1. Except where noted, the Latin terminology and the sequence down to Family follows Wetmore (Smithsonian Misc. Coll., 1940, Vol. 99, No. 7) and where possible, the nomenclature and sequence from Subfamily to Species conforms with the 1931 edition of the American Ornithologists' Union Check-list and the supplements subsequently published in the Auk.
2. All species credited to the province in ornithological literature are included in this classification provided each was based on one or more collected specimens the history of which is adjudged authentic and beyond doubt.
3. The New World toothed birds are regarded as a Superorder (Odontognathae) but the Struthious birds and their allies (Palaeognathae) and Penguins (Impennes) are merged with all other toothless birds in Neognathae (see McDowell, Auk, 1948, 65: 520-549).
4. Species or whole groups which are relatively unimportant elements in our present-day avifauna, i.e., those that are extinct, extirpated or unexpected on geographic grounds, are bracketed.
