GRAPE VINES.

IVES SEEDLING. (Ives Madeira, Kittredge.) This variety, after twenty-five years' trial, is the only one, which has succeeded wherever it has been planted, and it is now raised in about twenty States of the Union. From Michigan to Alabama, from Nebraska to Massachusetts, it has given as great satisfaction as here in Southern Ohio—and the award of the Longworth Wine House Premium, for the best Grape for our whole country, was justly awarded to the "*Ives Seedling*", as no other variety does equally well everywhere. Some Vineyards, in this county, five to seven years old, have yielded this season from 800 to 860 gallons of wine per acre. We need say no more, and recommend it for Vineyard Planting as the most reliable grape thus far known.

For description of other varieties, see Descriptive List No. 6.
