each 10c per foot. (A five foot tree 50c, etc.)

SHADES—Wild Persimmons, Pecan, Locust, Umbrella China, Catalpa, California Privet for hedges 8c each.

Sweet Potato Plants, \$1.00 per hundred, \$7.50 per thousand, prepaid.
Cabbage and Tomato Plants, 50c per 100 or \$4.00 per 1000, prepaid.

Plant Pecan Trees. You may think they are mighty slow to pay but they are not. Last season I sold a man 112 four to five foot trees for \$280.00. 107 of these trees are now alive and growing nicely. He told me not long ago he would not take \$600.00 for them. Thus according to his own figures his money has earned more than 100 per cent in twelve months. You cannot plant anything that will be more certain of returns. In five years this man's trees will be worth \$100 each. They bear quick.

Plant Carmen Grapes. The grape is coming into its own. Everybody likes them. Everybody buys them. The Carmen will average bearing one bushel of grapes to the vine. We plant 300 or more vines to the acre, and the grapes sell at from five to ten cents per pound. An acre of Carmen grapes will produce 15,000 pounds. They like good deep sand best, but will do well most anywhere. They are a sure crop.

Plant Blackberries. The demand will never be supplied for good berries. Consumption is far ahead of production. An acre of Early Wonder and McDonald berries well cared for will pay the owner \$1,000 per year. Plant a berry patch and a few pecans along the row. Don't worry, too many people have moved to town, you can sell them at a price higher than you ever thought of before.

American Honey Persimmon. Several years ago a man in Illinois sent me some seed of what he said was the finest wild persimmon in the world. These are large, very sweet, stand drouth, and make a fine fast growing tree. The persimmons are liked by pigs, chickens and to tell the truth you will always have a hankering to visit these trees. They begin to get ripe in September and continue all the fall. I have no trees to offer but will send a packet of fifty seed for fifty

cents. Plant them around the house or in the orchard. The persimmons are so much better than the old wild persimmon that you can sell them readily on the market when people taste them. One tree will not bear plantd alone. Plant the seed in the winter or early spring about as deep as you would corn. They are sure to grow. Can grow far north.

Again I want to tell you about my Eureka Persimmons. They are now beginning to get ripe, September 25. Great big golden fruits. Fit for a king. They get better every year. The market seems inexhaustable for them. I claimed several years ago they would beat oranges. I feel sure now if you could see my orchard and watch how people take up with them you would agree with me. Cotton is not always dependable. Plant a persimmon orchard and a few pecan trees. They will certainly help you over the hard places. An orchard of Eureka Persimmons is worth \$1,000 per acre. It will pay you to investigate them as a money crop. If you do not have one of my regular catalogs, write for one.

Fig Plants. For several years I have been sending my quick bearing fig plants to the North. Some of them are now growing on Long Island and fruiting abundantly. They can be grown in tubs, in window or green house, and make a very beautiful house plant, besides bearing abundantly of figs. These figs are delicious with sugar and cream or eaten alone. They can be planted in a garden and the plants covered over with trash or dirt through the winter. They will have ripe figs by the last yof July and continue all the fall. You will be delighted with them. We will mail the plants for ten cents extra on a plant.

All berry plants half price.
