starter cartridges.

S-797 Acid cartridges.

S-798 All Purpose cartridges. Either, package of 12 cartridges for \$1.00, postpaid \$1.15.

New Lawn AND Garden Aids

Vaughan's Rose and Plant Dust or Spray

No. S276 So many new insecticides and fungicides are now available, few amateurs can keep informed about all. Fortunately there is no need, since it is possible for a combination including the best for each purpose to protect your plants from both insects and diseases.

Vaughan's Rose and Plant Dust, which can also be used in a spray, contains the best of the new materials for the home gardener's use. It contains 7% Captan, the remarkable fungicide which kills Black Spot on roses and other fungi; .675% Karathane, fatal to mites; 4% Malathion, destroyer of aphids and other insects; 5% of the all around insecticide D.D.T. It is safe, stable and sure. 8 oz. Squeeze Duster, which can be refilled, each \$1.39; postpaid \$1.55; 8 oz. applicator gun, \$1.25; postpaid \$1.45; 1 lb. can, \$1.50; postpaid \$1.75.

Vaughan's Pistol-grip Duster is One-hand Pest Killer

No. S707 For protecting small gardens from insects and diseases, dusts have many advantages over sprays. But dusting can be tiring unless you have the right duster.

Our new Pistol-grip Duster is right in economy, accuracy, and ease of handling. You keep it loaded and when your plants are threatened, hold it like a pistol and shoot out a cloud of dust by pulling a 3-finger trigger.

It holds 6 to 8 ounces of dust depending on fineness. An agitator prevents the dust from packing. The easy trigger pull is stepped up by gears to operate the blower. Each \$7.85; postpaid, \$8.00. Pistol-grip Duster with 1 lb. of Vaughan's Rose and Plant Dust (\$1.75 value), both prepaid \$9.50.

Electric Seeder Saves Time and Seed in Garden

S1603. Instead of tap, tap, tapping the seed packet with your finger, you dump the seed into this funnel shaped trough, set the battery to buzzing, and the seed drop one by one as close as you please, as you walk down garden row. It does a better job on seed flats, too. A flash light battery vibrates the feeder. Florists use it for fine seeds. Each, without battery, \$2.85, postpaid \$3.00.

Invisible Iron Curtain Keeps Grass Where You Want It

S-1568 NO-SEE GRASS BARRIER. The line where the lawn ends and the garden border or path begins always poses difficult problems. The grass invades the border, and the edging plants encroach in the lawn and path making it difficult to keep things trim. No-See Grass Barrier consists of corrugated galvanized steel strips 4 inches deep which fit together and are driven down to soil level. This makes a clean division for the border, walk, or crushed stone and gravel driveway. Mow right over it. Package of 40 ft. \$4.98; postpaid to 3rd zone only, \$5.45.

Professionals Use This Drench to Sterilize Soil

S-255 PANODRENCH. With one teaspoonful of this liquid mercury in three gallons of water you can sterilize soil in which you are going to start plants indoors. It contains a dye which identifies the solution. Used instead of steam sterilization to control damping off. Outdoors it can be applied to a seed bed with a sprinkling can or sprayer. 1 oz. bottle, \$1.95; postpaid \$2.05; 4 oz., \$5.95; postpaid \$6.10.

Vaughan's Tree Wound Dressing

S-214 Vaughan's Tree Wound Dressing. Whenever the bark of a tree is cut, fungi which cause decay may attack the wood. This mixture of tars, oil and fungicide will protect the wood from infection. Old injuries showing decay should be cleaned to live wood, and covered. Apply dressing freely in crotches which show decay. Pt., \$1.25; postpaid \$1.45; 1 qt., \$1.80; postpaid \$2.15.

Start Your Plants Early in a Scientific Seed Box

S-1628 It is fun to start seed in an indoor seed box. It also permits you to select varieties from the thousands listed in this catalogue, and grow them for a fraction of what seedling plants would cost, even if you could find the varieties you want in the market, which is seldom the case.

Do not confuse this box with fragile, impractical pasteboard devices. It is made of heavy metal, 12 x 18 in., covered with rust resisting green enamel, and will decorate your living room window. It makes use of scientific methods of growing healthy seedlings—wick feeding of water which keeps the soil always moist; and the use of sphagnum moss to prevent damping-off of seedlings.

Water is supplied through a glass fibre wick with its top in the soil and its lower end in a pan of water. As long as there is water in the pan the soil remains moist. With the box come 54 2-inch plant bands for producing pot plants, wick, and sphagnum moss. You supply the pan. Complete instructions for operating are furnished. Wt., 7 lbs. Each \$3.25 prepaid to 3rd zone (600 miles). Add 45 cents for postage if beyond 3rd zone.

Plastic Bird Feeder will Delight Feathered Friends

S-1725 E-Z FIL BIRD FEEDER.

When this colorful bird restaurant opens for business in a tree near your window the news will spread rapidly among the Cardinals, finches, rose-breasted Grosbeaks, and all the other winter residents of the woods. The entire menu is visible in the transparent plastic seed bin, and customers are assured clean comfort on the open perches. Convenient refilling through sliding door in roof. Comes in mottled green, brown or red. Each \$1.25; postpaid \$1.50.

Supplex 3-Tube Sprinkler Wets Wide Area

S913. Supplex Triple-tube Plastic Sprinkler. Garden sprinklers made of plastic tubes with perforations through which the water escapes in a fine spray, have proved their usefulness. Light, weather-proof, easily curved to follow contours of planted areas, they cover a large space with an evenly distributed spray, which the ground quickly absorbs. This one has three tubes with openings on top only, but can be used as a soil soaker when turned upside down. Made of vinyl plastic, it will not rot or mildew. 25 foot length covers space 25x25 feet, with reel, \$3.98, postpaid \$4.25. 50 foot length, covers space 50x20 feet, with reel, \$5.98, postpaid \$6.35.

Pressure Sprayer is Big, But Not a Burden

S748. Justrite Garden and Lawn Sprayer.

In a pressure sprayer which you carry around the garden, two gallons is a lot of spray but three is too much for a woman to handle with comfort. This well designed 2-gallon job can be used for any purpose which the bigger size would serve, and is not a chore to handle. Complete with high pressure hose, extension and automatic shut off. Each \$9.96, postpaid, \$10.60.

Feeds Plants Through Hose Water

No. S915 HOZON.

Simplest, most practical and widely useful gadget to mix plant food and some insecticides and fungicides with the hose water is Hozon. This siphoning device draws from an open bucket or tub water in which the soluble plant food has been mixed. One gallon of solution is drawn from the pail in about 5 minutes, and diluted with water 12 to 18 times its volume. Hozon siphon is brass, with stainless steel check valve, rubber suction tube and stainless steel strainer. Each, \$2.25, postpaid, \$2.40.

Multiply Costly Woody Plants by Developing Roots on Stems

S1924 Airwrap. Costly magnolias, roses, blueberries, azaleas or any woody plants can be induced to form roots on a selected stem by the Airwrap method which inexperienced gardeners can use. Once rooted the stem can be cut off and planted. Airwrap plastic film is wrapped around a ball of sphagnum moss, surrounding a wound which is prepared with a knife, according to directions. The moss is saturated and the film holds the moisture in, while allowing air to penetrate freely. The film contains necessary growth and rooting chemicals. One kit will make eight new plants. Each, \$1.95. Postpaid \$2.15.

Good Drink Of Kapsulates Makes House Plants Kill Insects

No. S227. Insects which prey on plants can be killed by applying insecticide to the soil. Most successful example is found in sodium selenate, which florists have used for several years, on greenhouse flowers. Do not apply it to food plants of any kind. To insure safety when used with house plants we offer it in capsules, each containing a safe but effective dose for an average pot.

KAPSULATES. Box of 12 capsules, 60c, postpaid. Box of 24 capsules, \$1.35, postpaid.

Hidden Rope Keeps Animals Away from Plants

**No. S290 VAUGHAN'S ANIMAL REPEL-
LANT ROPE.** Dogs, cats, rabbits, may be all right in their place, but you don't want them near your plants. This rope is impregnated with improved and more effective oils which set up a barrier of scent which turns them all away. Circle flower bed or border, or vegetable plot, pegging it on the ground, lightly covered. Tie a piece around an upright tree or evergreen, or hide it in foliage. Animals hate this odor. 100 ft., in can, \$1.75, postpaid \$1.95.

B-23 Greenpod Bush Bean Contender, Pkt., 25c

Best Home Garden Bean

B-23 Green Pod Bush Bean Contender. 49 days. A great introduction for 1950, that was the work of the late Dr. B. L. Wade. This high quality, heavy yielding bean has been setting records in all parts of the country. Amateurs like it because of its fast growth and long, round, tender pods, entirely free from fibre or linen. A continuous supply for the table is assured by sowing every week, three feet of row which will supply abundantly the average family needs. Pkt., 25c; $\frac{1}{2}$ lb., 50c; lb., 95c; 2 lb., \$1.45.

Harvest Many Big Eggs From New Hybrid Egg Plant

El2 Vaughan's Hybrid Egg Plant. 85 days. This is a large fruited variety with larger and darker fruit than Black Beauty. This variety, produces an amazing quantity of large top-quality fruit. In addition to greatly increased yield the bushes show increased resistance to disease. Pkt., 35c.

Lettuce of Bibb Quality All Summer

L-9. Matchless Lettuce. 55 days. Here is the lettuce both gourmets and home gardeners have dreamed about. It has the quality of Bibb, to which professional salad experts give top rating, yet can be harvested all summer from the home garden without loss of quality. In contrast, Bibb bolts to seed with the first warm weather. Matchless matures quickly and a succession of sowings will keep you supplied from early spring until winter. The picture of Matchless herewith was taken in our trials in August, an exceptionally hot and dry one, yet the plants showed no signs of bolting and quality was superb. It grows into a loose cluster of slender leaves shaped like a deer's tongue, thick and crisp, with a heavy midrib, equalling Bibb quality on all counts. We have never seen its equal and believe it is the finest lettuce yet introduced. Don't fail to try it. Pkt., 25c; oz., \$1.00; $\frac{1}{4}$ lb., \$3.00.

L-9. Matchless Lettuce, Pkt., 25c

New Cucumber Has A Smooth Skin

C-161 Cucumber Smoothie. 65 days. All America Bronze medal, 1957. Perhaps you never thought about a cucumber's complexion, but now that the All America judges have pinned a medal on this variety, you will probably agree that a smooth, spineless skin adds attraction, especially to cucumber slices with the skin left on. This is now general usage for the sake of the Vitamins in the green skin. Smooth skin is not the only merit of the new variety. It was bred by J. M. Jenkins at the North Carolina Vegetable Research Laboratory, and has long, slender fruits of top table quality, and if you harvest too many to use in salads, they make fine bread and butter pickles, too. Pkt. 35c, $\frac{1}{2}$ oz., 60c, 1 oz., \$1.00.

R-4 Radish Champion, pkt., 25c

New Zucchini Has Small Bush

S-30 Black Beauty Squash. 60 days. All America Award 1957. Of all summer squashes this variety is the earliest and grows on a bush small enough for close planting. From the time the fruits are $1\frac{1}{2}$ inches long they can be served, and excel in taste and tenderness up to a length of 6 inches. Fruits 18 inches long and 4 inches in diameter are still delicious when cooked the Italian way. Flesh is white, finely textured and skin uniformly dark green. Pkt. 30c; $\frac{1}{2}$ oz., 65c; 1 oz., \$1.15.

Radish Champion Wins A Medal

R-4 Radish Champion. 25 days. All America Bronze Medal, 1957. The first crop from your vegetable garden should be tasty, bright red, firm-fleshed radishes like these. If they give a long harvest, before they turn pithy, you will rejoice. That is exactly why this prize winning variety won a medal. You can sow longer rows, and enjoy a longer harvest from each sowing. It has all the other desirable qualities found in a fast growing, long standing, top grade radish. The tops are short, the tap root thin, and the color of the clearest. They are larger than Scarlet Globe. 1 pkt., 25c; 1 oz., 50c; 4 oz., \$1.50. Roots can be harvested most of the summer if sowings are made every three weeks from April to June, and from August 1 to Sept. 15. Sow only enough at one time to supply your family for three weeks.

Midget Watermelon for Northern Gardens

M-48 New Hampshire Midget. 75 days. All America medal. No sweeter melons ever grew in the deep south, than these midgets, bred for northern summers. This variety is not new, having won an All America award in 1950. Meanwhile it has won acceptance not only by many home gardeners, but by market growers in the north.

As the illustration shows, it is about the size of the largest muskmelons, and so filled with bright red, juicy flesh that the rind is almost paper-thin. Not the least of its merits is its size, which is definitely "ice-box." Keeping it cold is no problem. It is the earliest of the ice-box type to mature. Pkt. 25c; oz., 60c; $\frac{1}{4}$ lb., \$1.75.

Giant Tomatoes in 68 Days

T-21 Early Giant. F1 Hybrid 68 days. For the first time the characteristics of early maturity and giant size have been combined in a tomato. It was accomplished by using the F1 hybrid technique, which has been so successful with sweet corn, and many annual flowers.

For home gardeners this triumph means delight, not only when the first tomato of the season is several times the size of the usual early type, but when the vines continue throughout the summer to yield a prolific harvest of similar giant fruits.

The smooth globe shape of Early Giant is shown in the illustration. The fruits are borne in clusters of 5 or 6. The flesh is bright scarlet, moderately acid with few seeds, just the kind that most salad lovers prefer.

If a man were limited to one vegetable only, tucked in among his wife's flowers, this would be the one to grow, insuring vine-ripened fruits for the table for weeks longer than any other variety could grow. Pkt., 50 seeds, 50c; $\frac{1}{8}$ oz., \$6.00.

Golden Bantam Fans Should Try This Corn

C-101 Bouquet Hybrid Sweet Corn. 75 days. Home gardeners who compare all sweet corn to Golden Bantam, and assert they never have found a hybrid which equaled their favorite in tenderness and flavor, should try this one. No matter what other merits an ear may have, if it is lacking in flavor the gardener who looks forward eagerly to that first bite is going to be disappointed. But not with Bouquet, which besides being extremely sweet and tender, has these other merits: Nine inch 12 rowed ear, with two ears on each 6-foot stalk. It is disease resistant also. Far superior in flavor to earlier varieties, it will give you the first taste of the season of truly delicious corn. We note that it is earlier than Golden Bantam. Pkt., 25c; $\frac{1}{2}$ lb., 60c; lb., \$1.10; 2 lbs., \$2.10.

Carrot Sweet as Honey

C-49 Carrot Sweetheart. 70 days. This well named carrot has a core (call it a heart) quite as tender and almost as sweet as the thick outer layer of its root. The deep orange coloring extends through all the flesh. It has a blunt end, slender cylinder shape, averaging $1\frac{1}{2}$ by 6 inches. Pkt., 20c; $\frac{1}{2}$ oz., 40c; oz., 70c; $\frac{1}{4}$ lb. \$1.95.

Harvest Peas Through July and August

P-17 Wando Pea. 64 days. Where spring is short and summer hot, peas have so brief a season the harvest is counted by days. But here is a wrinkled pea, of excellent quality, which thrives and bears through the hottest summer months. You can plant them late in June for a harvest in September. Sow every three weeks for crops all summer. Excellent for freezing, also. Pkt., 25c; $\frac{1}{2}$ lb., 45c; lb., 75c; 2 lbs. \$1.35.

Heavy-yielding Early Pepper

P-66 Pepper Wisconsin Lakes. 68 days. Research scientist, O. B. Combs, in Wisconsin bred this early maturing pepper, which can be picked in the green stage a week earlier than California Wonder. The plant grows 18 to 21 inches tall and hold the fruits upright, in an easy-to-pick position. In either heavy or sandy soil it outyields later varieties. Fruits ripen to a bright scarlet. Leaves are medium to small, dark green, and the well branched plants shade the stems enough to prevent sunscald. Pkt., 35c; $\frac{1}{2}$ oz., \$1.00; oz., \$1.85.

Only Home Gardens Can Grow This F1 Melon

M-23 Vaughan's F1 Hybrid Muskmelon. 80 days. Here is a melon that has the same hybrid vigor which sky-rockets corn yields, plus a quality so high it will never be found in markets. Its supreme flavor is protected by a light shell which will not stand shipping. It is definitely a home garden variety, early, salmon flesh, pale green netting. 100 seeds, 50c.

Giant Tree Tomato is Still Champion

T-19 Tomato Giant Tree. (Italian Potato Leaved.) 90 days. First offered by us 11 years ago, this was not then a new variety. Its history is obscure but we believe it to have originated in Italy. The interesting fact is that with all the activity among vegetable breeders in recent years, no Fl hybrid or any other new type has ever approached this old variety in the following qualities:

Size, with fruits rarely less than 1 pound, often twice that and many instances of tomatoes weighing over 3 pounds. P. R. Ford of Flint, Mich., in 1950 picked two off one stem, one 3 lbs. 4 ozs., the other 3 lbs., 10 ozs.

Vigor of growth. Our first seed of Giant Tree was obtained from the late Judge Brumley of Flossmoor, Ill., who grew plants that covered an eight foot grape arbor, forming a dense covering over the garden path. Vines 15 feet high have often been reported.

For the average gardener plants of this size are not desirable; but this giant can easily be curbed. When pruned according to standard tomato practice and supported by a stake, Giant Tree will concentrate its vigor on the production of fruits, and keep your table supplied with tomato slices large enough to cover a salad plate.

The fine flavor of Giant Tree attracts as many compliments as its large, smooth fruits. It is definitely non-acid, has very few seeds, and not much juice. It is excellent for canning, if you have cans large enough. The color is classified by tomato fanciers as pink.

If you have grown Giant Tree, there is no need to say more. If you have never grown it, and like tomatoes, don't let another year pass without this interesting experience. Pkt., 50c.

S-24 SQUASH BUTTERNUT. Pkt., 15c.

Squash Fans Agree, This Is the Best

S-24 Squash, Butternut. 100 days. There are several good squashes, so why is this best? First it is easier to grow because of its resistance to stem borer the chief pest of squash. Then it's sweeter, and a better keeper, than even Buttercup, or Acorn; and yields a heavier crop for the space occupied. It has more flesh, less seeds, as you can plainly see; ninety percent of its heavy fruit, which may grow 12 inches long, is exceedingly firm, dry, mealy, delicious orange flesh. Even if you already have a favorite squash, better try this. Pkt., 15c; oz., 45c; 1/4 lb., \$1.25.

A Pumpkin Bred for Jack-o-Lanterns

P-98 Pumpkin Halloween. 110 days. Did you ever try to find a Jack-o-Lantern pumpkin just right in size and shape? It usually means picking over a big pile at the market and then failing to find just what you want. No pumpkin grower ever tried before to breed a race of artistic pumpkins, which would not only produce filling for pies, but also a shell that could be sculptured. The producer of this variety was the first to do this, and his success will delight not only the buyers of Halloween pumpkins but the sellers, who have always been obliged to throw away a lot of big ones which just wouldn't do for lanterns. Pkt., 25c; oz., 50c; 4 oz., \$1.50.

C-108 HYBRID SWEET CORN GOLDEN CROSS. Pkt., 20c.

Hybrid Sweet Corn Team

Plant the four varieties illustrated below at the same time to produce an all season harvest of highest yield and quality. 2 oz. of each variety in separate packets totaling 75¢ 1/2 pound.

We offer a top quality hybrid sweet corn team, including our new super-sweet Bouquet, and the popular large eared late hybrid Ioana. The varieties described below represent the finest quality hybrids available. Plant them for a continuous home garden crop excelling in flavor and tenderness as well as large yield.

C-108 Golden Cross. 79 days. Sweet as Golden Bantam, with much larger ear, this is deservedly most popular of hybrids. Ears are 12 to 14 rowed, nearly eight inches long. Highly resistant to Stewart's disease. Pkt., 20c; 1/2 lb., 55c; 1 lb., 95c; 2 lbs., \$1.80; 5 lb., \$4.25.

C-128 Golden Beauty. 68 days. Silver Medal all America winner 1955. A white silked early large eared hybrid with good quality. Pkt., 25c; 1/2 lb., 60c; 1 lb., \$1.10.

C-101 Bouquet. 75 days. Extra sweet, second early. The cylindrical ears are long and sweet. Pkt., 25c; 1/2 lb., 60c; 1 lb., \$1.10; 2 lbs., \$2.10; 5 lbs., \$5.00.

C-115 Ioana. 81 days. Bright yellow Sweet Corn produced by the Iowa Station at Ames, Iowa. It has a larger amount of foliage than most Corn and has an excellent flavor. Very productive, 87 stalks bearing 123 ears, free from smut. Ear 8 by 1 3/4 inches, carrying 12 to 14 rows of kernels of medium size. Stalk 86 inches in height, ear base 26 to 30 inches. Pkt., 15c; 1/2 lb., 50c; 1 lb., 90c; 2 lbs., \$1.70; 5 lbs., \$4.00.

The New Grandiflora Roses

So many new roses do not fit the classifications already in use, that a new class has been established by rosarians, called Grandifloras.

Merits of both Everblooming Hybrid Teas and Floribundas are combined in Grandifloras, of which the six listed on this page are the outstanding examples so far produced.

In size of flower and length of stem, grandifloras surpass floribundas, but both share the delightful habit of bearing flowers in clusters. More and bigger flowers, on taller bushes, toward grandiflora growers. Plants grow tall enough for background use in borders, while stems even in clusters are long enough for flower arrangements.

BUCCANEER (Pat. 1119) This moderately fragrant, brilliant flashing yellow has lots of pep and is unfading in the hot summer sun. Healthy dark green foliage. **\$2.50**; 3 for **\$6.75**.

OFFER C 1127: One each of the above 6 roses shown in color (value \$14.25) for **\$12.75**.

OFFER C 2127: One each of **Buccaneer**, **Carrousel**, **Dean Collins** and **Queen Elizabeth** (value \$9.00) for **\$7.95**.

MONTEZUMA (Pat. 1383) A remarkably brilliant flower of distinctive scarlet-orange changing to orange-salmon in warm weather. The long tapering buds and the high centered flowers are extremely long lasting when cut. They are borne in profusion on tall free-branching plants. **\$2.75**; 3 for **\$7.50**.

QUEEN ELIZABETH ALL-AMERICAN WINNER 1955 (Pat. 1259) The superb pure orchid pink blooms actually grow richer and more beautiful with age and last longer when cut than any other garden rose. The showy, fragrant blooms are majestically set off with heavy dark green foliage. **\$2.50**; 3 for **\$6.75**.

CARROUSEL (Pat. 1066) A happy rose with perfect dark velvety red blooms, long lasting on the bush and also when cut. Extremely resistant to heat, drought, mildew and blackspot. It was recently awarded The Gold Certificate by the American Rose Society. "in recognition of superior performance in American gardens". **\$2.00**; 3 for **\$5.50**.

DEAN COLLINS (Pat. 1279) "The Lazy Gardener's Rose." So called because it is a "toughy" and will perform beautifully with a minimum of care. The tall plants produce an abundance of brilliant red buds, opening to full double, luminous rose-opal and carmine blooms. The summer heat does not fade this beautiful rose, but intensifies its coloring. **\$2.00**; 3 for **\$5.50**.

ROUNDELAY. (Pat. 1280). The dark red buds open to satiny brilliant red blooms of the best Hybrid Tea form but there will be three times as many. The flowers are produced on long stems, are long lasting and fragrant. **\$2.50**; 3 for **\$6.75**.

The compact 18 inch plants are enhanced with masses of crinkled, holly-like foliage. **\$1.75; 3 for \$5.00.**

*Our Disease-free Plants Reach You
Green and Growing*

Our chrysanthemum plants are grown in pots from rooted cuttings taken from disease free plants isolated in greenhouses. The pots are filled with fine sphagnum moss, according to the method developed by U.S.D.A. scientists. The moss forms a compact ball in which the roots develop. During shipment the moss holds moisture so the plant does not dry out. Plant the moss ball intact, without disturbing the roots. Fill in soil around it, but do not firm this; let it settle slowly. Plants will not be shipped before April 15th in the northern states.

New Flowers

New Red Petunia is All-America Winner

4028 PETUNIA RED SATIN. (F-1 hybrid) 10-12 in. Another red petunia? Yes, and you will agree with the judges that, lovely as the former winners, Comanche and Fire Dance are, Red Satin also deserves a medal. Its compact globe-shaped plants hold their form through the summer, never becoming straggly. Vivid, shining, scarlet-red flowers, 2½ to 3 inches across, are borne in abundance throughout the season. You can expect 30 blooms open at once on every plant. Sun does not fade the color, or dry heat reduce the flowers. It is admirably suited to low beds or borders, or for generously blooming pot plants. Pkt. 50c.

Twinkle, Little Star Phlox 1957 All-America Bronze Medal

4180 PHLOXTWINKLEDWARFSTAR MIXED. This name just fits these little flowers, which cover plants that grow 8 inches high and are slightly flattened on top. The tiny flowers have pointed petals, some zoned with contrasting colors, others with colorful eyes. Colors range from light pink through salmon, rose, rose-pink, mauve, white, wine-red, cerise and crimson in dazzling combinations. This is a flower for edging beds and borders, or planting in masses in front of taller beauties. It decorates pots and window boxes brilliantly. Pkt. 35c.

Illustrated on Front Cover

3183 MARIGOLD DAINTY MARIETTA. With all the charm of popular Naughty Marietta, which it resembles, this petite cousin differs most attractively in size and coloring. Its more compact growth and 10 inch height make it ideal for ribbon planting, yet the stems are long enough for cut flowers. Soft golden yellow blossoms 2 inches across have a maroon blotch at the base of each petal. The crested center can best be described as a small yellow tuft of closely packed wax-like petals with a generous sprinkling of black pepper. In our trials it was in full flower in early July and still gay in late September. Pkt. 25c.

Stocks for Hot Summers

4930 TRYSONIC 7 WEEK STOCKS. Wherever spring is late and short and summers hot, beautiful double stocks have been difficult if not impossible to flower in gardens. Plant breeding magic has changed this with Trysomic Stocks. Trysomic means that three genes in the organs of inheritance concentrate on producing double flowers. In addition, the characteristic of early flowering, possessed by the parent Ten Week Stocks, has been strengthened to give flowers in seven weeks after sowing. In our Chicago trials last summer these stocks were in bloom exactly seven weeks from planting. They have a brilliant color range from white through pink, rose, deep crimson, dark blue and purple. Plants are bushy and branching, 12 to 15 inches tall. Pkt., 35c.

Two-toned Petunia Wins Medal

4029 PETUNIA GLITTERS. F-1 hybrid. All America bronze medal, 1957. If you like two-tone effects you will love this red and white petunia, the first of its color with F1 hybrid vigor and uniformity. As botanists say, it is nana compacta type, meaning small and compact. Eight inches tall, with 2 inch flowers, it is covered from spring to fall with blossoms of Fire Chief red and purest white. For edging or low growing beds and borders it is an ideal subject. Pkt. 50c.

Exclusive — First Dark Blue Hybrid Petunia

4053 PETUNIA SERENADE. (F-1 Hybrid.) Our Exclusive Novelty. First dark blue with hybrid vigor, this has the clear, rich coloring peculiar to hybrids. As dark as Elk's Pride, its color is unchanged in the hottest weather. Cream-white stamens accent its dark beauty and all other colors gain additional brilliance in its company. Flowers are borne in hybrid abundance on dwarf, compact plants. Pkt., 50c.

Fringed Salmon-red Petunia

4046 PETUNIA FIRE DANCE. (F-1 Hybrid.) 15 in. A Giant Single Fringed Petunia, of beautiful salmon-red with golden yellow in its throat. Flowers are 3½ to 4 inches across, and are produced in the abundance usual with F1 hybrids. Plants are uniformly dwarf, base branching and of semi-compact habit, with a spread of 20 to 24 inches. Pkt., 50c.

Pure Cream Zinnia

5885 ZINNIA ICE CREAM. The first giant pure cream Zinnia. Distinctive cactus blooms, up to 5 inches and more in diameter, deep and fully formed. The color is deep enough to be interesting, yet so delicate it combines well with even the most vivid of reds and blues. Pkt., 25c.

Triple Angel's Trumpet

2112 ANGEL'S TRUMPET IVORY KING (Datura). "Crown-in-crown" flowers of that enchanting rich Golden ivory coloring one finds in antique ivory chessmen, which blends perfectly with all other colors. Ivory King is a vigorous growing annual that is in bloom from mid-July until frost. Plants about 30 in. tall, as broad as they are tall. Pkt., 35c.

**225 AGERATUM DWARF GIANT
BLUE TETRA, Pkt., 35c.**

2112 ANGEL'S TRUMPET IVORY KING

Tetraploid Ageratum

225 AGERATUM DWARF GIANT BLUE TETRA.

(Blue Mink) 10 in. A true "tetra" with unusually large flowers, borne on stiff stems that hold them well above the foliage. Grown from seed, the plants are uniform and compact, comparing favorably with the varieties Riverside and Cardinal Mundelein which are propagated from cuttings. A row of this in our Western Springs Trials was a sheet of true Ageratum-blue. While the stems rise well above the foliage, they are not conspicuous, still are long enough to permit cutting for use in low bowls and flower arrangements. Pkt., 35c

1803 CLEOME PINK QUEEN, Pkt., 25c.

Pink and White "Spider Plant"

1803 CLEOME PINK QUEEN. 4 ft. Huge heads of delightful and refreshing true pink. Well branched, airy foliage, blooming from June until frost. Excellent background subject. Pkt., 25c.

1804 CLEOME HELEN CAMPBELL. Large glistening pure white flowers on tall, vigorous, light green stems. A sport from Pink Queen, coming into bloom slightly earlier and with larger flowerheads. 4 ft. Pkt., 25c.

3147 MARIGOLD CRACKERJACK, Pkt., 35c.

New Giants

3147 MARIGOLD CRACKERJACK. Giant blooms, all of which exceed 5 inches in diameter in a full range of Marigold colors—primrose through yellow to gold and brilliant orange. The compact plants attain a height of 30 to 36 inches and carry the giant blooms in full view above the foliage. Flowers well in advance of Early Sunset Giants. A noticeable lack of single flowers, earliness and freedom of bloom combine to make this new Giant Marigold a popular addition to the garden where it can be used for background as well as cutting. Pkt., 35c.

Alyssum Spreads a Violet Carpet

265 ALYSSUM ROYAL CARPET. 4 in. All America Silver Medal, 1953. A rich violet-purple of compact spreading habit. Remarkably uniform in color and growth, the perfect companion to Carpet of Snow (Vaughan's Little Gem). Coming into flower very quickly and lasting throughout the entire season. Pkt., 25c; 1/4 oz., 75c.

Pink Morning Glory

2945 MORNING GLORY CANDY PINK. The first pure pink Morning Glory. Large 4 inch flowers of the brightest rose-pink coloring, clear and sparkling. The bright and cheerful flowers last but one day, though each morning masses of new flowers are born and continuing thus throughout the Summer and until frost. Planted alone, or as a companion to Heavenly Blue Morning Glory this lovely flower will provide a spectacular display when grown on a trellis, or allowed to trail from a planting box or the top of a pillar. Pkt., 25c.

Planted Ballerina and Snowstorm in front of a gray stone wall and in spite of intense heat and very limited watering, they were startlingly lovely. I recommend planting Petunia Snowstorm as a foil for Ballerina, it is very effective. K.J., New Jersey

1443 CELOSIA TOREADOR, Pkt., 25c.

1443 CELOSIA TOREADOR. 18 in. Large velvety combs up to 12 inches across, of lustrous bright red with scarlet highlights. Stems are stiff and sturdy with luxurious bright green foliage. Most plants produce but one stem with one enormous comb, the balance having two or three base-branching stems each with a large comb. Excellent as a bedding plant or for cutting. Holds color well when dried, if stored in a cool dry place away from sun. We suggest combining with Marigold Cupid Primrose (3196), for an unusual effect. Pkt. 25c.

Scotch Violas

8582 SUPER LARGE FLOWERING SCOTCH. Preferred by specialists, Scotch Violas are much larger than Jersey Gem type, all two-toned in lovely clear colors without blotches. In continuous bloom under good culture; sturdy compact growth, outstanding bedding material. Pkt., 25c.

3168 MARIGOLD LEMONDROP. Pkt., 25c.

3168 MARIGOLD LEMONDROP. Early full double canary yellow flower, freely produced on compact plants growing 9 inches tall. This attractive little flower will soon replace Yellow Pygmy as a favorite for the garden border. Pkt., 25c.

For the difficult spot in your garden, try Coleus Vaughan's Rainbow Mixture. Does well in shaded and semi-shaded locations where protection from the bright sun brings out the rich colors. Take a few cuttings from your plants to grow on in the house for winter flowering.

3172 MARIGOLD PRIMROSE GEM. Pkt., 25c

A Gem for Cutting and Edging

3172 MARIGOLD PRIMROSE GEM. A cool, fresh primrose yellow—like captured spring sunshine. Fully double flowers smother the round compact plants. One of the earliest Marigolds to flower, yet was still in bloom when frost came. Plants are about 10 inches tall, perfect for a medium-low edging. Delightful with Blue Ageratum. Equally fine for cutting, as flowers measure 2 to 2½ inches across. Pkt., 25c.

3157 VAUGHAN'S SPECIAL MIXTURE SMALL FLOWERED SORTS. Pkt., 25c.

3167 RUSTY RED. Large fully double flowers, 2 inches and more across, of a rich rusty red, delicately edged golden yellow. The freely produced flowers are borne well above the dwarf bushy plants from early in summer until late into the fall. 1½ ft. tall. Rusty Red blossoms have an irregular outline, which adds greatly to their charm. Pkt., 25c.

3169 MARIGOLD TANGERINE. Distinct shade of bright tangerine-orange. Flowers are double, 2 inches across and completely cover the bushy mound-like plants which grow about 15 inches tall. Early and continuous bloomer. Outstanding in our Trials. Pkt., 25c.

3137 MARIGOLD GLITTERS. Pkt., 25c.

Big Flower, Small Bush

3137 GLITTERS. All America Bronze Medal 1951. It has large clear yellow double chrysanthemum flowered blooms, bushy erect plants, 2½ ft. tall with long cutting stems. Foliage dark green, rich background for the 3 to 4 inch flowers of clear yellow with fringed outer petals. Pkt., 25c.

All the Dwarf Marigolds

A delightful group of highly decorative small flowered marigolds has been developed in the last few years. The increased color range extends from bright yellow to darkest maroon, with many attractive blends of yellow, red and orange. Their great variety lends interest to bowl arrangements and there is no better subject for the cutting garden than a mixture of small flowered marigolds.

3157 VAUGHAN'S SPECIAL MIXTURE of small flowered marigolds, including Gnome, Red Head, Naughty Marietta, Royal Scot, Harmony, Melody, Yellow Pigmy, Scarlet Glow, Robert Beist and others. Pkt., 25c.

New Bright Orange

3125 MARIGOLD HONEYCOMB. Pkt., 25c.

3125 MARIGOLD HONEYCOMB. The florets of this intense orange Marigold are so arranged as to resemble a honeycomb. Early free flowering and entirely without the usual Marigold odor. 2 ft. Pkt., 25c.

Pure Gold Celosia

1451 GOLDEN FLEECE. A pure gold with tremendous plumes for garden and cutting. Easily grown, thrives in all locations and does exceptionally well in hot summers. Pkt., 25c.

1515 CENTAUREA CYANUS DOUBLE ROSIE. Large fully double flowers of rich rose with a salmon overcast. A new color and welcome addition to the Super Giant Cornflowers. Pkt., 25c.

Rosy Bachelor Buttons

1515 CENTAUREA CYANUS DOUBLE ROSIE. Pkt., 25c.

3910 PANSY COLOR CARNIVAL, Pkt., 35c.

American Giant Pansies

3910 PANSY COLOR CARNIVAL. An American bred strain with its hybrid vigor that far surpasses the Swiss Giants in size of flower, depth of color and plant habit. A good range of color including many reds and scarlets, all flowers blotched, giving a brilliancy and depth most satisfying to all. Pkt., 35c.

A NEW CARNATION FROM SEED

1337 CARNATION ORANGE SHERBET. Deeply laciniated petals are striped and flushed with scarlet on an orange-apricot ground. Flowers are large, double and clove scented; freely borne on stiff stems, 15 to 18 inches high. Blooms in five months from seed. We recommend starting seed indoors and setting small plants out as soon as danger of frost is over. Pkt., 35c.

3901 PANSY SWISS RASPBERRY ROSE. Pkt., 35c.

3901 PANSY SWISS GIANTS RASPBERRY ROSE. Pink is a rare color among pansies. This lovely variety is a Swiss Giant, of which the blossoms can be grown to exceed 6 inches in diameter. The color is well reproduced by the illustration; the experts call it raspberry rose. Edges of the petals have a lighter tone, and this, together with the dark velvety blotches on the petals, enhances the charm of the flower. A solid bed of this variety, planted in the shade, can be kept blooming all summer, if the faded flowers are kept picked off. Pkt., 35c.

PETUNIA F-2 COLORAMA (Nana Compacta Mixed)

Home Gardeners Love This Petunia

4033 PETUNIA COLORAMA. Home Gardeners have showed us that they are fussy about colors in mixed flower seed. In the past, they have not liked mixtures of separate varieties of F-1 Petunias because the individual items stand out and don't form a harmonious blend.

Colorama is a blend grown to give a complete color range, without clashing contrasts, with all the good qualities of F-1 Hybrids.

Uniform in height, early flowering and vigorous in growth, Colorama produces 2½ to 3 inch flowers ranging from pure white to light and medium salmon, warm scarlet, scarlet-salmon, fiery red, light and medium pink and rose. Some have gold or topaz throats, yet harmonize perfectly with the clear colors. Shades of blue, starred and various bicolor shades are also produced, yet do not seem out of place with other colors.

We consider this to be the outstanding Petunia mixture to date. Pkt., 50c.

5780 VINCA LITTLE PINKIE. Pkt., 25c.

Dwarf Rose Periwinkle

5780 VINCA LITTLE PINKIE. A new dwarf selection of Periwinkle in a rich rose color. Plants are dwarf and compact. Very free flowering. Holds up well under heat and sun; equally good in shade. Suggest seed be sown indoors and small plants set out after danger of frost. Seeds may be sown in February or March in living room temperature. As soon as the seedlings are large enough to handle they should be transplanted into plant bands or small pots and kept in the house until all danger of frost is over. This is a tender perennial from Madagascar, usually treated as a tender annual. It flowers all season until killed by frost. Pkt., 25c.

Best All-Double Pink

3949 COLOSSAL SHADES OF ROSE. 18 in. Largest All-double variety of American introduction. Silver Medal 1946. Plants of luxuriant growth bear 4½-inch flowers in abundance, varying in color from light pink to deep, purplish rose some being fringed and some plain-edged. Lovely in bowl arrangements. Pkt., \$1.00.

4669 SALVIA ST. JOHN'S FIRE. Pkt., 35c

Reddest of all Salvias

4669 SALVIA ST. JOHN'S FIRE. Our own reselected strain coming into flower early, while the plants are but a few inches tall, and remaining in bloom until frost. The bright scarlet spikes stand densely and rigidly upright above the foliage on the uniformly compact plants. Pkt., 35c.

Salvias are easily grown from seed started in a cold frame, electric-heated hot-bed, or an indoor seed box in a sunny window. Varieties of the species splendens, to which St. John's Fire belongs, are tender and should not be set out in the garden until danger of frost is over. An excellent way to grow the plants is in plant bands, in which seed are sown, or seedlings are transplanted from the seed box as soon as they have made true leaves. Seed germinate in 15-20 days. Start seed in the house four weeks before the safe date to move outdoors, six weeks before this date if grown in an electric hot-bed.

6035 ZINNIA CACTUS FLOWERED HYBRIDS. Pkt., 25c.

New Giant Cactus Flowered Zinnias

This new strain of zinnias, whose giant flowers, 5 inches or more across, have charmingly irregular petal formations and arrangement, becomes increasingly important with the selection of more single colors which come true from seed, and have a special soft but brilliant pigmentation.

The petals of these flowers resemble those of dahlias of the cactus and semi-cactus classes. Some petals are attractively quilled, others gracefully curled, and all are different from the rather stiff formality prevailing in zinnias of older strains.

Our Color Illustration includes the varieties listed below, which are easily recognized from the descriptions.

6039 ESKIMO. Opens creamy white, changing to pure white. Pkt., 25c.

5857 FLORADALE SCARLET. Intense scarlet red. Pkt., 25c.

6038 RIVERSIDE BEAUTY. Warm azalea-pink. Pkt., 25c.

6040 SUNNY BOY. Rich buttercup-yellow. Pkt., 25c.

6035 CACTUS FLOWERED MIXED (GIANT BURPEE HYBRIDS). A complete color range of the softer Zinnia colors, including lovely pastels found nowhere else. Pkt. 25c.

6180 ZINNIA PEPPERMINT STICK MIXED. Pkt., 25c.

Gay Candy Striped Zinnias

6180 ZINNIA PEPPERMINT STICK MIXED. An interesting new development in the popular striata or striped type, reselected for a wider color range, including red and white, red and yellow, pink and white, orange and white and purple and white. Plants are somewhat taller than the Pumila type, flowers are medium sized. Early to flower, they are produced in profusion until frost if kept picked. Pkt., 25c.

Brightest Red of All Zinnias

For Your Primrose Path

Of all the flowers that require shade in the summer months, and do not object to some dampness, primulas are most beautiful. They flower in the spring and early summer, and many prefer to sow their seeds in the fall. To grow primulas from seed is an accomplishment of which an amateur may be proud, though it requires patience and understanding of the plant's requirements rather than exceptional skill.

Seeds should be sown in the fall or early spring, in a flower pot or flat filled with porous potting soil. Barely cover the seeds and keep the soil moist and shaded from the sun. Germination time varies with different species but all take 15 to 30 days, and some when sown in the fall may lie dormant until spring. Transplant them to their permanent positions when danger of frost is over. A shaded location, in soil rich in organic matter should be chosen, and special attention should be given to give the plants sufficient moisture.

GIANT Delphiniums

Culture: B, D or E, Page 57

Because of superiority to other strains, in many important points, Pacific Hybrid delphiniums have become by far the most popular in this country. We offer its named varieties with the assurance that they come so true from seed, you may count upon plants with little if any variation from the variety description. Plants are 60 to 65", mildew resistant. The stems are straight, strong and whippy, not easily broken by wind. Flowers are enormous, and set close together forming lovely plumes of color. Hybrid delphiniums dominate the garden in late June. In deep, rich soil they grow six feet or more tall, with long spikes of vivid color, or clear white. Besides the Pacific Giant hybrids we offer others which in our opinion are the best available in the world. Seeds germinate in 20 days

Selections that Belong in Every Garden

In the following color pages, we have concentrated the best of America's most popular annuals. These are flowers that belong in every garden. Easy to grow, lovely to look at, annuals produce their flowers in one short season from seed.

These have been selected from our listings of flower seed, the largest list in the world today.

To the advanced gardener, and to the beginner with a venturesome mind, we also recommend the following section (see page 43) which lists less well-known items. Although many of these may be more difficult for the beginner to grow, they include some of the world's loveliest annuals.

Because of dual listings, we suggest that in looking for an annual of which the name is known, you consult the index.

Wilt Resistant Asters

Culture A, B, D or E, Page 57

If planted in the garden among other plants, Asters do not seem as susceptible to disease as when planted in solid blocks. Wilt Resistant varieties are resistant to most of the Wilts that cause the seedlings to sag suddenly and die before they can bloom.

Aster Yellows are somewhat more difficult to control. Spraying with Lindane or D.D.T. to control leaf hoppers helps somewhat. Best preventative is to grow Asters inside a screen or cloth house such as is used for Dahlias. Plants in the open garden are subject to constant attack, so persistent, regular spraying is needed to kill the leaf hoppers that carry the disease. Aster seeds germinate in 8-10 days.

358 SNAPDRAGON MASTER BLEND. Pkt., 35c

Newest Garden Snapdragons

Culture: A, B, D or E, Page 57

Tetra Snapdragons

These unique flowers were created by science with an amazing treatment which changed the cell structure of the plants. "Tetra-snaps" are probably the most conspicuous success this method has so far attained.

Every merit which snapdragons have as a garden flower is magnified. They have greater vigor, a longer flowering season, darker green, glossier foliage, stronger stems, and their flowers have more and larger florets, with ruffled petals and brighter colors.

358 MASTER BLEND. A new strain of Snapdragon bred to overcome the disappointment of late flowering in the "Tetra" varieties, yet with the same large bloom and fine plant habit. Very free flowering, they come in quite early, before heat of Summer can injure the flower spike. A good range of color, unexcelled for the garden border or cutting. Pkt., 35c.

434 APPLEBLOSSOM. Glistening pink with white tube.

433 CANDLELIGHT. Clear bright yellow.

438 CRIMSON. A deep yet bright velvety crimson.

429 ORCHID. Rich orchid-purple with yellow blotch.

428 YELLOW. A rich clear color.
Each of the above, pkt., 25c.

Vigorous Crimson Giant

431 VELVET GIANT. 2½ ft. tall, each plant produces 6 to 12 spikes. Rich, velvety, deep crimson blooms show an undertone of orange-bronze. A top-notch variety for cutting and garden. Pkt., 25c.

MINIATURE SNAP-DRAGONS

A delightful strain forming compact tufts 4 to 6 inches high, covered with miniature flowers. Excellent for rockeries, small beds and edgings.

432 MAGIC CARPET.

Very compact with a good range of colors including pinks, terra cotta shaded apricot and a few purplish shades, with light shades predominating. Pkt., 25c

431 SNAPDRAGON VELVET GIANT. Pkt., 25c.

Rust-Resistant

If you have found Snapdragons difficult to grow, rust is probably responsible. Rust is a widespread disease which discolors the leaves and saps the vitality. Growing the Rust-resistant strain, difficulties disappear. Seeds germinate better, plants are more vigorous, the foliage clean, flowers large and of fine color and the flowering season prolonged. Seeds germinate in 20 days

This will produce a glorious variety of flowers for cutting. We suggest planting in rows in the vegetable garden where the plants may be cultivated. For a continued succession of bloom, make two sowings, the first in early spring just as soon as the soil can be worked and a second when late tulips are in flower and peony buds showing color. 1 oz., 50c; ½ oz., 30c; pkt., 15c.

5730 VERBENA Vaughan's Best Mixture.

Includes all the Hybrida and Gigantea sorts and other sorts not listed and we feel perfectly safe in stating this mixture of Verbenas will eclipse every other strain offered by any other house, and it will produce flowers that will delight all beholders through the summer. ½ oz., 65c; pkt., 15c.

Mixtures of Annuals containing many different species, such as our Surprise Garden Mixture and Annuals for Cutflower Mixture, should be sown in two lots. Some species grow best under cool conditions, while others do best in warmer soil.

We recommend sowing the first lot as soon as the ground can be worked in Spring. The second should be sown when late Tulips are in flower, or when peony buds are showing color. This double sowing will give a much wider range of Annuals from a single packet.

Flower Seed Cultures—How to Sow

IN FIVE paragraphs below, designated A,B,C,D, and E we cover in considerable detail the methods of starting flower seeds which are available to the amateur without a greenhouse, and which cover well the needs of an outdoor garden. In the flower seed section in the case of each flower listed, information is given as to the cultural methods which can be used for that subject.

A Sow in the bed, border or row where the plants are to grow. The soil should be loamy, with well pulverized surface. With heavy soil inclined to cake and crack, it is usually best to grow plants in a seed bed (B) and transplant to the permanent place. Loosen the soil where seeds are to be sown, with the trowel, or hoe, several inches deep. Rake smooth. Broadcast small seeds and cover them lightly four or five times their diameter. Very small seeds may be merely pressed in. Larger seeds may be planted singly, well covered, but more thickly than plants are wanted. Firm the soil well over the seed. Watering now becomes of great importance. At no time should the soil be allowed to become hard and dry, yet excessive watering may cause the seeds to rot, sour the soil, or cause "damping off." When the plants appear, thin them out, allowing each to grow singly, without crowding. The distance between them is governed by their ultimate size and spread. Excess plants may usually be moved to a new location.

B Sow in outdoor seed bed, to be transplanted. The seed bed in the open should be of loose, mellow loam, raised slightly above the surrounding surface, and preferably surrounded by a wooden curb, to prevent rain washing across it. It should not be wider than four feet, so it can be worked easily. Shelter from high winds is valuable, but damp and shady corners are not desirable. Full sun is advisable when seedlings are up, while shade when needed, as in mid-summer for perennial seedlings, is best supplied by a lath or cloth canopy, which can be removed in damp and cloudy weather. Sow the seeds in rows which may be as close as five inches. Sowing and watering are the same as described in "A" above. Seedlings may be transplanted when they make true leaves, the second pair of leaves to appear; or they may be left until larger before being moved to their permanent location. Perennials should be moved from the seed bed to a nursery row, to grow until fall before being moved to the border.

C Sow in flat, pot or pon outdoors or in a cold frame. This method is applicable to slow germinating subjects, some of which may take a year to germinate. Fill the receptacle with potting soil as described in "D", firm the soil and broadcast the seed, covering four or five times their diameter. Place the receptacle in a shaded location, where there is free air circulation. During the spring, summer and fall, water often enough to prevent soil from drying out. A mulch

of peat moss will help retain moisture. In winter, place in a protected place outdoors and cover with leaves. Have patience with slow germinating subjects; do not disturb too quickly. Any live seed will eventually grow if given time enough, provided soil, moisture supply, etc., are right. When seedlings appear and make true leaves, transplant to pots, nursery row or permanent location. If moss forms on soil surface, sprinkle fresh earth over top.

D Sow indoors in a box, pot or pon. This method may be followed where there is a window facing south, enjoying sunlight most of the day. Use a standard florists' pot or pan (shallow pot) or a "flat," which is a shallow box, with holes bored in the bottom for drainage. Cover the drainage holes in pot or box with broken pottery; fill with potting soil. This is a mixture of half sand and half black loam. It may be obtained from florists. Firm the soil, and sow the seeds in rows, marking each row to identify the sowing. Water by setting the box or pot in water, so that it soaks up from below, or use a fine spray which does not wash the soil. Place in a dark place, covered with a wet newspaper blanket until the seeds sprout. As soon as sprouts appear bring into full light. Cover the box or pot with glass to check evaporation, but when moisture collects on glass wipe it off, and prop up one end of the glass to allow air to circulate during the sunny part of the day. A temperature not below 50 degrees at night, or 75 degrees by day, is best. Do not allow the soil to dry out. When the seedlings have made true leaves (the second set), they should be transplanted to other flats, giving at least two inches of space apart; or they may be moved to small pots or to an outdoor seed bed or border.

E Sow in a hotbed or cold frame. A cold frame or a hotbed heated by manure or other means may be used. The best method with flower seeds is to sow seeds in flats, which are placed in the frame. With manure heated beds, seeds should not be sown until the temperature of the newly made bed has dropped to 90 degrees. Watering and ventilation are important. On sunny spring days, always prop up one end of the sash to prevent overheating which may occur quickly and cause spindly growth. Do not allow the soil to dry out. When the seedlings have made true leaves, they should be transplanted to other flats, spaced two inches apart each way; or to the soil in the hotbed, or to an outdoor location, if late enough.

New Beans Surpass Old in Yield and Quality

QUALITY in beans is measured by stringlessness, by tenderness, or the absence of fiber or "linen" in the pod; by ability to produce well under favorable or adverse conditions and by the length and shape of pod. Round-pod beans are considered of superior quality, due to superior stringlessness and less fiber. Flat pod varieties rate high in yield and flavor.

One week before frost proof date, sow bush beans two inches deep, 2-4 inches apart, pole beans, 4-6 inches apart. Harvest pods before seeds form. If picked clean, plants will bear until frost; but young plants yield best and succession plantings are advised.

Table Quality Beets

B-77 BEET PERFECTED DETROIT. Pkt., 15c; ½ oz., 25c

QUALITY in beets is measured by an even, globular shape, uniformity in size, bright, even color, flavor, fine texture and tenderness. Here, as with all vegetables, the difference between a fine and a mediocre strain of one variety may be as great as between different varieties.

Our best seed is grown only from transplanted roots, which are taken up in the fall, carefully graded, and transplanted again to produce seed. Only beets which conform to the highest quality standards are planted for seed.

All beets keep well in winter when properly stored. A special sowing should be made in midsummer to produce the storage crop.

As soon as soil can be worked in the spring, sow one seed to the inch, in drill half inch deep. Firm soil well over seed and water well if required. Thin when roots begin to make globes, to stand 4 inches apart in row. Cook discards with their tops.

Quantity needed to sow 15 ft. row, 1 pkt.; 60 ft. row, 1 oz.; acre, 7 lbs. (Rows 18 in. apart).

B-78 FIRE BALL. 55 Days. [✓] A dark blood red beet that is almost completely free of zonation. A very nice sort for an early planting. The roots are a smooth globe shape like Detroit but do not grow as large. Pkt., 25c; ½ oz., 35c; oz., 55c; ¼ lb., \$1.25

B-77 PERFECTED DETROIT. 55 Days. [✓] In this improved strain of Detroit Dark Red the fine qualities which have made that variety standard for main crop sowing have been strengthened by careful breeding. It is earlier and almost spherical in shape. The tops are taller than Regular Detroit and the leaves are green tinged with red. Pkt., 15c; ½ oz., 25c; oz., 40c; ¼ lb., 95c

B-76 DETROIT DARK RED. 55 Days. A strikingly uniform strain producing a very smooth globe shaped root of a very dark red inside and out. Yellows Resistant and Standard Cabbage

WHEREVER the temperature of the soil rises to 85 degrees and remains for several days, there is danger of the yellows disease, and when it strikes, a crop failure may result.

In the great cabbage growing district centering around Racine and Kenosha, Wisconsin, an industry has been saved by developing strains of cabbage resistant to yellows. We offer seed of these strains, which have been developed by years of scientific work, and actual growing tests. The uniformity and yield of resistant strains have greatly improved. We recommend their use wherever danger of yellows may exist. If the disease strikes, resistant strains will show slight loss, where non-resistant types would probably be destroyed.

Cabbage Culture: After frost proof date, set out plants for early crop. Late varieties may be sown outdoors in June. Space small early types 12 inches apart, medium 18 inches, large late 2 feet. Water well and protect from worms and aphids.

Newest Sweet Corn Hybrids

HYBRID sweet corn excels in three ways: Heavier yield, more even maturity, and resistance to Stewart's disease, and other troubles. Any open pollinated corn will mature unevenly and give edible ears from one planting over a longer period, which some may prefer. Our list has been revised to offer the best of both hybrid and open pollinated types, as proved in our trials.

A pocket plants 40 hills; a pound, 400 hills; 12 lbs., an acre.

Sow two weeks before frost proof date, seeds two inches deep, three inches apart; to be thinned out to six inches; or six seeds to a hill, 2 to 3 feet apart according to variety's height, thinning to three plants per hill. Time succession sowings, two weeks apart.

Slender, Tender Carrots

C-51 CARROT, TOUCHON. Pkt., 20c

CARROTS have been improved in quality at the same time their value as a health food has been gaining wider recognition. In addition to color, size, shape, tops and season of maturity, our special strains are selected for sweetness, and the tenderness and even texture of the flesh, especially for a minimum of "core." Scientists say the brighter the color, the more Vitamin A in carrots.

Sow as soon as soil can be prepared, in shallow drills, 5 seeds to the inch. Thin out when of finger size, and serve discards. Carrots will mature well growing close enough to touch, and remain delicious all season; but many prefer them young, and make several sowings.

Onion Sets

CAUSE of the long growing season required by all onions grown from seed, amateur gardeners use onion sets for producing both green onions, and mature ones. "Bottom sets," so-called to distinguish from top sets, produced by some varieties of onions instead of seed, are onion bulbs which are usually dwarfed by being sown thickly in rows, and stored over winter to be planted next spring for a speedier harvest than would produce. Succession plantings may be made as long as the sets remain in good condition. For growing mature onions in home gardens we recommend Golden Globe sets.

Large sets planted 2 in. deep for green onions, smaller 1 in. deep for mature onions; use the first one inch apart, the second 3 inches. Plant with the earliest crops. Green onions will be ready in three weeks, mature onions in three months from the planting date. The use of sets thus shortens by many weeks the time it would take to grow green or mature onions from seed.

Onion sets prices postpaid.

P-30 PARSLEY, Champion Moss Curled. Pkt., 15c

Parsley

PARSLEY should be sown early because it is very slow to germinate; and it is best to use radish seed mixed with the parsley seed to mark the rows. Parsley is one of the richest of green vegetables in vitamin A, and iron.

The rooted parsley provides excellent flavoring for soups and stews. Quantity needed to sow 50 ft., 1 pkt., 200 ft., 1 oz.

P-11 LITTLE MARVEL PEA. Pkt., 15c

Plant Peas Early

Tall Peas

THE gardener who takes pride in his peas and whose space is unlimited will find the tall-growing sorts unequalled for length of season, heavy yielding and high quality. Support should be given and they should be planted with plenty of room. Liberal fertilizing will be well repaid.

P-9 IMPROVED TELEPHONE. 74 Days. Of the tall-growing varieties of late peas, "Vaughan's Improved Telephone" is regarded by experienced and successful growers as the best sort for general purposes. Uniformly large pods, 5 inches or more long, filled with 8 to 9 delicious peas. Grows 4 feet high; is a main crop variety, and a heavy yielder. Pkt., 15c; $\frac{1}{2}$ lb., 40c; lb., 65c; 2 lbs., \$1.20; 5 lbs., \$3.00.

MEDIUM HEIGHT

A HEAVIER yield without sacrificing quality is obtained from the varieties of peas which require some support. The varieties listed below grow to three feet high and should be given support of chicken wire or brush between companion rows. The smooth podded sorts may be sown first, and if not allowed to mature too much, will be found to be of good table quality.

P-15 WORLD'S RECORD OR IMPROVED GRADUS. 57 Days. Gradus is the greatest of the wrinkled peas; it is large early, and in flavor equal to the best wrinkled kinds. It is tender and should be planted in the warmest spot in the garden. Vines 30 inches, pods 4 inches long, beautiful green color, with 7 to 8 or more rich, tender peas in each. Pkt., 15c; $\frac{1}{2}$ lb., 40c; lb., 65c; 2 lbs., \$1.20; 5 lbs., \$3.00.

P-14 THOMAS LAXTON. About 62 Days. The best pea for freezing. This is a selection of Gradus. The season is identical, but the pods are square at the end and deeper green. Vines are 3 to 3 $\frac{1}{2}$ feet high. A better yielder than Gradus. Pkt., 15c; $\frac{1}{2}$ lb., 40c; lb., 65c; 2 lbs., \$1.20; 5 lbs., \$3.00.

EDIBLE POD PEAS

Cooked Like String Beans

P-4 DWARF GRAY SUGAR. About 65 Days. The pods, not the seed of this variety are eaten. They are borne on vines 16 inches tall, and should be picked before seeds form. At this stage they are: stringless, brittle and succulent. Pkt., 15c; $\frac{1}{2}$ lb., 40c; lb., 65c; 2 lbs., \$1.20; 5 lbs., \$3.00.

S-437 NITRAGIN

Inoculate Your Beans and Peas

The roots of legumes, which include peas and beans, are the hosts of bacteria which secrete nitrogen from the air. This process is speeded up by applying Nitragin, the original legume inoculation culture. S-437 Garden Size for peas, sweet peas, garden and lima beans. Pkt. 25c, postpaid 30c. Each packet treats 5 lbs. of seed.

PEAS are rich in sugar, which begins to turn to starch when they are picked; thus home gardeners alone can enjoy this crop at its best.

Where hot dry summer weather cuts short the crop, the problem is to get the heavy yield, large size and sugar content of the late sorts into early yielding varieties which will bear a crop before the summer's drought arrives. Our strains are selected for these qualities. Quantity needed for 100 ft., 1 lb.

Sow smooth seeded with earliest crops, wrinkled peas two weeks before frost proof date. Sow 2 inches deep, two inches apart in row, or in twin rows, 6 inches apart, with support between. Crop must mature before hot weather.

Very productive, hardy, luscious and sugary. Vine 18 inches, pod dark green, well filled. Pkt., 15c; $\frac{1}{2}$ lb., 40c; lb., 65c; 2 lbs., \$1.20; 5 lbs., \$3.00.

P-7 GIANT STRIDE. 74 Days. Pea blight is a wilt affecting peas when they are planted too often in the same ground. You will find Giant Stride nearly 100% resistant, as well as of top quality and a heavy yielder. Pkt., 15c; $\frac{1}{2}$ lb., 40c; lb., 65c; 2 lbs., \$1.20; 5 lbs., \$3.00.

Vines about 16 inches high, pods about 3 inches long, each containing 5 to 7 peas of good size, tender and delicious. Pkt., 15c; $\frac{1}{2}$ lb., 40c; lb., 65c; 2 lbs., \$1.20; 5 lbs., \$3.00.

P-13 PREMIUM GEM. 60 Days. An extra early old type garden pea that could well be replaced by Nott's Excelsior or Little Marvel, as they are superior. Pkt., 15c; $\frac{1}{2}$ lb., 40c; lb., 65c; 2 lbs., \$1.20; 5 lbs., \$3.00.

P-10 LAXTON'S PROGRESS. 62 Days. The earliest and by far the best of the large-podded, large fruited wrinkled peas. P-8 HUNDREDFOLD. About 62 days. This is another of Vaughan's Specials that has proved itself a winner for gardeners. It is extra early, has large pods like "Telephone," which are filled with the finest flavored peas. Hundredfold is in season a few days later than the first earlies. It excels in size, appearance and productiveness. Pkt., 15c; $\frac{1}{2}$ lb., 40c; lb., 65c; 2 lbs., \$1.20; 5 lbs., \$3.00.

P-5 DWARF TELEPHONE OR DAISY. About 76 Days. A midseason maturing sort of merit; vines are dwarf and bear large, bright green pods, each containing 8 to 10 peas of finest quality. This is a splendid variety, of which we offer a high-class reselected stock. Pkt., 15c; $\frac{1}{2}$ lb., 40c; lb., 65c; 2 lbs., \$1.20; 5 lbs., \$3.00.

Radishes for All Seasons

RADISHES from April to December are possible for the home gardener who sows early, midseason, summer and winter types. Radishes supply, in a 2 oz. portion, 61U of Vitamin B-1; 11 milligrams of Vitamin C, 0.01 milligram of Vitamin B2.

Our strains are grown with the greatest care, which involves considerably increased cost, but the additional cost is small compared with the great difference in your crop.

Quick growth is the secret of success. A rich, light soil is required. The globe and olive varieties grow faster than the long type, and turn pithy sooner. The long types grow more slowly and are slower to turn pithy, so they endure heat better. Winter radishes should be sown in June or later and allowed to develop in the cool moist fall weather. Quantity needed for 15 to 20 ft., 1 pkt.; 75 ft., 1 oz.

Sow with earliest crops, $\frac{1}{2}$ inch drill, 5 seeds to the inch. Sow early types one week's supply at a time, at weekly intervals. Mix with parsnips, parsley and carrots, to make the row. Harvest when large enough to eat. Summer and winter types have longer harvest.

Spinach

SPINACH demands cool, moist weather. Seed should be sown at the earliest possible moment in spring in rows one foot apart and thinned to six inches in the row. It matures in 45 to 50 days and quickly runs to seed in warm weather. The Antvorskov variety listed below, is most free from this tendency.

Home gardeners have generally adopted Swiss Chard and New Zealand Spinach as a greens crop, as both may be cut many times and will produce a continuous crop all summer and until freezing weather in the fall. A fall crop of spinach may be sown in late July or August and will find the cool, moist autumn weather favorable for growth. New Zealand Spinach, however, is better sown in early spring as soon as the ground may be worked. The value of spinach in the diet has been scientifically established by the vitamin investigation.

Improved Squash

GROWING popularity of squash as both summer and winter vegetable is due to the improvement in flavor, and texture of the flesh, and to the new methods in cooking, which bring the squash to the table with its taste unimpaired. For summer, bush squash and vegetable marrows are best suited to the home garden, the latter being delicious at all stages, from infancy to maturity. The new winter varieties Buttercup and Butternut, have rapidly become rivals of the older types in popularity. Butternut has perhaps the best texture and flavor and is also resistant to stem borer. If there is room for only one squash in your garden plant Butternut.

Sow one inch deep, in light soil, sunny location. Space bush types 3 feet apart in row, vine types in hills six feet apart, 3 plants to hill. Use summer squash at any size, delicious in baby stage.

ACHIMENES

This is closely related to the gloxinia. Plant 6 to 7 bulbs in a 5-inch pot, or 9 to 10 in a 6-inch pot. The soil used for potting should be rich in humus and of an open, porous nature, allowing perfect drainage. A good mixture to use is equal parts of loam, leaf mold and sand. About one-third of the depth of the pots or pans should be occupied with drainage. After the young growth appears, great care should be taken to keep the soil moist, for a single severe drying will ruin the plant. Blooming time 8 to 10 weeks after planting. Mixed colors 3 for 60c; doz., \$2.00; 100, \$15.00.

ACIDANTHERA BICOLOR MURIELAE

Flowers resembling the gladiolus grow from similar bulbs or corms. The 2-inch florets are white with deep violet blotch, on 2 foot stems. Plant late in full sun 5 inches deep, 4-5 inches apart. Keep bulbs warm and dry. Bulbs, doz., 75 cents; 100, \$5.00.

Amaryllis Hallii. Produces in early spring attractive green foliage which grows until May, when it ripens off and disappears, and one not familiar with its habits would think the bulb had died, but about a month later, as if by magic, the flower stalks spring from the ground to a height of two or three feet, developing an umbel of large and beautiful lily-shaped flowers three to four inches across and from eight to twelve in number, of a delicate lilac-pink shaded with clear blue.

Culture—The bulb is perfectly hardy without any protection. The proper time to plant is in the summer when the bulb is dormant. Cover the crown about four inches. Each, 90c; doz., \$9.00.

This exclusive strain is famous for outstanding beauty, clear coloring, size of flowers. They may be kept for years, and will produce their beautiful flowers annually.

Good Growing Tips

As soon as received, soak the roots of Roses in a pail of water for 12 to 24 hours. Then, when pruned and planted, hill them up with 3 or 4 inches of moist soil. This keeps the wind from drying the plants and helps them to leaf out more quickly. Remove soil gradually as plants begin growing.

Dust or Spray Regularly with "VAUGHAN'S ROSE AND PLANT DUST" (see page 4) and you will have few, if any, rose troubles. Fertilize with "VAUGHAN'S GROGANIC ROSE FOOD" (see page 86).

TREE ROSES

"The Crowning Glary of any Garden"

Standard or Tree-shaped Roses are grown by budding the desired variety into a tall straight stalk at a height of 3 ft. The bushy head usually produces more flowers and larger ones than the bush type of the same variety. We offer the following: Chrysler Imperial, Circus, Helen Traubel or Peace. Each, \$7.50. (Shipped express charges collect.)

VAUGHAN'S SPECIAL PURPOSE MIXTURES

We recommend our lawn mixtures, composed of suitable varieties of grass seed, because results are more satisfactory from a correct combination of grasses than from a variety sown alone. Our grass seed division has long been known as an authority on growing fine turf, and for the guidance of our customers we send our booklet on lawn-making upon request and without charge. A copy of this booklet is enclosed in every carton and bag of Vaughan's lawn seed mixtures.

For Your Protection—Always remember that we neither buy nor sell seeds that are not tested in our own officially recognized laboratory for purity, germination, identity and freedom from weeds.

BENT LAWNS FROM CERTIFIED SEED

Bent grasses are increasingly popular for lawns, especially in cities where lawns are small in area and extra care is not burdensome.

Seed at the rate of 3 to 4 lbs. per 1,000 sq. ft.

ASTORIA BENT. Astoria Bent is identified by its numerous root-stocks which spread underground and throw up new shoots, making a very thick turf, and by the presence of runners above ground in the early stages of development. GLAMOROUS BEGONIAS

*Collection of Garden Types
Everyone Can Grow*

20 Imported Tubers \$2.00
4 each of 5 Colors **PRE-PAID**

THESE ARE THE COLORS:

Red, White, Pink, Orange, Yellow

All Tubers 1¼-1½ Inches in Diameter, Each Color Separately Bagged and Labeled

Tuberous rooted begonias have become in the last few years one of the most widely grown flowers in this country, rivaling the gladiolus, where formerly they were grown by few home gardeners east of California.

They combine great beauty with ease of culture, when their basic needs are understood and supplied. They reward the gardener not with a single flower, as do most summer bulbs, but with a succession of blossoms all season long.

Their liking for shade has helped make them popular, since a majority of home gardeners have shady spots for which it is often difficult to find attractive plants. Begonias thrive on the north side of buildings where they get a few hours summer sunshine morning or late afternoon; or in places where trees or shrubs shade them from the midday sun.

They are among the easiest for an amateur to start growing under protection in the early spring, to be moved outdoors to a place prepared, when all danger of frost is over. Cultural instructions are enclosed with the bulbs.

Typical reports from amateurs who have grown these flowers for the first time follow:

Buchanan, Mich. March 23.

Please send me 20 begonia bulbs as offered. Last year I ordered them from you and had most beautiful flowers. Everyone here who saw them thought them unusual.

Mrs. E.S.

Long Beach, Cal. March 10.

Please send me 40 imported begonia tubers. I bought these last year—neglected to plant them early and finally hurriedly stuck them here and there in my patio potted plants. And such beauty you have never seen! Everybody thought they were magnificent.

Mrs. V.N.L.

New Types of Begonias

Picotee. These lovely flowers have the camellia form, with each petal edged with a different color, in the manner of the picotee carnations. The effect is delightful in flower arrangements. Colors for your selection include white with red edge; white with pink edge, salmon with scarlet edge.

Pendula (Illustrated above). These bear double flowers on long stems which drape over the sides of a hanging basket, or planter box, producing a novel and attractive decorative effect. Excellent for a window-box on the shady side of the house. Colors for your selection include scarlet, yellow, white, orange, salmon pink.

Rosebud. Flowers of this class have the form of a rose bud in pastel coloring. Separate colors cannot be supplied, but all pastel colors in the mixture are harmonious and pleasing in combinations.

All the above prepaid at prices below.

1¼-1½ inch bulbs, 12 for \$2.00; 25 for \$4.00; 100 for \$14.00.

SPECIAL OFFER 8 Mixed for \$1.00.

Lovely Pink Lily

LILIAM SPECIOSUM RUBRUM

8-9 INCH, 3 FOR \$1.00

This is most beautiful of pink lilies and is also the easiest to grow. It is seldom attacked by disease, and perfectly hardy, living for years in the coldest sections of the country when planted in a well drained place.

It grows slowly, with sturdy stems reaching a height of 4 feet, and blooms in late August and early September, producing branches of flowers many of which reach 6 inches in diameter. Usually 8 to 12 flowers per plant blooming over a 3 week period.

The frilly petals are white, but so flushed with deep pink that only the margins are clear white; and numerous dots of carmine decorate the petals. These are reflexed, or turned back, while long stamens and pistil project with decorative effect. Use in back ground or among evergreens. Flowers are often used for corsages, and bouquets by Florists.

Planting instructions are sent with the bulbs.
