The Lawn

Making and Maintaining a Lawn

Early spring and late summer are most favorable for making or renovating a lawn. Dig the soil to a depth of 6 inches, and pulverize thoroughly. Apply G. & T. Co.'s Grass Fertilizer at the rate of 100 pounds per 2,000 square feet, and rake in well. Sow one of our Special Lawn Formulas at the rate of 1 pound for every 200 square feet, and then rake very lightly, after which roll. Under favorable conditions the grass should germinate in about 10 to 15 days. Do not sprinkle a new lawn with water for the first three weeks, unless the seeding is followed by very hot, dry weather, but after this time it should be watered as required. An application of our Grass Fertilizer each year, using half the quantity suggested above, will keep your grass in a healthy condition.

Grass Seed Mixtures

G. & T. CO.'S IMPERIAL TURF MIXTURE. This superb grass seed is correctly proportioned to give that Old English effect, and is noted for its complete adaptability to variations in soil, climate, and other conditions. Weighs over 25 pounds to the measured bushel, which is an exceptional weight for lawn seed, and heavy seed means pure seed of highest quality, free from weeds and chaff. Lb. 50 cts.; 3 lbs. \$1.45; 5 lbs. \$2.35; 10 lbs. \$4.50; 20 lbs. \$8.50; 100 lbs. \$40.

G. & T. CO.'S EVERGREEN LAWN GRASS. We recommend this for large areas. It is composed of fine re-cleaned grasses and White Dutch Clover of the highest purity and vitality, carefully proportioned to give a green lawn throughout the summer. Weighs 22 pounds to the measured bushel. Lb. 40 cts.; 3 lbs. \$1.15; 5 lbs. \$1.90; 10 lbs. \$3.60; 20 lbs. \$6.75; 100 lbs. \$32.

G. & T. CO.'S BENT FORMULA. Composed of varieties which will make a permanent, luxuriant turf, finer in texture than a lawn of the ordinary type. Containing a liberal proportion of Bent Grass, it is deep, rich green in color and produces the effect of a soft rug, enduring from early spring until covered by snow. Weighs 28 pounds to the measured bushel. Lb. 75 cts.; 3 lbs. \$2.10; 5 lbs. \$3.35; 10 lbs. \$6.50; 20 lbs. \$12.40; 100 lbs. \$60.

G. & T. CO.'S SHADY NOOK GRASS. A mixture of the shade-tolerant grasses, properly blended, that will do well under trees and other shady nooks in the garden. Sow seed at the rate of one pound to every 200 square feet, and apply lime, 50 pounds to every 1,000 square feet. In very stubborn cases it may be necessary to renovate for several years to obtain a rich green sward. If so, add lime each fall, as directed above, and sow seed at the rate of one pound to every 300 square feet. Lb. 50 cts.; 3 lbs. \$1.45; 5 lbs. \$2.35; 10 lbs. \$4.50; 20 lbs. \$8.50; 100 lbs. \$40.

G. & T. CO.'S TERRACE SOD MIXTURE. A mixture of grasses that will produce strong, spreading roots, withstanding drought and sun, and thriving on shallow soils. If slope is very severe, sow along with each pound of seed 1 quart of oats for every 100 square feet of lawn, to help prevent washing by heavy rains. Lb. 45 cts.; 3 lbs. \$1.30; 5 lbs. \$2.10; 10 lbs. \$4; 20 lbs. \$7.60; 100 lbs. \$36.

G. & T. CO.'S SEASHORE LAWN GRASS. A mixture of grasses that are especially suitable for lawns at the seashore. In preparing the soil, work in a liberal amount of sheep manure and top-dress with about 4 inches of good top-soil, as grasses will not grow well in pure sand. Lb. 45 cts.; 3 lbs. \$1.30; 5 lbs. \$2.10; 10 lbs. \$4; 20 lbs. \$7.60; 100 lbs. \$36.

PARK LAWN GRASS (Low-priced Mixture). This is a commercial mixture of good-quality grass seed frequently sold at a higher price. We recommend it only where a fine and durable lawn is not required. Lb. 30 cts.; 100 lbs. \$25.

WHITE DUTCH CLOVER. ¼lb. 20 cts.; ½lb. 30 cts.; lb. 50 cts.; 10 lbs. \$4.

TO OUR FRIENDS AND CUSTOMERS

Few business enterprises maintain their original identity through a period of seventy-seven years or three generations. When they do, there is a definite reason for it - and that reason is seldom hard to find.

We are very proud of our length of service because it has given us seasoned experience and has enabled us to act with sound judgment. It is a time tried policy with us that any transaction which is not satisfactory to you is not satisfactory to us; and it is evident that this policy and the progressive spirit which we have attempted to instill into this business, will keep it foremost in its field.

This year, much time has been devoted to the selection of seed for the flower lover and garden enthusiast. We know that they are the best that can be produced. As we have selected our seed always from that part of the world which produces the best seed of each variety. By this method we offer seeds and bulbs not merely "as good as" any other, but unquestionably the finest that we have ever had for sale.

This same policy and detailed effort has been devoted also to the selection of Farm Implements and Supplies, so that we feel we are better equipped than ever to satisfy the requirements of the increasing number of customers who look to us each year for their needs.

Cordially yours,

M. S. Griffith

Griffith & Turner Co.'s Choice Flower Seeds

ALL FLOWERS ARE DIVIDED INTO CLASSES

A.—Annual flowers produce blooms the same growing season. The seed is sown in the open ground as soon as the weather permits. If early plants are desired, the seed may be started inside during the late winter. These plants should be transplanted into the garden when all danger of frost is past. Annual plants will not live through the following winter.

B.—Biennial flowers usually require two growing seasons to bloom and complete their life. They seldom flower the first season. The seed is usually sown outdoors during June, July, and August. As the plants grow, they should be thinned to prevent crowding, and finally transplanted in the fall or spring to the place where they are to flower.

H.P.—Hardy Perennial flowers, as a rule, do not bloom until the

second year, after which they continue to live over a period of years. Some perennials last a lifetime, while others may perish within three, four, or five growing seasons. There are many perennials that will flower the first year from seed, but as they do not usually live through the winter in this locality, they are generally accepted as annuals. Perennial seed, like Biennial seed, is usually sown outdoors during June, July, and August. As the plants grow, they, too, should be thinned to prevent crowding, and finally transplanted in the fall or spring to the place where they are to flower.

H.H.P.—Half-hardy Perennial flowers.

T.P.—Tender Perennials require the same treatment as Hardy Perennials, except they must be protected or put in the greenhouse during the winter.

PLANTING INSTRUCTIONS

Flower seed should be sown in good rich soil, and generally at a depth three times the diameter of the seed. If the seed is very small, it is best to mix it with a little sand, in order that the seed can be sown evenly. Do not attempt to cover fine seeds, but press them into the soil with your fingers. Fertilizer should not be applied when the seed is sown, but we recommend that G. & T. Co.'s Garden Fertilizer be applied regularly while the plants are growing.

No Better Cabbage Seed Is Obtainable at Any Price

CABBAGE

Sow 1 ounce of seed to 100 feet of row, for plants

CULTURE. Cabbage will thrive on any good corn-land, though the stronger the soil the better they will develop. Plow deeply and manure very liberally, as Cabbage is a strong feeder, and will repay the care bestowed on it. The early sorts bear planting from 18 inches to 3 feet apart in the rows, with the rows from 2 to 2½ feet apart, the distance varying with the size. For early use, sow in a hotbed in February or March. In April the plants may be set out in the rows. For late crop, sow in May or June, and transplant as soon as the plants are 5 to 6 inches high. The ground should be thoroughly cultivated every week until the plants meet in the rows.

Italian Broccoli

BRUSSELS SPROUTS

Sow 1 ounce of seed to 100 yards of row

The plant resembles the cabbage, the edible part being the numerous very small heads or sprouts 1 to 2 inches in diameter formed on the stalk at each leaf-joint. The culture is the same in all essentials as for cabbage, except that the leaves should be broken down in the fall to give the little heads more room to grow.

CULTURE. For very early Cucumbers, sow April 1 in a hotbed upon pieces of sod (grass side down), so that they can be readily transplanted to the open ground in rich soil when danger of frost is over, or protect by hand-glasses. The vines require a warm location for early Cucumbers. Plant after the ground has become warm, in hills 4 feet apart for the smaller varieties and 5 feet for the larger sort. For pickling, sow from middle of June to last of July. Manure with wood-ashes, fertilizer, or some well-rotted compost, working the manure just under the surface. Sprinkle the vines with Slug-Shot plaster, or air-slaked lime to protect from bugs. The Cucumbers should be gathered when large enough for use, whether required or not; if left to ripen, it destroys their productiveness.

CULTURE. Onion Sets require clean, very rich soil, which should be thoroughly cultivated, or they will not do well enough to pay for the trouble of planting them. Disturb the roots of the Onion as little as possible, either in thinning or hoeing, and never hoe earth toward them to cover or hill, as we do most other things.

Peas Fresh from Your Garden Have a More Delicious Flavor

PEAS Selected Stocks

One pound is about 1 pint, 2 pounds about 1 quart, 15 pounds about 1 peck

CULTURE. The dwarf varieties should be liberally manured; the tall sorts will run too much to vine if heavily manured, it being better to depend on the richness of the land that was previously in good condition. Plant the dwarfs in rows 2 feet apart; those varieties attaining a height of from 2 to 3 feet in rows 3 feet apart, and the rows of the tallest sort 4 feet apart. Bushing the tall kind when 6 inches high, on poles set every 6 to 8 feet, with twine fastened to them about 4 inches apart, will answer nicely.

No Vegetable Has More Uses Than the Tomato

New Stone Tomatoes

TOMATOES

CULTURE. For early fruit, sow seed March 1 in the hotbed or in pots in a sunny exposure in the house. When the plants are about 3 to 4 inches high they should be set out 4 to 5 inches apart in another hotbed or coldframe into small pots, allowing a single plant to a pot. Expose to the air as much as possible to harden, and about the middle of May set the plants in the open ground at a distance of 4 to 5 feet each way. Water freely at the time of transplanting and shelter from the sun for a few days until the plants are established.

Tomatoes will admit of training to stakes or trellis of various kinds. The usual method is to set one strong plant to a stake, using stakes 5 to 7 feet high and tying the plant up with strong, soft twine. Prune out quite freely as the vines advance in growth.

GENERAL-PURPOSE FENCE

Galvanized Steel Fence Posts

These Posts are neat, strong, durable, and easy to erect. They will give you much more and better service than can be expected of wood Posts because, all being alike in size and quality of material, you get benefit of every Post in the fence from year to year, while wood Posts rot and decay. The line Posts are strong enough to hold up any wire fencing, and furnish all necessary resistance. The end and corner Posts are so strong that they will maintain any wire fence made.

The New Clipper Grain-, Seed-, and Bean-Cleaner

These Cleaners are guaranteed to be first class in every respect. We furnish the best outfit of screens ever sent out with a farm mill. Our perforated zinc screens are graduated in 64ths of an inch in both round and oblong holes. Our woven wire screens are made of plated wire with the meshes uniform and true to count. The zinc screens will not rust and our plated wire screens will last for years if properly cared for.

Vertical Air-Blast. This is a feature that no other Cleaner has, and it makes possible some very difficult separations that can be made in no other way.

Oliver Drop-Deck Cylinder Loader

The Oliver Cylinder Hay Loader with the Drop Deck combines in one simple, sturdy machine all of the best qualities desired in a hay loader. Above everything else, it is built to clean the hay off the ground and place it on the load without shaking off the leaves which are so high in feeding value.

The curved teeth pick up all the hay in the windrow. The 8-cylinder bars, with 16 teeth to each bar, are like a multitude of small pitchforks which slide under the windrow and deliver it to the hay carrier without bunching or tearing the hay apart. The speed of the cylinder and the speed of the hay carrier are proportioned so exactly that the hay is carried in a continuous ribbon from the windrow to the load.
