Rare Values

in This Book . . .

THOUGH the depression period has ended, prices on the materials listed in this catalog have not been advanced from the extreme lows except in a few instances. Thus, this book is filled with rare bargains for the garden lover, and offers opportunities for garden investment which may never return.

Tulip prices are slightly higher, due to the depreciated dollar and to price control operations by the Dutch government. But these factors are just beginning to be felt; and it is the general opinion that a considerable further advance is inevitable a year from now; so that purchase at this year's prices will represent a substantial saving.

In every department, indeed, present values in garden materials are exceptional, and the prospect for increases as a result of business recovery makes it the part of wisdom to purchase this fall whatever you can which will add permanent beauty to your garden. We list below some of the outstanding values to be found in this catalog.

Tulip Fantasy, 3 for 40c.

This tulip, illustrated by the beautiful natural color photograph by Godfrey Lundberg reproduced on our front cover, is not merely a new variety; it is a new type. To the beauty of the typical parrot petal, thick, large in size, and fringed, it adds a strong, upright stem which other parrots lack, and the true pink color of Clara Butt, loveliest of all tulip pinks. A garden without Fantasy is distinctly lacking, and here is an opportunity to remedy the lack which may not come again.

Paper White Narcissi, 12 for 50c

This year's crop of Paper Whites, grown especially for us, is of exceptional quality. We do not sell bulbs less than 13 cms. in circumference, since the smaller bulbs cannot be depended upon to flower. Send us your order and you will not be disappointed. Mammoth bulbs, 14 ctm., 60 cents a dozen; Jumbo bulbs, 15 ctm., 75 cents a dozen.

Rainbow Garden of Tulips, 60 bulbs, \$2.00

This famous collection has made thousands of gardens beautiful in past years. This year its value is greatly increased by giving six each of ten named varieties, each separately bagged and labeled. See Page 1 for list of names.

Ten Different Lilies, \$1.60

These ten varieties offer no difficulties to the amateur: Regale, white; Canadense, yellow; Superbum, orange; Pardalinum, yellow; Philadelphicum, orange; Elegans, red; Tenuifolium, coral; Tigrinum, single, orange; Tigrinum, double, orange; Umbellatum, orange. By express, one of each, 10 bulbs, \$1.60; two of each, (20), \$3.00; six of each, (60), \$8.50; twelve of each, (120), \$15.00.

Narcissi for Naturalizing 12 for 50c

Is there a sight more welcome than a drift of nodding daffodils under a group of trees or a shrubby planting, brightening the April landscape? We have a wonderful mixture of daffodils of all types, including large trumpets, Leedsii, Barri and Poeticus, which are exactly suited for naturalizing. Doz., 50c; 100, \$3.50; 1,000, \$30.00.

Peony President Taft, 50c

Rated at 8.7 by the American Peony Society the variety President Taft, or as some call it, Reine Hortense, is without dispute one of the front rank. A vigorous grower, free-blooming, it produces flowers among the largest. Its color is a uniform light pink, glowing like an opal, never fading. Cut flowers last a week. If you do not possess this variety, we do not know where you could buy more beauty and lasting satisfaction for 50 cents.

Six Best Peonies for \$6

The amazing values now obtainable in highly rated peonies is indicated by this price. The six varieties offered each preceded by its American Peony Society rating, are as follows: 9.9 Le Cynge, white; 9.0 Longfellow, red; 9.7 Solange, cream; 9.8 Therese, pink; 9.4 Tourangelle, white; 9.3 Walter Faxon, pink. Each near the unattainable perfection which is represented by 10 points, and the unquestioned leader in its color class. Your collection will be placed at once in the front rank by the expenditure of \$6.00, a sum which a short time ago would not have purchased a root of a single one of these varieties.

Eight Outstanding Irises, \$2.95

If your iris collection is not up-to-date it can be made so at small expense by adding these eight recent introductions: Frieda Mohr, giant pink toned, fragrant flower, 42 inches high; Germaine Perthuis, enormous violet purple, fragrant; Labor, dark violet suffused with copper, a new color; Micheline Charriere, giant white; Morning Splendor, red effect; Santa Barbara, giant light blue self; Souv. de Letitia Michaud, largest of all; Vesper Gold, yellow with violet blend. A magnificent collection of new varieties, for \$2.95.

Our 1933 Rainbow Garden of Tulips—Six Each of These Ten Varieties

LOUIS XIV, 36 in., Breeder, a giant flower of purple and old gold, considered by many the finest of all tulips. A few years ago it sold for \$1 a bulb.

BRONZE QUEEN, 28 in., Breeder, a soft buff outside, inside a golden bronze. A striking color rare among flowers and luminous when planted with contrasting tones.

INGLESCOMBE YELLOW, 18 in., Cottage, a rich yellow flower which though of the Cottage class, has the cup shape of the Darwin and is sometimes called the "yellow Darwin."

PRINCESS ELIZABETH, 26 in., Darwin, largest of the soft pastel pinks, a rich rose toning to silvery rose at edges. Unsurpassed in its color.

MME. KRELAGE, 27 in., Darwin, deep pink flower with paler edging, large blossom, one of the earliest Darwins.

PANORAMA, 24 in., Breeder, a copper red with large flower, an art tone which glows in the border.

FARNCOMBE SANDERS, 25 in., Darwin, fiery scarlet with white center marked with blue; a vivid color and perfectly shaped, large blossom.

LA TULIPE NOIRE, 25 in., Darwin, the famous "black tulip," really a dark purple, which serves as a beautiful foil for pink and yellow companions.

CITY OF HAARLEM, 27 in., Darwin, immense flower of cardinal red, blue base. Unrivalled in brilliant color and size among the reds.

BLEU AMIABLE, 26 in., Darwin, a violet purple, with distinct steel blue shading; large flower, a leader among the violet blues which are invaluable for color contrast planting.

After Oct. 10 it may be necessary to change this collection. Order early to insure receiving above varieties.

No garden investment can be made which will give greater return in beauty and pleasure, than the purchase of these sixty bulbs which, if properly planted, will bloom each spring for many years, perhaps increasing in number.

Their value this year is greatly increased for those who wish to plant for color effect. Instead of all sixty bulbs being mixed so the colors cannot be accurately grouped in planting, each different variety as listed above is separately bagged and labeled with its variety name.

This gives absolute control of the arrangement. You can make your own color scheme; and few flowers are so adaptable to planting for color effect as the tall late tulips.

The low price for this collection does not mean inferior bulbs. The bulbs are not of the first size, such as those which we list on the main pages of this catalog, which are of the size required for forcing in greenhouses. But the bulbs in the Rainbow Garden collection are of flowering size and entirely suitable for planting outdoors in the garden.

Our list insures you a collection in which all colors of the spectrum are represented and enables you to plant them according to any color schemes you may prefer. There are two general methods of achieving color harmony: 1, harmony by analogy, and 2, harmony by contrast. In the first, like colors are planted together; in the second, contrasting colors are placed in proximity.

But even if you do not care to enter into the technique of color arrangement and make a studied pattern of the varied colors of your rainbow collection, you can still count upon a brilliant display next May. Because the soft, pastel colors of the May flowering tulips never clash. No matter in what sequence your groups are placed, there will always be beauty and harmony among them.

Page for Bulb Beginners

If a beginner in gardening sought the flowers most certain of success for his initial trial, he would be directed to the fall bulbs. If a few simple rules be observed one cannot fail with these. Within the bulb which we sell you is a flower. It has grown half way to maturity in Holland fields. Plant it in your garden in a well drained spot this fall, and it will complete its growing during the winter and early spring. Its flower will greet you before the weeds appear.

Not even cultivation is required for this harvest. No insects will prey upon the flowers of spring bulbs, and they have no diseases to require expert treatment. Of all the rewards won by the gardener, that found in the beauty of spring-flowering bulbs is the most dependable and satisfying.

A gardener may love the winter, his season of rest, when he plans by the fireside the months of enjoyment to come. But is there ever a one who fails to grow impatient and long for the day when the first flower of spring shall open?

Without the bulbs, this day would be late, indeed. The crocuses, scillas, and daffodils begin the garden season. In March (in Chicago's latitude) they thrust their heads above a desolate soil, and bring a welcome message to those who watch.

Spring-flowering bulbs prolong the garden season by a month at least. Not only that, but among them are flowers which even did they come in June, when gardens are crowded with glory, no gardener would be without.

There are in the garden season a dozen flowers that dominate, one after the other herbaceous borders. Each in its season is the headliner of the show. The complete border must contain them all, let it have what else it will. They are, in order of appearance: Daffodils, tulips, iris, peonies, larkspur and lilies, hollyhocks, phlox, dahlias (where they can be grown), zinnias, cosmos, hardy asters and chrysanthemums. From March to Thanksgiving day their pageant continues. All these may be planted in the fall, except the dahlias, zinnias, and chrysanthemums.

The purchase of spring-flowering bulbs should not be considered an expense, to be charged to one garden season. It is an investment. A stock of bulbs has been known to produce flowers in the same garden for a century.

Even the labor of lifting bulbs after flowering may be dispensed with. All do excellently when left undisturbed year after year. This practice, indeed, is recommended for the daffodils. And tulips will suffer small loss if allowed to remain in a bed where they have done well, with annual doses of bone meal, and occasional liming.

How to Plant Bulbs

PLANT all fall bulbs except tulips as soon as they can be secured. Plant tulips when the leaves fall.

Drainage is essential. Dig the soil deeply—eighteen inches if possible, pulverize fine, and if heavy, place a cushion of sand under the larger bulbs, especially lilies.

Use no barnyard manure unless it can be spaded into the ground the spring previous to planting. Bone meal is the only safe fertilizer and should be used freely.

If planting with a dibber, take care that the bulb rests on the soil and is not "hung"—that is, left with a hole beneath it caused by the point of the dibber.

Miniature Daffodils

The following are charming subjects for rock work, where their dainty flowers are seen to perfection. They should be left undisturbed for years, and if happy will soon establish themselves and afford a lovely picture in early spring. All (except monophyllus) like moisture, and should therefore be planted at the foot of the rockery. Bulbocodium monophyllus flourishes in a warm dry sheltered situation planted in almost pure sand; when coming into bloom give water freely. Triandrus albus (Angel's Tears) delight in partial shade and a light gritty soil, and should be given a well-drained position.

Bulbocodium Conspicuum. Yellow Hoop Petticoat, flowers rich golden-yellow of hoop-petticoat form and rush-like foliage, height 6 inches. Each, 15c; doz., \$1.60; 100, \$12.00.

Triandrus Agnes Harvey. A beautiful chalice-cupped hybrid, perianth snow-white, cup pure white sometimes flushed a soft apricot, one to three blooms on a stem, slightly drooping, height 13 inches. Each, 15c; doz., \$1.50; 100, \$10.00.

True Jonquils

These are old fashioned flowers that belong in the rock garden. They like a shady, moist location, are fragrant, and bear flowers in clusters.

Jonquilla Simplex. The true single sweet jonquil, of light elegant growth, bearing out of doors in May clusters of numerous small rich yellow flowers of delicious scent. Each, 10c; doz., 90c; 100, \$6.00.

Jonquilla Flore-Pleno. The old double sweet jonquil, produces in May little heads of rich yellow double flowers, very fragrant and attractive for cutting. Each, 10c; doz., \$1.00; 100, \$7.00.

THE FINEST subjects for the rockery are found among the minor bulbs, which by very reason of their dwarf stature, and delicate blossoms, are likely to be outshone in the border by more conspicuous rivals. These more gorgeous subjects, the tall late tulips, and the giant daffodils, would never do in rock gardens; they would be out of scale, in size and character. But minor bulbs find among the rocks effective settings, where their most elusive beauties are made visible.

In planting bulbs in the rock gardens, there are no especial precautions to be taken. They like good drainage. Most of them need not be planted deeply; four times the diameter of the bulb is the general rule. Those that blossom early will look best against the background of a rock. They do not need protection from the cold, but will escape many dangers if they are shaded from spring sunshine which might bring them prematurely into growth. In shallow soil, a mulch which will protect them from the wash and spatter of March rains is advisable. They may be planted alongside other perennials, if one considers that their foliage must be left to turn yellow after they bloom, and places them where they will not interfere with treasured small plants which blossom soon after them.

First of the bulbous flowers to blossom in the rock garden are the white snowdrops and blue chionodoxas. They appear during the first warm spells of spring, sometimes weeks before other flowers. They are priced and their varieties described on Pages 18 and 19 of this catalog.

Scillas are excellent for rock gardens, with their vivid blue flowers and perfect hardiness, and tendency to multiply. Scilla Siberica, and the species Nutans alba, both described on Page 19, are the types most suitable for rockeries.

Crocuses in small groups give vivid color in the early spring. Groups of yellow contrasting with masses of blue provide a pleasing color effect. On Page 18 will be found a selection of named varieties.

At about this time also appear the golden blossoms of the winter aconite (Eranthis Hymalis) resting on cushions of their green leaves. It prefers a moist spot, perhaps near the rockery pool. See Page 18.

Soon after the miniature daffodils appear, delightfully dancing in every vagrant breeze. They are fully described above on this page.

When narcissi are still blossoming, species tulips will come into flower. These native forms differ from the cultivated tulip in their habit of growth, and height, but have flowers as large and colors even more brilliant.

Some have quaint form, such as Cornuta stenopetala, whose twisted petals are illustrated on Page 14. The earliest of all is Kaufmanniana, a creamy flower with carmine edging. Greigi Aurea brilliant orange scarlet, has interesting spotted leaves. A list of the species tulips is given on Page 14, and we do not know any of this race that will attract more interest and admiration in the spring garden. Give them a place in the sun, rather dry and hot.

The spring snowflake (Leucojum Vernum, Page 19) is a good rock garden subject. The checkered lily (Fritillaria Meleagris, Page 18) with its quaintly colored, checkered bell flowers, is curious and interesting. The dog's tooth violets (Erythronium) sometimes called trout lilies, are much at home in soil pockets rich in leaf mould, in shady locations (Page 18.)

Muscari or grape hyacinths, blossoming in May, are effective with their blue spikes; they increase freely. (Page 19).

New Tulip Varieties

THOUGH the tulip has been bred for centuries, and the remarkable development of this family is proof of the ability of man to improve nature, progress with this flower is by no means at an end. Each year new varieties are introduced which excel some older ones in color, size or form.

Until recently the versatile Darwin clan lacked yellow varieties, and its few whites were small and of poor color. Now we offer true yellow Darwins of typical cup-shape and pure color, and giant white Darwins of unflawed purity, which are of striking beauty in the spring border. On this page the newest varieties for every class are listed for study by those who like to add each year improved varieties to their plantings.

Giant White Darwins

Avalon An excellent newcomer. Tall, strong, straight stem and pure snow white color. This tulip possesses unusual beauty of form and is very vigorous. Doz., \$1.50; 100, \$10.00.

A Formula for Fine Lawns

Vaughan's Special "Private Estate" Contains Seed of Bent Grasses

AUTUMN is the most favorable time to make new lawns and repair old ones. The sturdy growth of seedling plants is favored by the cool nights and usually plentiful supply of moisture. As the days grow shorter and the weather cooler, the growth of the plants changes, with more root growth and less top growth and a general thickening and strengthening of the plant. Grass seed can be sown the latter part of August. The earlier seed is sown the longer young plants will have in which to establish themselves before winter comes.

See that the seed is well covered. Rake it into a new seed bed and roll so that soil is firmed over the seed bed. Where seed is sown on an old lawn, always top dress it. Ask for our booklet on lawn making.

We carry in stock seeds of all recognized lawn and golf course grasses which can be grown from seed and on request will gladly quote prices of any type not offered on this page.

Vaughan's "Private Estate" Bent Formula FOR LAWNS "DE LUXE"

The unexcelled beauty and velvet smoothness of creeping bent putting greens has caused a demand for a lawn mixture which contains seeds of the bent grasses.

For those who are interested in bent grass we highly recommend our Private Estate formula as it will require less mowing and less attention than pure bent grass lawns.

In addition to Kentucky Blue Grass of the highest quality, to insure a foundation for your lawn, Private Estate formula includes an important proportion of bent. The bent grass will become established and spread, producing a heavier growth and smoother texture. Private Estate formula produces a fine, heavy turf, which with proper care will constantly improve, and which will be more resistant to "Brown Patch" and other diseases than pure bent.

Vaughan's "Chicago Parks" Lawn Seed The Standard Blue Grass Lawn Formula

This blend is composed of heavy, re-cleaned seed, blended according to the formula proved in our 57 years' experience to be the best for permanent lawns under American conditions and recommended by the Department of Agriculture. Re-cleaned Kentucky blue grass and red top form the bulk of this blend, which includes also white clover in the correct proportion. Our blend produces a lawn that will endure. Flowers You Can Grow Indoors

Lilies of the Valley

THESE beautiful, fragrant flowers may be brought to flower in 18 to 21 days, if pips from cold storage are used. They are easily forced in a bowl, if planted in sphagnum moss and kept well watered. Their dainty fragrance is preferred by many to the large Paper White Narcissi, and they are much quicker to flower. Do not order more than you intend to use at once as the cold storage pips will not keep. Plant about 25 pips in a 7-inch bowl, place in a warm temperature, 65 degrees Fahrenheit and shade from light until leaves and spikes are well developed, then admit light gradually. Increase temperature to 75 degrees or 80 degrees if possible. An inverted pot over each bowl answers admirably to shade them. They may be forced in soil the same way, in a 7-inch pot or pan. This is the treatment for cold storage pips only.

COLD STORAGE PIPS, ready November 1. 25 for \$2.00; 100 for \$5.00, postpaid.

SPHAGNUM MOSS, sufficient for 25 pips, 10c, postpaid.

Lilies on Your Table All Winter

One month covers the time from planting cold storage lily of the valley pips, through flowering, and fading. To keep your bowl filled through the winter we have arranged to book orders for divided shipments, a month apart. Cold storage pips must be planted promptly on receipt. We will send the first shipment at any date you wish (Nov. 25 will give you Christmas flowers) and will duplicate the shipment every 30 days thereafter, as long as you wish (until April 1). Minimum shipment is 25 pips, for \$2.00, prepaid to 300 miles. For two months' supply (25 each 30 days), send \$4.00; 3 months, \$6.00; 4 months, \$8.00; 5 months, \$10.00.

Their culture is simple, and with good strong bulbs such as we supply, flowering is sure. Plant bulbs in shallow bowls filled with pebbles, or fibre, and water. Keep in the dark until roots form (about 2 weeks) then bring into light. A day temperature of not over 70° is best. Three bulbs for 25c.

Chinese Sacred Lily (Narcissus)

THIS narcissus is called by the Chinese the "Joss Flower" or "Flower of the Gods," and "Water Fairy Flower." It is highly prized for the abundance of its flowers and its marvelously rapid growth. The flowers are white, with yellow cup, and very fragrant. Each bulb produces several flower-spikes. In China and Japan the bulbs are grown in the living rooms in fancy bowls filled simply with pebbles and water. Place in a sunny window by day and on a table near the center of the room by night, as frost destroys the flower buds. Care should be taken that it is not placed in a draft, as this may cause non-flowering. Recommended for Christmas flowering.

Amaryllis

OF ALL bulbs which the amateur can grow successfully indoors, the Amaryllis is at once the largest, most beautiful, surest to flower and most easily handled. Our new hybrids, especially, are so gorgeous in size and coloring as to amaze those not familiar with them. From a single stem, spring from one to three lily-like flowers, six to eight inches in diameter.

Place only one bulb in each pot, covering it as far as the neck or upper narrow part. Water sparingly at first until the flower shoots begin to appear. Some growers keep them in the dark until the flower stems are four or five inches long, and then bring to light.

After flowering they should be placed in a warm window, or set outside in sand or cinders and watered every day (sometimes twice a day), until the end of August when water should be gradually withheld and the bulbs allowed to go to rest. In the fall they can be forced again as with new bulbs.

EQUESTRE. Orange-scarlet. Each, 15c; doz., \$1.50; 100, \$12.00.

Gift for Your Gardening Friend

Nothing will so delight the garden lover as a gift of something for the garden. You may not know just what your friend most desires—whether a lily bulb of some prized variety, tulips of just the right color to fill a certain place, or an implement which will make her work in the garden easier. You may place the coveted treasure within her grasp by sending her a gift certificate from Vaughan's Seed Store, which can be exchanged for anything listed in our catalogs, which illustrate, describe and price everything a gardener needs or desires.

Hyacinths in Pots For Winter Blooming

ALIGHT, rich soil produces the best flowers. Place each bulb one inch deep, an inch and one-half from each other bulb or edge of pot. Water well, and set away in a dark, cool cellar, or an outdoor pit which is well drained. If outside, cover with three or four inches of sand or ashes. Let them remain there for eight or ten weeks to root, then bring them into a warm room, but keep them in the dark (cover the pot with a paper bag, cloth, etc.). Then when the flower spike is three or four inches out of the bulb, they may be exposed to the light, and will open beautifully. The larger bulbs are best for indoor growing, the largest bulbs throwing the most magnificent flower spikes. French-Roman Hyacinths are excellent for growing in pots, flowering earlier than the others.

Hyacinths in Glasses

Fill the glass with clear, soft water, so as to nearly touch the base of the bulb, putting a small piece of charcoal in each glass to keep the water pure and sweet. The filled glass should be placed in a dry, cool, dark place, and kept there until the roots almost touch the bottom of the glass, when they may be given more heat, and gradually exposed to the light. Water must never be changed, but only be replenished. Large bulbs are best for this purpose.

Hyacinths in Gardens

Hyacinths are returning to popularity for both formal beds and border plantings. They provide much needed blues. Plant in any good, well drained soil. The beds should be raised several inches above the surrounding

ground to prevent lodgments of water which causes bulbs to rot. Bulbs should be set six inches apart and six inches deep. The smaller bulbs produce good results when planted outdoors.

Numbers following name of variety indicate time of flowering, each number following in time of flowering.

Bulbs Which Have Been Forced

GARDEN makers often inquire if bulbs which have been forced in the house in Winter can be planted in the ground when Spring comes. A few kinds can be treated in this manner. Tulips planted out will gradually recover and bloom well in a year or two. Easter lilies will often flower again in the garden in the Fall, but will not live over. Some hyacinths can be planted out and will make blooming plants in the hardy border. One variety, L'Innocence, can even be forced a second time, but will have weak stems. Freesias can be held over and forced a second season.

Mendel Tulips Mixed are the result of years of work crossing the earliest of single early tulips, the Christmas flowering Duc Van Thol type, with the tall late flowering Darwins. Triumph Tulips Mixed Although they flower a few days later than the Mendel tulips, the stems of most of the Triumph tulips are taller and the color range includes not only the pink shades of the Darwins, but also the coloring and form of the Cottage type, as they are a cross between the single early types and the Darwins and Cottage. Doz., 75c; 100, \$5.25; 1,000, \$48.00.

See Cottage Tulip "Miss Blanche" for low-priced, pure white Tulip of Darwin shape.

Cottage Tulips

COTTAGE tulips are inclined to have pointed petals, sometimes turned back, and the blossom to be smaller and more slender. But they harmonize perfectly with the Darwins and Breeders and supply a quality of clear, bright color which these lack, while they have pure yellows not found in others. Every known shade is to be found among these, from deepest crimson to bright red, orange, glorious yellows, pink and a host of delicate tints of yellow, pink-cream and heliotrope. They blossom a few days later than the Darwins, often carrying the flowering period of Spring bulbs into the early days of June, especially if planted in a shady position. Many sweet-scented varieties are included, such as *Gesneriana Lutea*, and *Mrs. Moon*.

***For Pots.** When grown in pots, these, like the Darwin tulips, can be had in flower indoors during March and April, in a temperature not exceeding 55 degrees. Those best suited for growing in this way are marked*.

Breeder Tulips

BREEDER tulips are closer to the parent type of this ancient flower than others.

The origin of the tulip is hidden in the dim past. But we know that the Dutch fanciers who in 1634 to 1637 speculated in new varieties during the reign of tulipomania grew the "mother bulbs," or Breeder tulips, to produce new striped varieties by "breaking." The Darwin race is supposed to have developed from the Breeders. For a long time the dark, rich colors of the latter were neglected in favor of the brighter and clearer tones of the other types. But recently taste has changed, and the richly hued Breeders have come into favor.

They blossom in May, and though not so tall, perhaps produce, as a rule, even larger blossoms than the Darwins. The colors include many rare among flowers—browns, bronzes, purples, blue-blacks, deep mauves, dull gold and dark lilac all exquisitely blended.

Planting. Plant the same as Darwins. Parcel post weights are also the same.

Bacchus Despite the fact that this is one of the oldest Breeder tulips in existence, having been introduced over 300 years ago, there is no other tulip that can be called its superior in clear, richness of color and beauty of form. The flower is rather narrow and long for a Breeder, the color is very similar to the purple of Concord grapes. Height, 28 inches. Doz., 90c; 100, \$6.25; 1,000, \$58.00. (Illustrated on Inside Back Cover.)

Brigadier A chestnut-brown shaded orange, bordered lighter orange, oval shaped flower of good substance. Height, 27 inches. Each, 20c; doz., \$2.00; 100, \$15.00.

Bronze Queen (28 in.) Soft buff, inside tinged golden bronze, good forcer. Doz., 65c; 100, \$4.50; 1,000, \$42.50. (Illustrated on Inside Front Cover.)

Cardinal Manning An extremely late flowering tulip. It warms the heart to see the rich wine red flowers of this variety open fresh and bright after most of the others are drooping with old age. Height, 28 inches. Doz., 65c; 100, \$4.50; 1,000, \$42.50.

Chestnut Very dark brown, almost black. Height, 24 inches. Doz., 65c; 100, \$4.50; 1,000, \$42.50.

Copernicus Dark coppery bronze, with a slight flush of bronzy old-rose; interior is a warm brown, with a yellow base. The flower is large, carried upon a sturdy stem. Doz., 90c; 100, \$6.00; 1,000, \$54.00.

Creation Without question one of the finest orange bronze tulips ever introduced. When in full bloom the flower becomes bright orange with a delicate shade of bronze. A glorious tulip when forced in mid-January. Large flower on a tall and strong stem. Each, 20c; doz., \$1.75; 100, \$12.00.

Don Pedro A beautiful shade of coffee-brown, shaded maroon, inside rich mahogany. Most fragrant. Per doz., 80c; 100, \$5.50; 1,000, \$52.50. (Illustrated on Inside Back Cover.)

Golden Buff A tremendous tulip on a tall and stiff stem, dull golden buff, center greenish yellow. When forced this flower becomes bronzy-yellow and is superior to any variety in this shade. A color as yet not found amongst the breeders. Each, 35c; doz., \$3.50; 100, \$25.00.

Golden Bronze (24 in.) Beautiful bronzy yellow, good forcer. Per doz., 80c; 100, \$5.50; 1,000, \$50.00.

Goldfinch Large golden chestnut, interior mahogany brown, flushed lilac through center of each petal, pointed flower on tall strong stem. Height, 29 inches. Doz., 80c; 100, \$5.50; 1,000, \$52.50.

Indian Chief Above all other tulips, even Louis XIV and Roi Soleil, Indian Chief towers like a giant, dwarfing in comparison varieties that we long considered unsurpassable. The flower is enormous, very widely opened, and squarely built. The flower is Indian brown in color, the petals are of very heavy texture, the stem extremely heavy and straight as a ram-rod. Height, 38 to 40 inches. Each, 20c; doz., \$2.00; 100, \$15.00.

TWO OR THREE weeks of brilliant color in April, following the daffodils and preceding the Darwin tulips, are worth much to any garden. The early tulips alone can supply it; and among them can be found varieties to play almost any part your garden scheme demands. It is a mistake to think of the early tulips as all short-stemmed, and too bright in color. It is true their brilliancy cannot be excelled by any other class of their own family or any other flower family that we know. But there are also varieties of delicate tints and shades, as beautiful and with flowers as large as anything the May-flowering classes can produce. In height, 12 inches is not uncommon, and a graceful carriage fits these taller kinds to serve in any role a Darwin would grace.

Explanatory. The number following the name of the variety denotes the height in inches, while the (a) and (b) indicate their earliness of bloom—the (a's) flower together and are earliest; the (b's) flower together, but are somewhat late. The Duc Van Thol Tulips should be used for pots only.

TULIP KEIZERSKROON

Double Early Tulips

THERE is a distinct revival of the popularity of double tulips. Coming a little later than the singles, they last much longer, and where the single and double are planted together the season of flowering is prolonged from two to three weeks. The double tulips require a soil more fertile than the singles for perfection of blossoms; and where well grown their mammoth peony-like flowers of delicate or brilliant coloring are most effective either in groups in the border, or in formal beds. The double tulips do very well when grown in pots for winter blooming, but they must be forced more slowly than the single tulips.

Explanatory. The number following the name of the variety denotes the height in inches, while the (a) and (b) indicate their earliness of bloom—the (a's) flower together and are earliest; the (b's) flower together, but are somewhat late.

TULIP FANTASY
Clear Pink Parrot Type

Parrot Tulips

THEIR fringed and corrugated petals with their wonderful variation make these old-fashioned flowers the most curious of all tulips. Flowering at the same time as other late sorts; they are entirely distinct from any other; the flowers are thick-petaled with extra long stems, and keep extremely well after being cut. The average height is 15 inches.

REMBRANDT tulips are in reality "broken" forms of Darwin tulips. Broken tulips, on account of their odd colorings and variegations, were very popular at one time, and while the modern tendency to favor self-colors is recognized generally throughout all countries, these broken forms possess splendid decorative value. The stems average from 18 to 22 inches in height.

Striped Tulips

THOUGH too gay for modern taste to serve in large plantations, the old-fashioned striped tulips are beautiful. They prove that the Dutch tulipomania was not without excuse, and no gardener who wishes his collection to be representative will be without some specimens.

SPECIES, TULIP CORNUTA STENOPETALA

Wild Tulip Species

For the Rock Garden and Hardy Plant Border

The general characteristics of the various species, all of which are natives of Asia Minor and Central Asia, are bright colors and recurved petals. These Tulips do not always feel happy in their new surroundings and after two, or possibly three, seasons they will disappear. With care and the provision of suitable quarters they will flower quite satisfactorily. They feel best contented in rock gardens and borders.

Daffodils or Narcissi

Prices are Very Much Reduced Because of a Good Crop

COMING in March or April, Narcissi or Daffodils, are the first of the flowers that dominate. They are most pleasing in natural arrangements. They like to nestle at the feet of shrubs. Once planted they need not be lifted until they suffer from crowding.

The yellow large trumpets like a fairly heavy soil, while the white trumpets and Leedsii take more kindly to a sandy soil. Do not use fresh manure, but fertilize only with bone meal. Plant the bulbs six inches deep and the same distance apart, in a deep, well worked soil.

Trumpet

Aerolite A golden giant with flowers beautifully proportioned, graceful despite its size; perianth deep primrose, with a pure medium-yellow trumpet which is left in bold relief by the broad pointed star formed by the flat opening outer petals, an inch and a half wide; medium early, but one of the longest lasting of all daffodils either in the garden or after being cut. Each, 20c; doz., \$1.80; 100, \$12.50.

Fine for bedding or for making bold clumps in the flower border. Each, 20c; doz., \$2.00; 100, \$15.00.

Barrii

Their pedigree is similar to the Incomparabilis type, but they inherit more of the Poeticus character in having the cups less than one-third of the length of the perianth segments (petals) and more of the red parent blood suffused through the cup.

Lovenest, one of the new "pink" daffodils, which represent a remarkable accomplishment by plant breeders, and the first important extension of the daffodil color range, is made available this year for gardens. The trumpet of saffron yellow is suffused with apricot pink, giving a distinct pink tone to the flower, making a beautiful color blend entirely new to the daffodil race. This variety is one of the daintiest of all trumpets, medium in height, with a starry perianth of informal type. Very early. A flower which will be the talk of your garden circle. The Hardy Lilies

LILIUM Auratum

LILIUM Regale

LILIUM Canadense

LILIUM Rubrum

Many imported lily bulbs arrive in this country very late in the fall. Note carefully the arrival dates stated below. If freezing threatens before your bulbs arrive, cover the soil with a heavy mulch to keep it soft.

LILIES are so beautiful, so fragrant, we are likely to think them too fine for the amateur to grow. But many are hardy, thrifty flowers, capable of surviving conditions which would overcome flowers much less beautiful. Grow them in the border in small groups, with background, where their beauty has a suitable setting for its display. They blossom, as a rule, in midsummer, when fine flowers are at a premium.

They are nodding, with reflexed, waxy, glistening petals, rounded at the tips, and of a creamy peach color popularly known as Nankeen yellow. Miscellaneous Bulbs

The very first flowers of spring are the minor bulbs, snowdrops, scillas, chionodoxas, crocuses, which come before narcissi. On these pages will be found many other interesting garden treasures, including those fine subjects for rock gardens, erythroniums, brodiaeas and camassias.

Allium

Very attractive little bulbous plants, somewhat resembling the Brodiaea, but with a closer head of flowers. Perfectly hardy, easily grown, and well adapted to rock gardens or to plant with other small bulbs. Thrive in almost any soil in sunny situations. Plant bulbs two inches and cover with leaves the first season.

Eastern Lake. It is one of the prettiest. 4 to 6 inches high, with pink flowers tinted lavender. Doz., 75c; 100, \$5.00; 1,000, \$45.00.

Unifolium. 6 to 10 inches high, with a handsome umbel of rosy-pink flowers. Doz., 75c; 100, \$5.00; 1,000, \$45.00.

Amaryllis Hallii

(*Lycoris Squamigera*) For Outdoor Planting

Produces in early spring attractive green foliage which grows until July when it ripens off and disappears, and one not familiar with its habits would think the bulb had died, but about a month later, as if by magic, the flower stalks spring from the ground to a height of two or three feet, developing an umbel of large and beautiful lily-shaped flowers three to four inches across and from eight to twelve in number, of a delicate lilac-pink shaded with clear blue.

Culture—As the bulb is perfectly hardy without any protection it can be planted either in the fall or spring, but we consider fall the best time as the bulbs will have a chance to get established before flowering time. Cover the crown about four inches. Very useful for the border or among shrubbery. Each, 50c; Doz., \$5.00.

Anemone (Windflower)

They succeed best in light, rich, well-drained loam. Plant in November, or as soon as the ground can be worked in the spring. If planted in the autumn they should be covered with leaves, straw or long manure on the approach of winter.

Brodiaeas

Coccinea, The Floral Firecracker, has stems rising to 2 feet, while the flowers are a vivid crimson tipped with pea-green. The resemblance to a bunch of firecrackers catches the eye at once. A group of these bulbs in a mass of ferns or light-foliaged plants is striking, and they do very well potted. They prefer a loose soil, and preferably gritty. Each, 15c; doz., \$1.50; 100, \$10.00.

Calochortus

True Mariposa, or Butterfly Tulips

Cup-shaped flowers, one to many on a stem, marked with eyes and dots and pencillings in rich colors, yet each strain carrying out the plan on a color scheme of its own. "Mariposa" is the Spanish word for butterfly.

Scarcely two are alike; they may vary through white, lilac to purple and again through shades of pink to deep claret-red. They thrive best in porous soil, sandy or gritty, either in sun or light shade. Flowers are 2 to 4 inches in diameter.

Venustus Citrinus. A most satisfactory hardy species with deep rich yellow flowers with a black eye. Most excellent.

Flower Seeds for Fall Sowing

FEW know many of our prettiest and best known annuals may be sown in the fall, in fact some varieties, like the annual Larkspur, are much better, treated in this way. The principle is the one Nature uses. Seed dropped from parent plant will lay dormant in the soil until early in the spring when it germinates and begins a root system long before one can get in the ground to sow seed. Consequently the flowering season is prolonged by the earlier blooming. Ground should be prepared and seed sown just previous to the late heavy frosts. The fall-sown plants as a rule are much sturdier and better established on the blossoming date than those started indoors. Another advantage of fall sowing is that it relieves pressure in the springtime. Care should be taken not to sow too early, as the seed will germinate and die in the fall. Early November is the best time, except for Pansies and Violas, which should be sown in September.

Sweet peas should be heavily mulched with leaves or straw.

Perennials for Fall Planting

HARDY perennials may be set out this fall in time to become well established before winter sets in; and next year will see them better developed, and bearing finer flowers than can be obtained from plants set in your border next spring.

This advantage is accompanied with very little extra risk. We do not list the kinds which need special protection through the winter. It is always well to apply a mulch over newly planted perennials, after the ground has frozen. This will tend to prevent winter

thaws and frost heaving. Plants should not be placed where water stands, as excessive dampness in the winter causes rot.

All plants are F. O. B., Chicago.

Plants are shipped with their roots well wrapped; and as packages must go by parcel post or express, it is impossible to make prices which cover postage, and are fair alike to all customers. So all prices in our plant list are F. O. B. Chicago, and if it is desired to have them sent by mail, postage should be added at zone rates. If sent by express, they go collect, at customer's expense.

Testimonial

La Grange, Ill., May 19, 1933.—Last fall I purchased some 40 or 50 dormant rose bushes from you which I planted about the 10th of November. Today, every one of the bushes are well on their way, as a matter of fact more than half of them already carry buds and will be in bloom in another couple of weeks. I am absolutely going on record that the time to plant roses is in the fall—at least in this locality.—C. H. C.

Vaughan's Peonies

PEAONIES, especially the modern introductions, are probably the most valuable, and most beloved of all perennial plants. Planted in sun or semi-shade in single clumps or long beds; or bordering lawns, shrub rows, and carriage drives, they give a grand display of large fragrant blossoms of brilliant colors during June, followed by their exquisite foliage which is very ornamental during summer months. They are also most effective for home and table decorations, and last longer in water than many other perennials. Avoid buying cheap Peonies; they require just as much care as the better kinds, and are disappointing in the end.

Planting. Peonies may be planted from September first until May. Orders should be sent in at once so that we can forward when weather permits. Avoid planting too deeply, as this is often the cause of shy blooming, 2 or 3 inches of soil over the crown (eyes) being sufficient. We offer Divided roots, (D) natural divisions, having 3 to 5 eyes of blooming size.

The figures preceding the varieties are the rating given to them by the American Peony Society, based on a scale giving 10 points for perfection.

Peonies in the Little Garden. By Mrs. Edward Harding. This is a delightfully written book which epitomizes the experience of years, and provides entertainment, instruction and inspiration for the peony admirer. Postpaid, \$1.80.

Helpful Details Making Mail Orders Convenient

Order at Once Send in your order as soon as possible after receiving catalog. Bulbs for immediate planting will be sent at once, others at proper time, with due notification.

How to Order Use the order sheet accompanying this catalog. One section is for seeds, bulbs and sundries (i. e. Insecticides, Manures, Poultry Supplies, etc.); the other for plants, shrubs and trees only.

Don't put plants and trees on the same section with bulbs and seeds.

Important Write your name, postoffice, state and express office plainly with black ink, on every order, and every time you write to us give plain express, mail or freight directions; where none are given, we route the same at buyers' risk.

Quantity, Size, Price Always give the quantity required of bulbs, plants or trees, mentioning size where different sizes are offered, and carry out the price of each item.

Mistakes These will happen in spite of all care. Write us at once with copy of original order if possible, and mistakes will be promptly rectified. Please do not return goods until you hear from us.

Parcel Post Fourth Class Mail Matter, which includes seeds, plants, bulbs, roots, books, tools, insecticides (in dry and paste form), odorless fertilizers and requisites, may be forwarded by domestic parcel post within the United States. See table opposite showing postage you should add to insure free delivery. All poisonous Insecticides, are unavailable.

Express Service For most orders exceeding 20 pounds in weight and for plants requiring special packing, we urge they be expressed. Mark order plainly if wanted by Express or Parcel Post.

Our Terms with customers not having an account are strictly cash with order. We make no C. O. D. shipments unless one-third of amount is paid in cash with order. No trees, plants or other perishable stock, are sent C. O. D.

How to Send Money Send by New York or Chicago draft, registered letters, or postoffice or express money order; both are cheap and absolutely safe. Small postage stamps are taken as cash, but we prefer larger denominations, such as fives, tens or fifteens. Registered letters can be sent from any postoffice, and your receipt sent you by return mail if demanded. If personal checks are used have them certified and add 15 cents for exchange cost. Put no currency in letter unless you register the same. Make money order payable to "Vaughan's Seed Store."

PARCEL POST Vaughan's Seed Store at Chicago and New York, covers the United States in a remarkable way to secure cheap postal rates for its many mail order customers.

The weights of all bulbs and roots offered are given and customers are requested to add sufficient to their remittance to cover postage on total estimated weight of order at rates given in the following table.

Our Responsibility It is so manifestly impossible for a seller of any perishable article to be responsible for what may happen to it after it leaves his hands, especially one like seeds, which are planted in the ground under varying conditions of soil and climate, that we, in common with all American seed houses, disclaim responsibility as to the crop which may be raised from seeds which we sell.

At the same time, in case of any failure to secure proper results caused from some inherent fault in the seeds themselves, Vaughan's Seed Store accepts responsibility, not for crop, but to the extent of the amount of money paid for the seeds, if immediately advised. Or seeds may be returned.

We Do Not Warrant in any way, expressed or implied, the contents or the description, quality, productiveness or any other matter of any seeds, bulbs, plants, shrubs or trees sold by us, and we will not be in any way responsible for the crop. If the purchaser does not accept these goods on above terms, no sale is made thereof, and he must return them at once and money will be refunded. Subject to the above conditions, we make this sale at the moderate prices at which we sell our goods.
