3075 **Collarette Marigold—Crown of Gold**

*Gold Medal Winner
1937 All America Selections*

Every flower enthusiast will want this remarkable new Marigold. It differs from other garden varieties in that the foliage is entirely odorless—a characteristic that will appeal to those who merely tolerated the pungent foliage odor of other varieties because of their beautiful flowers. The blooms of Crown of Gold have a distinct sweet fragrance. They resemble Chrysanthemums with their full center crown of gracefully incurved florets surrounded by broad drooping collar petals. The color is glistening pure golden orange. Blooms profusely and continuously from midsummer until frost and grows 2 ft. high. Pkt. 25c; special pkt. 75c.

Dreer's Selected List of Newer and Better Vegetables

In each class of vegetables we find some that are superior to others in one or another characteristic. It may be extra earliness, particularly attractive appearance, superior flavor, or an ideal combination of many desirable factors. Such vegetables logically become leaders and among such leaders the finest strains are most eagerly sought by the growers.

On this and the following pages we offer what we know to be prize strains of distinctly worth-while leaders among the most useful vegetables. They are not necessarily novelties but rather specialties which have won their way to the top through meritorious performances in gardens of Dreer customers everywhere.

23 Bean—Bountiful

A most remarkable Bush Bean with bright green pods measuring 6 inches long and $\frac{3}{4}$ -inch wide. They are brittle, tender, perfectly stringless, and very tasty. Enjoys a tremendous popularity as it combines good appearance and choice flavor with vigorous growth and remarkable resistance to disease. It has proved of particular value on lighter soils where the Round-Pod varieties often fail to produce satisfactory crops. Bears the bulk of its crop within 75 days after planting with the first picking being ready in about 60 days. Pkt. 10c; $\frac{1}{2}$ lb. 25c; lb. 40c; 2 lbs. 70c; 5 lbs. \$1.65.

110 Bush Lima—McCrea's

With so many good Lima Beans already in existence one may wonder as to the desirability of adding still another variety to the list. Those who will grow this new McCrea's Bush Lima will readily understand our reason for recommending this new variety. It is without question the sweetest of all Lima Beans. Though its sweetness is without doubt the most outstanding characteristic, it has many other splendid features that will appeal to both home gardeners and canners. The habit of the plants is vigorous and strong. The growth is upright and there is an abundance of rich green foliage. The short stout pods are very thick. Each pod contains from 3 to 5 large, plump, bright green beans which are so tightly packed in the pod that many of them are almost square. Very productive and of good flavor.

Pkt. 15c; $\frac{1}{2}$ lb. 25c; lb. 45c; 2 lbs. 85c; 5 lbs. \$1.95.

It will pay you to grow these New and Better Vegetables for increased yield and finer quality.

204 Cabbage—Golden Acre

This excellent variety is the earliest round-headed cabbage in existence. It will mature at least 7 days ahead of the regular strains of Jersey Wakefield, considered the standard early of the country. The heads of Golden Acre are perfectly round, firm, and of exceptionally fine texture there being no heavy mid-ribs. An average head weighs about 4 pounds and most of this weight is head since there are but few outer leaves. May be planted close in the row. Pkt. 15c; $\frac{1}{2}$ oz. 35c; oz. 65c; $\frac{1}{4}$ lb. \$2.00.

Pkt. 10c; oz. 25c; $\frac{1}{4}$ lb. 60c; lb. \$1.75.

559 Mustard Spinach—Tendergreen

Though a Mustard, its mild pleasing flavor is more like that of Spinach. Little affected by hot or dry weather and therefore highly recommended for summer greens. Ready for use 3 to 4 weeks after sowing. Pkt. 10c; oz. 20c; $\frac{1}{4}$ lb. 50c; lb. \$1.25.

587 Onion—Valencia

This is the best of the large sweet Spanish Onions. Valued for its exceptionally mild and sweet flavor. We consider it particularly desirable because it will grow to truly enormous size if conditions are anywhere near favorable. In some ways it resembles the popular Prizetaker but the onions are considerably larger and consequently heavier in weight. The onions are round and have a beautiful golden yellow skin and pure white flesh. With the proper culture they will develop into magnificent specimens of the prize-winning type. For exhibition start the seed indoors early and transplant to the garden at the proper season. Pkt. 10c; $\frac{1}{4}$ oz. 25c; oz. 35c; $\frac{1}{4}$ lb. \$1.00; lb. \$3.50.

Sugarstick—A really sensational new Sugar Pea, entirely different from all other Peas in existence

Pods and cross-section are shown in natural size. Note their size, the thick, tender wall, and the larger round peas.

The pods are elegantly curved and they have fleshy walls which are entirely free from fiber or hard tissue. The peas in the pods are large and tender, and of the same luscious sweetness as the walls of the pods. If desired, the peas may be shelled and cooked separately so that two distinct delicious vegetables may be secured for table use. The sliced pods make a splendid addition to mixed salads.

The sturdy vines grow 4 feet tall and are very productive. Every gardener should give this new and most distinct variety a careful trial.

Naturally using the entire tender pods cooked like String Beans produces a great increase of edible luscious produce with the least amount of waste per plant.

Sugarstick is a most productive Edible-Podded Sugar Pea.

602 Parsley—Dreer's Exhibition

This new Parsley is bound to become extremely popular as it combines attractive appearance with the finest qualities of a culinary herb. The compact plants are just one solid mass of finely divided and curled leaves of a most pleasing rich and bright deep green color. Dreer's New Improved Lawn Grass Mixtures

We pride ourselves on the quality of the Dreer Lawn Grass Mixtures which we believe serve the best interest of all gardeners. None of them contain cheap annual grasses or short lived varieties like Timothy which may give temporary results but do not contribute toward the permanence of the lawn or its attractive appearance. Start right with your new lawn by selecting the Dreer formula that serves your purpose best.

"The Dreer" Lawn Grass

*An Unequalled Mixture
for a Beautiful Lawn*

"The Dreer" Lawn Grass produces a smooth velvety rich green sod of finest texture altogether free from grasses which are inclined to produce clumps or knots. Such a lawn is bound to enhance your home grounds providing a rich green setting that cannot be achieved in any other way.

All grasses included in this superb mixture are permanent, fine-bladed, and of a rich deep green color. They are strictly lawn grasses. Every variety of grass in this mixture is included to serve a specific purpose. The strong fibrous roots of some take a hold of the soil and contribute toward the permanence of the sod. Other grasses, particularly Bent grass, are of creeping habit. They are most essential because they quickly cover the entire surface and weave the sod into a carpet of rich green. Yet there are other grasses that help the density and protect the lawn against rain damage and undue wear. The Dreer Lawn Grass weighs 25 pounds per measured bushel.

**Pt. 30c; qt. 50c; 2 qts. 90c;
4 qts. \$1.70; peck \$3.25;**

**½ bu. (12½ lbs.) \$6.25; bu. (25 lbs.) \$12.00;
100 lbs. \$47.00, prepaid.**

Dreer's "Evergreen" Lawn Grass *A Fine Mixture of Good Permanence*

Though less expensive than "The Dreer" Lawn Grass this superb mixture produces a beautiful and permanent lawn. It is made according to our own special formula and is composed of choice grasses which will produce a lawn that will retain its rich green color and velvety appearance throughout the entire summer and fall. In making up this mixture we were careful to use only seed that had been thoroughly re-cleaned. This accounts for the heavy bushel weight.

**Pt. 25c; qt. 40c; 2 qts. 75c; 4 qts. \$1.30; peck \$2.50;
½ bu. (12½ lbs.) \$4.90; bu. (25 lbs.) \$9.50; 100 lbs. \$37.00, prepaid.**

"Fairmount Park" Lawn Grass *Our Popular Low-Priced Mixture*

This popular low-priced mixture is well suited to various soil conditions giving good results even on small city grass plots where the soil frequently is stiff and heavy. It will form a thick turf in a very short time and is most satisfactory for lawns and other places receiving considerable hard wear.

**Pt. 20c; qt. 35c; 2 qts. 65c; 4 qts. \$1.15; peck \$2.20;
½ bu. (12½ lbs.) \$4.00; bu. (25 lbs.) \$7.50; 100 lbs. \$29.00, prepaid.**

"Shady Place" Lawn Grass

The difficulty of establishing a lawn in a semi-shaded position or in places which are shaded during part of the day is easily overcome by the use of Dreer's "Shady Place" Lawn Grass Mixture because it is composed of certain kinds of grasses which naturally grow best under such conditions. Dreer's "Shady Place" Lawn Grass will give you a rich verdant lawn of good appearance. With proper care it will be permanent. Regular feeding of areas under trees and abundant watering during periods of dry weather are of great importance.

**Pt. 30c; qt. 55c; 2 qts. \$1.00; 4 qts. \$1.90; peck \$3.50;
½ bu. (12½ lbs.) \$6.50; bu. (25 lbs.) \$12.50; 100 lbs. \$49.00, prepaid.**

Note the extra heavy bushel weights of the Dreer Lawn Grass Mixtures. These are due to the careful re-cleaning of all varieties used in the various formulas.
