FLUSHING, N. Y.

Bulbous and Tuberous Flowers.

THIS class of Flowering Plants, so remarkable for its combinations of varied beauties, has always commanded the admiration of Flora's Votaries. The Splendid Collection which we now present is the result of a long course of years devoted assiduously to its accumulation, and far surpasses any other in our Country. Every species and variety of Bulbous and Tuberous Flowers enumerated in any Catalogue in the Union, can be supplied by us, and always at as low, and in most cases at lower rates, than obtainable elsewhere.

Orders for Bulbous Roots should be forwarded from August to November, both inclusive. In open winters, and at the South, they may be planted at any period when the ground is workable, previous to February. When the prices named are for *Assortments*, the selection of the varieties is to be made by us, but if applicants will name such as they already possess, those varieties will be omitted in our selections. It may be deemed superfluous on our part to caution Amateurs against the refuse and worthless Bulbous Roots which foreigners send annually to our Auctions, and which ignorant purchasers often re-vend throughout the interior, sometimes professing to have obtained them from credible sources. Those who desire the choicest varieties, and a selection of superior and perfect Roots, should be especially careful as to the source whence they obtain them.

Persons who purchase to re-vend will be dealt with on the most reasonable terms.

Directions for the Culture of Bulbous Flower Roots, &c.

The most simple course of culture, is all that is required for this class of flowers.

The situation should be dry and airy; the soil a light sandy loam, and if not sufficiently light, add a portion of sand to make it so, and enrich it by digging in a liberal quantity of old decomposed manure.

The best periods for planting the hardy species of Bulbs, are August to November inclusive, but it may be performed later in climates where

the ground remains open. In planting, it is beneficial to strew fresh or sea sand in the trenches or openings, before and after placing the roots, so that they may be completely surrounded by sand.

Hyacinths, Persian Fritillary, Martagon, and other Lilies, should be planted at a depth of four inches; Crown Imperials and Polyanthus Narcissus, five inches; Tulips, Double and Single Narcissus, Jonquils, Arum, Colchicum, Snowflake, Bulbous Iris, Pæonies, and Gladiolus, three inches; Crocus, Small Fritillaries, Snowdrops, Ornithogalums, and Dens Canis, two inches; Anemone and Ranunculus, one and a half inch; always measuring from the top of the bulb. The roots can be placed from two to six inches apart, according to their size. When planted, it will not be necessary to remove them oftener than every second or third year, and then it is only rendered necessary by their increase, and for the purpose of separating them, and of enriching the soil.

Bulbs for Winter blooming, in pots or glasses.

Hyacinths, Polyanthus Narcissus, Roman and other Double Narcissus, Jonquils, Persian Iris, Persian Cyclamen, Crocus, and Single and Double Van Thol and other Early Tulips, are the preferable species for this purpose. Those intended for glasses, should be placed in them the middle of November, the glasses being previously so filled with pure water, that the bottom of the bulb will just touch the water; then place them for the first ten days in a dark room to promote the shooting of the roots: after which, expose them to the sun and light, in an airy position, as much as possible. Rain water is preferable, and it should be changed as often as it becomes impure, at which periods the roots should be drawn entirely out, and be rinsed in clean water.

Bulbs intended for pots, should be planted therein during the months of October or November, and be left exposed to the open air until the ground commences freezing, when they should be removed to the Greenhouse or to a warm room. They will, of course, require occasional waterings, and plentifully, as the growth advances.

Bulbous Roots of American growth.

Our Collection is the only extensive one grown on American soil, others depending almost solely on purchases or on importations. Bulbs grown here possess a great advantage over the imported ones. They form roots much sooner and more freely in glasses or pots, and consequently bloom earlier and more perfectly. In the open ground they possess greater vigor and increase more rapidly.

Chinese Tree and Herbaceous Pæonies.

Of this family of Shrubs and Plants, we may unhesitatingly pronounce our collection superior to any other in existence, as it combines the *Elite* of every celebrated collection in Europe, with the addition of the splendid seminal varieties which have been produced by ourselves, and which are sought after with avidity by the Amateurs of Europe. The ease with which they may be cultivated in any ordinary soil, and in the coldest latitudes, renders them the most desirable acquisitions, and there is certainly no Class of Flowers which affords a more brilliant and interesting display.

Hyacinths.

All classes are equally hardy. In making selections of the varieties suited to particular purposes, all of the single-flowering varieties, and those noted thus * among the double varieties, are the best adapted for flowering in glasses; but all the kinds are equally well adapted for cultivating in pots or in the open garden.

DOUBLE HYACINTHS.

Double Red and Crimson.

SPLENDID CHINESE HERBACEOUS DOUBLE PÆONIES.

These are varieties of *Pæonia Sinensis*, with the exception of No. 66 and 97. They are mostly very fragrant, and form the most brilliant appendage of the garden at their season of flowering, which is in June and July. They are of the most easy culture, prefer a northern exposure, and will support the severest Canadian winters, the most of the species being natives of Siberia and Chinese Tartary, and none of them from warm latitudes. We supply blooming roots, and not mere slips, such as are frequently sold, and the prices are much below the usual rates, our stock being by far the largest in the Union.

1	<i>Alba patens</i>	Beautiful white, yellow center.....	\$1 00

Our Selection.—12 Fine Double varieties for \$4. 12 Fine varieties, more rare, for \$5. 25 Very fine varieties for \$8. 12 Ordinary Varieties, \$3.

CHINESE TREE PÆONIES.—PÆONIA MOUTAN.

These are the most splendid and showy of all Flowering Shrubs, and among the most rare.

All are double, unless denoted otherwise. They are perfectly hardy, and will withstand the winters of our most northern States. They bloom in May, 10 to 15 days before the Chinese Herbaceous varieties.

Extra large plants of five and six years' growth, of Nos. 1 and 2, can be supplied at \$3 each; and also of many other varieties, at \$5 and upwards.

There is no other extensive Collection of this Class of Plants in the Union; and those we supply are far larger than are usually sold.

PRICE.

1	BANKSII, double rosy, very large, magnificent, protuberant, fragrant.....	75 to 1 00

Nepaulese Chief.....	Crimson and gold, unique.
Nil Desperandum.....	Vivid scarlet, fine.
Niobe.....	White, tipped lavender.
Oiclet Parfait.....	Orange red striped, beautiful.
Pre-eminent.....	Plum color.
Primrose Invincible.....	Primrose yellow, superb.
Primrose Perfection.....	Primrose yellow, superb.
Prince Albert.....	White, edged lavender.
Princess Charlotte.....	Violet purple, tipped white.
Princess Louise.....	Shaded, salmon buff.
Queen of Whites.....	Fine white.
Queen of Primroses.....	Primrose yellow, superb.
Queen Victoria.....	Yellow, margined red.
Rainbow.....	Rosy scarlet, white stripes.
Red Gauntlet.....	Clear red, fine form.
Reine des Belges.....	Rich dark striped.
Richard Cobden.....	Shaded crimson, superb.
Ringleader.....	Ruby crimson.
Satirist.....	Shaded crimson.
Scarlet King.....	Rich vermilion.
Seraph.....	Orange buff.
Sir Charles Napier.....	Dark scarlet, splendid.
Sir John Franklin.....	Buff, shaded salmon.
Sir Robert Peel.....	Scarlet crimson, fine.
Sir R. Whittington.....	Ruby crimson.
Snowball.....	Pure white, beautiful.
Spectabilis.....	Orange and red.
Star of the West.....	Creamy white, striped cherry.
Striata Perfecta.....	Striped purple and lilac, fine.
Sulphurea excelsa.....	Beautiful sulphur.
Summit of Perfection.....	Plum color, beehive form.
Unanimity.....	Scarlet and deep yellow striped.
Walter Wilson.....	Superb orange.
White Standard.....	Penciled white.
Wonderful.....	Pink and cream.
Yellow Superb.....	Light yellow, exquisite form.

NOTE.—Dahlias by the hundred and thousand, at very low rates.

Directions for the Culture of Bulbous Roots, &c.

The most simple species of culture, is all that is required for this class of flowers.

The situation should be dry and airy; the soil a light sandy, and if not sufficiently light, add a portion of sand, to make it and enrich it by digging in a liberal quantity of old decomposed manure.

The best periods for planting the hardy species of Bulbs, are August to November inclusive, but it may be performed later, in climates where the ground remains open. In planting, it is beneficial to strew fresh or sea sand in the trenches or openings, before and after placing the roots, so that they may be completely surrounded by sand.

Hyacinths, Persian Fritillary, Martagon, and other Lilies, should be planted at a depth of four inches; Crown Imperials and Polyanthus Narcissus, five inches; Tulips, Double and Single Narcissus, Jonquils, Arum. Colchicum, Snowflake. Bulbous Iris, Pæonies and Gladiolus, three inches; Crocus, Small Fritillaries, Snowdrops, Ornithogalums and Dens Canis, two inches; Anemone and Ranunculus, one and a half inches, always measuring from the top of the bulb. The roots can be placed from two to six inches apart, according to their size. When planted it will not be necessary to remove them oftener than every second or third year, and then it is only rendered necessary by their increase, and the necessity of separating them, and of enriching the soil.

Bulbs for Winter blooming, in pots and glasses.

Hyacinths, Polyanthus Narcissus, Roman and other Double Narcissus, Jonquils, Persian Iris, Persian Cyclamen, Crocus, and Double Van Thol Tulips, are the preferable species for this purpose. Those intended for glasses, should be placed in them the middle of November, the glasses being previously so filled with pure water, that the bottom of the bulb will just touch the water: then place them for the first ten days in a dark room to promote the shooting of the roots, after which, expose them to the sun and light, in an airy position, as much as possible. Rain water is preferable, and it should be changed as often as it becomes impure, at which periods the roots should be drawn entirely out, and be rinsed in clean water.

Bulbs intended for pots, should be planted therein during the months of October or November, and be left exposed to the open air until the ground commences freezing, when they should be removed to the greenhouse, or to a warm room. They will, of course, require occasional waterings, and plentifully, as the growth advances.
