DAYLILIES

Daylilies are on the march in popularity. If you have some, you will enjoy adding other varieties. If you have never grown them, try some and come to know their beauty and fine performance.

Varieties and Season of Blooming

To get the greatest enjoyment out of daylilies one should choose varieties to range from light shades of cream and yellow through deep yellow and orange to the rich tawny and red tones. To aid you in obtaining the best, we endeavor to offer only those that have good growing and blooming characters in addition to high flower quality. The time of blooming varies somewhat from year to year, but one can roughly classify the varieties into four groups: viz, early, early mid-season, mid-season, and late... In the vicinity of Washington, D. C., varieties marked "e" (early) bloom within the period of May 2-31; those marked "em" (early mid-season) June 1-30; those marked "m". (mid-season) July 1-20; and those marked "l" (late) July 20 until frost. The figures following the name indicate respectively height of plant in feet and size of flower in inches.

Instructions For Ordering and Planting

We take pride in supplying strong plants of superior varieties at a reasonable price. We do not sell un-named seedlings. Our stock is guaranteed true to name. If a mistake should occur adjustment will be promptly made. Postage will be paid on all orders of \$2.00 or more. Transplanting may be done in spring or in mid-summer after blooming is over. Late fall planting is not advised where the weather is cold enough for winter injury to be a problem. Daylilies grow best when planted in fertile soil.

New varieties

The introductions of Dr. H. P. Traub, a noted breeder of daylilies, are increasing in popularity every year. Such varieties as MAYOR STARZYNSKI and LIDICE are fine for their garden effect, while MILDRED ORPET, GEO. KELSO, CORLISS, AND VIVIAN TOOLE add color harmony in the garden with their lighter shades. His DR. STOUT variety combines shapeliness of flower and a pleasing orange color with a reddish tint. It should be in every collection. The very superior new red variety BERWYN has received many favorable comments while growing on our grounds. ADVENTURE, a fine new yellow, is also very popular on our grounds.

Traub Introductions

	<u>Each</u>
BERWYN, (Traub and Cooley) 1 3-4, bright carmine; yellow throat...	\$2.00
CARNIVAL m 3.5-5 Moro red; large orange throat.....	1.00
