Now is the Time to Plant with Confidence Dreer's Bulbs of Excellence★

Dreer's Guide to Autumn Gardening

It's much to your advantage to **order early** though you may not intend planting for a few weeks. You are then certain of receiving all the things you want this fall.

August

This is the month to plant the fall-flowering Colchicum, and Sternbergia. Early in August start Pansy seed and seed of other quick growing biennials.

Late August or early September is the best time to start a new lawn or reseed the old one.

September

It is still time to plant the bulbs of Colchicum, and Sternbergia. The earlier they are planted now the better they will be. If you did not sow your new lawn or repair the old one during late August do so now or as soon as possible. This is the most important month for planting bulbs in the garden to bloom next spring including Narcissus, Anemone, Brodiaea, Calochortus, Camassia, Erythronium, Leucojum, Erenurus, Muscarium, Ranunculus, Scilla, Spring Starflower (Triteleia), and Iris reticulata. Late in the month plant Dutch and Spanish Iris. Start Lilies indoors, also Calla, Baby Gladiolus, Freesia, Ixia, Leucocoryne, Ornithogalum, Sparaxis. Where winter sets in early sow the seed of hardy perennials marked in this catalog *.

October

All the bulbs recommended for September planting can still be started this month as long as the ground is not frozen. Cover with leaves, straw, corn stalks, or any other loose matter to keep the frost out until the bulbs or plants are available. *October is the most important month for planting Tulip bulbs.* Continue indoor planting of all bulbs that will bloom in the house during the winter and spring. By the middle of the month perennial plants, shrubs, and climbers are available and during the latter part dormant Roses should go in the ground. Just before the soil in the seed bed or cold frame freezes sow seed of the perennials marked with a * in this catalog. By the middle of the month begin your first planting of Paper White Narcissus, Soleil d'Or Narcissus, and Chinese Sacred Lily indoors. *This is the month to plant Lily bulbs.*

November

Continue planting Lilies throughout this month. There is still a chance to plant the many types of bulbs recommended for September and October planting, also perennial plants, shrubs, climbers, and Roses, as long as the ground is free from frost.

December

Throughout December start bulbs of Paper White Narcissus, Soleil d'Or Narcissus, Chinese Sacred Lily, Amaryllis, and all tender bulbs for blooming indoors in the house.

Glorious Bulbous IRIS

DUTCH, SPANISH, & ENGLISH

These Hardy Iris must be planted in the Fall

Iris will give your garden a maze of sparkling splendor—and is the garden really complete without these dainty touches of color?

These Iris differ from the Bearded and Japanese by producing bulbs instead of rhizomes. These must be planted in the fall, the earlier the better and they have proved quite hardy. Where winters are very severe they should be covered deeply with straw, hay, or leaves. Excepting the English Iris they form foliage in the fall with the leaves persisting throughout the winter. Cover the bulbs 4 to 6 inches deep.

Late Autumn is **SHRUB PLANTING TIME**

Give your home an atmosphere of cozy charm with a few well chosen shrubs. A few dollars spent for some of the rarer shrubs will add an air of serenity and restfulness that will give distinction to your home grounds. Late autumn is the ideal time to plant shrubs. They usually can be dug after the middle of October and where frost enters the ground previous to that time a few burlap bags, hay, straw, or manure will keep the soil workable until the plants arrive.

As growth varies according to conditions we give the approximate height as follows: D = Dwarf (less than 4 feet tall); M = Medium (4 to 8 feet tall); T = Tall (8 feet and more).

Our Shrubs are Too Heavy to be Sent by Mail

They are shipped by Express or Freight at purchasers' expense. No charge is made for packing or delivery to the Express, Freight, or Steamship lines in Philadelphia. The sizes given are those of the plants when shipped to you.

Plant American

The war has given Americans a chance to re-value their own potentialities. Those who can travel will be choosing to see this country. Those who garden will be learning a new appreciation of the vast quantities of plant material available here.

Many of the bulbs which hitherto came to us from Holland and France will not cross the water, nor is it possible to depend on English-grown bulbs for Autumn planting. Tulips especially will be either missing from the lists or be purchasable in only limited quantities. We cannot hope to substitute plants and bulbs that rival the tulip's beauty, in its various ranges from the earliest species to the latest noble Darwin, but we can turn to daffodils, to the varieties of western bulbs which are among our greatest floral blessings and of which an almost unlimited supply can be had.

American-grown roses will enjoy a wider acceptance and the whole host of perennials so superbly raised will compensate for any losses the war may entail.

It is also to be hoped that Americans will come into a deeper appreciation of the trees, shrubs and perennials that are part of our common heritage here. The American nurseryman has long since been aware of their beauty and has propagated them in great quantity and variety.

This Autumn the gardener's slogan should be—"Plant American!" Plant more gardens with what we have close at hand. Lend support to those who make the green growing and flowering beauty of this country so easily available.

Spiraea Bumalda, Anthony Waterer

The small picture of Tamarix Summer Glow shown to the left hardly can convey the beauty of this splendid new shrub. The delicate texture of both blooms and foliage is difficult to portray in print and the shrub must be seen to be appreciated. Where a free-branching bush is preferred to a taller plant we suggest pruning it back each spring to within 6 inches from the crown.

Perennial Flower Seeds

For Autumn Sowing

**All Flower Seeds
are Sent Postpaid**
to any Post Office in the United
States or its possessions

Early autumn is a favorite time with many gardeners to sow perennial flower seeds. To hasten them along a cold frame or a similar temporary structure should be used.
Those marked + give best results if the seed is sown late in the fall. They need the action of frost to sprout freely during the coming spring.

To help our customers in selecting varieties for the rock garden we have used the symbol Δ to identify them at a glance. These varieties also are splendid for dwarf beds, borders, or for edgings. Plants suited to semi-shade are marked $\odot$, and those that will grow in deeper shade $\bullet$. Practically all of these also do well in a sunny position.
