THE UNIVERSITY OF CHICAGO

INTRODUCTORY REMARKS.

In offering the following Catalogue to the public, a few introductory remarks may not be improper. The proprietor, passionately fond of the cultivation of trees, shrubs and plants, has spent the prime of life in examining, collecting and re-producing these for the gratification and comfort of himself, family, friends, and the public in general. After a period of thirty years thus spent, he has the pleasure of seeing himself surrounded with a great variety of fruits and flowers. And he would assure the public, that neither pains nor expense have been withheld, in procuring and propagating such as were thought the most deserving, as to earliness, flavor, size, or durability. The cutting of scions, budding, grafting and marking has been mostly done by his own hands, and never otherwise than under his personal inspection. In the introduction of new varieties, he has been careful to receive them only from sources where the greatest reliance could be placed; and when so obtained, every precaution has been taken to preserve the different kinds distinct, and some of the same introduced into his sample grounds, to be judged by their fruits, being fully satisfied that newness in fruits is one thing, and real merit another, and the latter by far the most important.

Every tree, shrub or plant sent from these nurseries, gardens and green houses will be duly labeled by the proprietor, who claims to be a practical nurseryman, giving his whole attention to the business, but does not claim to be infallible, yet trusts that with the care used, and an earnest desire that all should be correct, mistakes will be rare; and should any occur, he will be ready at all times to make ample amends.

The very liberal patronage for many years, so generously bestowed on his establishment, has induced to renewed exertions, and to the enlargement of the operations of every part of the establishment; and the proprietor can assure his friends and the public at large, that nothing shall be wanting to render it worthy of increased patronage.

The great difficulty attending the collection of distant debts, renders it necessary, that orders not sent through an Agent of the establishment, should be accompanied by the cash, or draft, or reference to some responsible person in Cleveland or vicinity, for the payment of the bill.

Catalogues sent gratis to all applicants, if by mail, post paid. Letters requiring information, promptly replied to.

Trees and plants can be removed with safety, after about the 10th or 15th of October; but in case of severe frosts, may be removed a week or ten days earlier. In the spring, the proper time for transplanting is as soon as the frost is out of the ground, and until some time in the month of May, which will vary, as the season is early or late. For bulbous flower roots, the best time is from July to November, inclusive. Green house plants can be forwarded at any time, except in freezing weather.

Orders for Trees, &c.

Persons ordering trees, &c. are requested to be particular in stating the route they wish them to take; and when they are to be transported a great distance, they will please state the distances of land and water carriage, and they will be packed accordingly.

I would remark, that most of the trees in these nurseries have been propagated from bearing trees, and in such proportions as their excellence might seem to warrant; however, it sometimes happens, that a particular kind of fruit is much more called for than was anticipated, and for the time none are left but trees of small size. In such cases, in order to avoid disappointment, the proprietor would suggest, that when trees of large size may be required, or where the person may not be well acquainted with the most choice kinds, that the selection, in part, may be left to the proprietor. This will enable him to select better sized trees, and often those of superior excellence.

Trees to be forwarded by water, will be delivered on the wharf, or on board of any steamboat or vessel at Cleveland, without any additional charge, and when so delivered, it is expressly to be understood, that they are wholly at the risk of the person ordering them.

Great care is taken in packing trees for transportation. The roots in all cases are well puddled and packed in moss, and then securely wrapped in straw and bass matting, or packed in boxes, for which a reasonable charge will be made; and no other, in any case, however inexperienced the purchaser may be. Thus packed, they have not unfrequently arrived at their destination, 500 or a 1000 miles distant, nearly as fresh as when taken from the nursery.

NOTE.—The proper names of fruits are printed in Roman letters, and other names by which the same are known are in italics.

WM. W. CUSTEAD.

APPLES—PYRUS MALUS.

PRICE 20 CENTS EACH—\$18 PER 100.

EXPLANATION OF THE ABBREVIATIONS AND TERMS.

PREVAILING COLOR.—b. brownish; d. dark; g. green; o. orange; p. pale; r. red; rus. russet; str. striped or streaked; y. yellow.

FORM.—Conical, smaller at the blossom end; oblate, somewhat flattened; ovate, egg-shaped; cal. calville shaped, having projecting ribs.

SIZE.—L. large; M. medium; S. small.

QUALITY.—J. Juicy; V. very; P. productive.

Name.	Color.	Form.	Size.	Season when at maturity.	Remarks.

REMARKS.—Perhaps no part of the globe is more congenial to the Apple than that of the United States. Indeed, so adapted is our climate that it will succeed in almost every variety of soil. A rich loamy soil, however, is the best. As the roots spread wide near the surface of the ground, therefore it does not require as deep a soil as some other kinds of fruit. A *very wet* soil however should be avoided; and on an extremely dry, gravelly soil, the trees will not be as productive, neither will the fruit be as large and fair.

The proper distance for planting the Apple is from 25 to 40 feet apart, according as the soil is more or less rich. The richer the soil, the greater the distance will be required to make room for the luxuriant growth of the expanding branches. (See remarks on Transplanting.)

The soil of the Apple Orchard should be kept well cultivated for several years; and if occasionally stocked down to grass, should not be suffered to remain so more than one or two years at a time.

An orchard kept well manured, and under a high state of cultivation, will produce double the quantity of fruit, and grow twice as fast as where an opposite course is pursued.

PEARS—PYRUS COMMUNIS.

PRICE 50 CENTS EACH.

EXPLANATION OF ABBREVIATIONS.

COLOR.—b. brown; c. crimson; d. dark; g. green; p. pale; o. orange; r. red; rus. russet; y. yellow.

FORM.—pyr. pyriform; pyramidal, or pear shaped; obt. obtuse, blunt pearshaped; obl. oblate, somewhat flattened; oblg. oblong; obo. obovate, egg-shaped, the bottom or blossom end the largest; turb. turbinate, the figure of a top inverted.

SIZE.—L. large; V. L. very large; M. medium; S. small.

SEASON.—The initials of the months are used; A. for April; Aug. for August; M. for March; Ma. for May; J. for January.

REMARKS.—P. productive; V. very; J. July; B. baking, C. Cooking.

REMARKS.—The Pear tree should be planted from twenty to thirty feet apart, and like the Apple will succeed on almost any soil. The roots strike deep into the earth, and consequently this tree rarely suffers from drouth. A very damp soil, especially where the sub-soil is very wet and spongy, should be avoided, as on such soil the fruit would be inferior.

A disease called the FIRE BLIGHT, has destroyed the Pear. In this place it is of rare occurrence. The disease is probably caused by the attacks of a minute insect, on the inner layer of the bark. Their depredations soon cause the leaves and limbs to wither as though scorched by fire. The only remedy is to cut off all the diseased branches.

The cultivation of the Pear has been too much neglected in this country. No other kind of fruit yields more bountifully, and the more choice kinds always command a high price in market. The Pear tree frequently attains a great age, many survive one hundred or more years; and the quantity of fruit gathered from a single tree, is often enormous.

PLUMS—PRUNUS DOMESTICA.

PRICE 50 CENTS EACH.

REMARKS.—The soil best adapted to the growth of the Plum Tree, is a deep rich loam, inclining to clay. A very dry, sandy or gravelly soil, is to be avoided, unless a portion of clayey loam is to be incorporated with it. The proper distance for planting this tree is from fifteen to twenty feet apart.

The Curculio is the great enemy of the plum, and not unfrequently the whole crop is destroyed by its depredations. This insect deposits its eggs in the fruit when it is quite young, after some time the fruit falls, and the grub or worm enters the ground, from which it returns the following spring season in the shape of a winged insect, and again deposits its eggs in the fruit. The best, I had almost said the only remedy, is, to destroy the grub in the Plum as soon as it falls from the tree. This may be done by daily picking up and feeding to the hogs all the falling fruit. It is highly recommended to have the Plum Orchard—and I would also include the Apricott and Nectarine—so arranged as to permit swine to run in among the trees. This in a short time, will rid the premises of this troublesome insect.

CHERRIES—PRUNUS CERASUS.

PRICE 37 1-2 TO 50 CENTS EACH.

REMARKS.—The proper distance for planting Cherry Tree is from 16 to 25 feet apart. The tree is quite hardy, and flourishes throughout nearly every part of our country. A rich sandy, loamy, or gravelly soil, rather elevated, is the best. But they will thrive, in almost any soil, not absolutely wet.

Many varieties of the cherry are truly ornamental, growing up in a beautiful pyramidal form. They are also of quick growth, soon come in bearing, and are very productive. The Cherry tree, requires but little pruning, merely cutting away the limbs crossing each other. Many very choice and valuable varieties have been brought to notice within the last ten or fifteen years. And an increased attention has also been given to their cultivation; not only as an article of luxury for the family, but also for the market, where the most choice kinds always command a high price.

PEACHES—AMYGDALUS PERSICA.

PRICE 20 CENTS EACH—\$18 PER HUNDRED.

REMARKS.—The proper distance for planting the Peach Tree, is from 16 to 20 feet apart. The peach rarely succeeds well, when planted on a cold wet soil. A warm gravelly or loamy soil is the best adapted to their growth. The soil should at all times be kept under cultivation. Young trees especially, will not thrive when planted on grass land. The Peach tree should receive an annual pruning, by cutting off one or two feet of the long and straggling branches, which frequently disfigure the appearance of the tree, and render it less productive. The pruning should be performed in the months of June or July.

APRICOTS—PRUNUS ARMENIACA.

PRICE 37 1-2 CENTS EACH.

Arrangement and Abbreviations the same as those of Peaches.

Name.	Color.	Form.	Size.	Season.	Remarks.
Black	p	round	M	Aug	Hardy, vigorous
Breda	o r	roundish	L	Aug	V P Superior flavor, tree healthy and strong
Brussels					
De Hollande

De Nancy					
Peach Apricot	o r	roundish	L	m Aug	One of the best sorts, rich, and superior flavor
Anson's Imperial					
Turkey	d y	round	M	e Aug	Fine rich flavor
Large Turkey					

REMARKS.—The remarks on the cultivation of the Peach (see page 15) will apply with equal force to the Apricot. It is also, on account of its smooth skin, extremely liable to the attacks of the Curculio.

For remedy, see remarks on the Plum, page 12.

The Apricot is a very rich delicious fruit, and will well repay a little extra trouble. They require, in a more northern latitude, a somewhat peculiar treatment. The tree is rather tender and liable to winter kill. They succeed best when planted by the side of a building or high fence, where they are little exposed to the action of cold bleak winds. This tree is often trained as an *Espalier*, and when trained on the side of a building or high fence, it is not only highly ornamental, but often very productive. The Apricot blossoms very early, and the young fruit is often liable to be destroyed by the late frosts of spring. To prevent this, let a quantity of straw, or any other litter, be placed around the trees towards spring. This will retard the season of blossoming until the danger shall have passed away.

NECTARINES—AMYGDALUS, NECTARINA.

PRICE 25 CENTS EACH.

N. B. See Remarks under head of Peaches; also, under head of Plums.

Arrangement and Abbreviations the same as those of Peaches.

Purple Frontignac	p	round	M	large	Superior, high musk flavor
White Constantia				comp	
White Muscat	w	oval	L	loose	First quality, delicious flavor
York Cluster	pur	round	M	comp	

REMARKS.—The Grape succeeds best when planted in a deep rich, warm soil, and in a situation sheltered from the cold bleak winds. The soil requires to be made rich. Horn shavings, bones, hoofs, and hair of cattle and hogs, cinders from the Blacksmith's forge, and many other substances, when buried in the soil, will not only keep the soil loose and friable, but by their gradual decomposition, will have a wonderful effect in producing great productivity. Blood of animals, frequently applied to the soil near the plants, will have a tendency to make the vines vigorous and healthy. Grape vines, in cities and villages, when trained against a high fence or wall, with a sunny exposure, often become very productive.

All of the foreign varieties require protection in winter. Late in autumn let the vines be taken from the trellis, and laid down on the ground; cover them a few inches deep, either with earth or with some kind of litter; uncover

again early in the spring. The Grape, unlike most other kinds of fruit, produce their fruit from the new wood of the same year. They therefore require an annual pruning, cutting away the wood of the past year to within two or three buds of each branch. This pruning should be performed late in autumn or early in winter, at any rate before the sap rises in the spring.

QUINCES—CYDONIA.

PRICE 25 CENTS EACH, EXCEPT WHERE NOTED.

Large Orange	Large, roundish, fine yellow color, productive, and fine
Portugal	Large, roundish, pyramidal, excellent, superior
Pear-shaped	Large, oblong, handsome, productive
Japan Scarlet, 50 cts. each	Fruit of little value, flowers large and of a most brilliant scarlet color, very ornamental and hardy
<i>Pyrus Japonica</i>	

REMARKS.—The Quince requires a deep rich soil, rather moist than otherwise, and it is quite important to plant them in a sheltered situation. They often produce very large crops when planted near brooks or water courses. Plant from eight to ten feet apart. Little pruning is required, more than cutting out the limbs crossing each other. The suckers springing up from the roots, and sometimes from the stem of the tree, should be carefully removed.

As an article for preserves, the Quince stands pre-eminent. It always commands a high price, bears transportation well, and its cultivation is well worthy the attention of Farmers, Gardeners, and others.

GOOSEBERRIES—RIBES UVA-CRISPA.

PRICE 20 CENTS EACH; \$1 75 PER DOZEN.

The Gooseberry, in order to succeed well, requires a rich loamy soil, rather moist than otherwise. Should be planted about three feet apart, trained so as to resemble a small tree, with a clear straight stem, and an open well formed head; cutting out annually all the surplus limbs, those crossing each other, and frequently much of the old wood requires to be removed. Let the ground annually be well manured, and kept free from weeds, and an abundant crop may be expected.

It is quite needless, and even wrong, to conceal the fact that many of the most choice and valuable kinds of the English Gooseberries, or those imported from Europe, do not succeed well in this country. They are subject to mildew, which spoils the fruit; and although many of them may be used for cooking purposes, when the fruit is quite green, yet the fruit of most of them are totally destroyed before they arrive at maturity. From the many varieties of this fruit, which the proprietor has had under cultivation, he has retained only eight or ten sorts, and these the least subject to this disease. Among them are the Mammoth and the White Amber, both of which are very fine, and but rarely mildew.

Currants—RIBES.

This fruit succeeds well in almost any soil or situation. Yet, in order to produce large, fine fruit, the ground should be kept rather rich, the bush trained in a single stem, the sprouts that shoot out below the head carefully pruned off, the branches thinned out, and the limbs sometimes shortened.

b. black; p. pale; r. red; w. white.

Black English	Very productive fruit of large size, highly valuable for its medicinal qualities
Black Naples	b. Very large, fine for preserves; 25 cents
Champaign	p. r. Transparent, fine; 25 cents
Dutch Red	Fruit large, productive and good; 12 1-2 cents each, \$1 per dozen, \$6 per 100
Dutch White	Vigorous in growth and very productive, berries and clusters very large, of a yellowish white
Missouri Black Fruited	Ornamental, flowers in great profusion; fruit black, flowers yellow and of extraordinary fragrance; 18 cents each, \$1 50 per dozen
<i>Lewis Fragrant</i>	
True White Dutch	W. Superior, large, white; 25 cents each
Wilmot's New Red	r. Large, much esteemed; 25 cents each

Strawberries—FRAGARIA VESCA.

PRICE, 25 CENTS PER DOZEN, AND \$1 PER 100, EXCEPT WHERE NOTED.

Chili	Conical; fruit large, very productive, superior
Downton	Ovate; very large, productive, aromatic flavor
<i>Knight's Seedling</i>	
Hovey's Seedling	Ovate; very large and early, very superior, none better; 50 cts per doz; \$2 50 per 100
Keen's Seedling	Roundish; very large, juicy, rich, high flavored
Methven Scarlet	Roundish; very large, productive, sweet, superior
Myatt's British Queen	Round, large; June, productive, of the largest size, greatly esteemed: 50 cts per doz
Ross's Phoenix	New; ovate, very large, productive, pine apple flavor, superior; 50 cents per dozen
Red Alpine Monthly	Conical; fruit small size, bears the whole season, from June till November
<i>French Monthly</i>	
Roseberry	Conical, medium size; Very productive, good flavor
Wilmot's Superb	Conical; large, excellent, rich flavor
White Alpine	Conical; medium size, continues long in bearing, fruit sweet and fine
<i>White Wood</i>	
Willey	Round, large; June, fine, productive and good

REMARKS.—The Strawberry is worthy of a place in every good fruit garden. It is not only extremely fragrant, and grateful to the taste, but it is highly conducive to health. A deep rich loam, rather inclining to clay, is the best, but they often succeed well even on a hard clayey soil or black muck. They require an airy situation, exposed to the sun. The soil should be made rich and deep. The roots often penetrate to the depth of fifteen or

twenty inches. Some have recommended planting out the beds in August, or early in September. Should the weather be rainy or lowery, they will succeed well, and do better than when planted at any other season of the year. But should the weather be dry and hot, as is usually the case at that season of the year, the planting then should be deferred until a later period in the autumn, or early in the spring. Indeed there is but little choice at which season they are planted. When planted late in autumn, the ground around the plants should be trod down hard, and some straw or other litter flung over them, before the setting in of winter. The plants should be set from twelve to fifteen inches apart each way. The largest fruit will be produced by keeping the most of the runners pruned off. If all are permitted to grow, very soon the whole ground will become densely covered, the fruit will be small, and the plants unproductive.

Probably it is best to destroy all of the runners the first year: the second year only leave enough to form new beds, and destroy the old beds when three years old: thus keeping a succession of beds from year to year in a bearing state. Others recommend to plant from 15 to 20 inches apart, destroy all the runners the first season, the second year leave the strongest runners, and in the autumn turn all the old plants under, and leave enough of the young plants to form a bed, thus occupying the same ground for many years.

Raspberries—RUBUS.

White Antwerp	Fruit pale yellow, large size, extraordinary productive, rich, pleasant flavor; 12 cents each; 75 cents per dozen
Yellow Antwerp	
Red Antwerp	Fruit fine red, large size; productive and rich; 12 1-2 cts each; 75 cts per dozen
Large Red Antwerp	
White Antwerp	This is frequently sold as the true White Antwerp: they differ in many respects, the wood and fruit is whiter than the true sort. The fruit sweet and good; 12 cents each; 75 cents per dozen
American Black	Fruit black, very sweet, rich and fine; 12 1-2 cents each; \$1 per dozen
American Red	Fruit red, productive, rich and sweet; 10 cents each; 50 cents per dozen
Red Franconia	Fruit red, large and fine; 75 cents per dozen
Monthly, or Everbearing	Large fine purple; bears abundantly from July until winter; 25 cents each; \$2 50 per dozen

REMARKS.—There are few fruits grown in the garden which are superior to the Raspberry, and perhaps none more conducive to health. As a desert fruit, it stands pre-eminent. A moist, rich soil, somewhat sheltered, perhaps is the best. But they will thrive on almost any good garden soil. A very dry, sandy soil, especially where the plants would be exposed to the scorching rays of a meridian sun, should be avoided. Plant in rows five feet asunder, and say three feet apart in the rows. The stalks of the Raspberry are biennial. After the fruit has been gathered, cut out all of the old wood, also thin out the new wood, leaving only five or six of the strongest stems to each stool, and the tops of these should be shortened.

Almond, Filberts, Hazelnut, Mulberries, Cranberry.

Almond, Hardshell	Amygdalus	25
Filberts, varieties	Corylus var.	25
American Hazelnut	Americana	25
Mulberry, American red or black	Morus rubra	25
do Chinese Paper	Broussonetia papegrifera	38
High or Tree Cranberry	Viburnum oxycoccus	25

Rheubarb, or Pie Plant—RHEUM UNDULATUM.

This is a hardy perennial plant, a native of Asia. The leaves are very broad, and two feet long. Their stalks are large, and these only are used. They are agreeably acid and vinous, very wholesome and much admired, whether stewed alone with sugar for tarts and puddings or pies, or combined with other fruits. Its use with us is fast increasing; and although its introduction to the London market did not take place, it is said, till 1815, yet now we are told, a thousand cart loads are there annually sold.—*Kenrick's New Amer. Orchardist*.

It is said that a delicious wine, nearly resembling Champagne, may be manufactured from the stalks of this plant. It also makes a superior jam or jelly. But for tarts, early in the spring, it is invaluable, coming as it does at a season or the year when there is nothing in the vegetable kingdom to supply its place.

Common Seedling Rhubarb	Grown from seed, 12 to 15 cents each, \$1 to \$2 per dozen
Wilmot early red	Early and fine, red stalks; 25 cents each, \$2 per dozen
Goliath, or Giant	Grows large, fine for the market; 25 cents each, \$2 per dozen
Myatt's Victoria	New, leaves and stalks of enormous size, exceeding all others, excellent flavor; 50 cents each

TO NURSERYMEN AND OTHERS.

The proprietor will endeavor to keep constantly on hand large quantities of Stocks and Young Trees of every description, suitable for commencing a Nursery ; and for the information of persons residing at a great distance, it may be proper to state, that Trees of small size, of the most choice and select varieties, may at all times be had much below the ordinary price. And to Nurserymen and others buying large quantities of Trees, of large or small size, a great reduction in price will be made. The location of these Nurseries, at a point where a large number of Steamboats, Vessels and Canal Boats are constantly leaving, will enable the proprietor to send forward articles with the greatest despatch.

Stocks, Scions, Asparagus Roots, etc.

Apple Stocks	\$5 to \$10 per thousand
Balsam Fir	12 25 per hundred
Scions of Grapes	4 8 "
do Osier Willows	4 "
Privet, or Prim, fine for hedges	10 "
do do Scions of	2 "
White Cedar, for hedges	10 20 "
Asparagus Roots, two years old	5 per thousand
do do do	62 cents per hundred

Scions for engrafting, either in large or small quantities, can be supplied. And the large number of standard Trees, now in bearing, will enable the proprietor to cut the most of them from bearing Trees. This will be of great importance to those who desire to see a show of fruit at an early day.

Scions of the Apple, 25 cents per dozen, each scion making three grafts ; twelve varieties for \$2 50 ; one hundred varieties, \$15.

Scions of the Pear, Apricot and Nectarine, 37 1-2 cents per dozen ; 12 varieties for \$3.

Scions of the Plum and Cherry, 50 cents per dozen ; 12 kinds, \$4.

Scions of many very choice articles of Fruits can now be supplied in large quantities, and at reduced prices from the above rates.

Beautiful Flowering Trees, of the Fruit species.

PRICE 25 CENTS EACH.

Large Double Flowering Almond	Covered with fine double pink colored flowers in spring
Double Flowering Peach	Is also very beautiful
Chinese Apple Double Flowering	Is truly splendid ; the flowers are like roses of a delicate pink and white

Ornamental Trees.

The Ornamental Trees are divided into three classes. The first class comprises those which attain to a very large size, and ultimately become stately trees; the second class, those of medium size; and the third class are those of rather low stature. This classification will enable the purchaser to appropriately assort and arrange the Trees before planting.

By planting Ornamental Trees, Shrubs, and Creepers in clumps, the most beautiful permanent arbors may be formed, and which will give to the whole ground a very beautiful and picturesque appearance.

The prices hereunto annexed, are for trees of moderate or usual size. When Trees of a very large size may be required, an additional charge will be made.

Common Name.	Botanical Name.	Class.	Price each.
Maple, Silver Leaved	<i>Acer dasycarpum</i>	1	59
Horse Chestnut, yellow flowering	<i>Æsculus flava</i>	1	25
Ohio Buckeye	<i>pallida</i>	1	25
Alanthus, Chinese	<i>b Alanthus glandulosa</i>	1	20
Angelica, or Hercules Club	<i>c Aralea spinosa</i>	3	37
Paper Mulberry	<i>Broussonetia papyrafera</i>	2	25
Judas Tree, American	<i>d Cersis canadensis</i>	3	25
Catalpa, Showy flowers	<i>Catalpa Syringifolia</i>	2	25
Ash, White American	<i>Fraxinus Americana</i>	1	20
Acacia, Three Thorned or Honey Locust	<i>Gleditschia triacanthos</i>	1	25
Snowdrop, or Silver Bell	<i>Halesia tetraptem</i>	3	50
Tulip Tree, or White Wood	<i>Liriodendron tulipifera</i>	1	20
Magnolia, Blue flowering, or Cucumber Tree	<i>Magnolia acuminata</i>	1	25
Glaucous-leaved	<i>glauca</i>	3	38
Larch, American	<i>c Larix Americana</i>	1	37
European	<i>Europeana</i>	1	38
Plane Tree, or Button-wood	<i>Platanus occidentalis</i>	1	25
Abele, Silver leaved	<i>f Populus Alba</i>	1	37

a An ornamental tree of exalted merit, grows in beautiful form, leaves very large and numerous, forming a dense shade. Flowers in large clusters, white, spotted with red; truly beautiful. Trees of the largest size can be transplanted with perfect safety. This tree is widely different from the Ohio Buckeye.

b Singular in appearance, and grows astonishingly fast. Leaves from three to four feet long, somewhat tender, but succeeds well when planted in a sheltered situation.

c This tree presents a somewhat singular aspect. The limbs, and often the stem of the tree, is covered with stiff thorns. Flowers in large bunches, and last a long time.

d This tree blooms in great profusion very early in the spring, even before the appearance of the leaf; at that time it presents a beautiful appearance.

e This is a beautiful tree; grows very straight and erect, and ultimately becomes a stately tree. Beautiful when in bloom, and at all times emits a very sweet and agreeable odor.

f A tree of rapid growth and beautiful foliage, leaves a very dark green above, and very white or silver color beneath. It presents a beautiful appearance, especially when the leaves are gently moved by the wind.

Common Name.	Botanical Name.	Class.	Price each.
Poplar, Balsam	Populus balsamifera	1	\$0.25
Lombardy	dilatata	1	25
Red Siberian Crab Apple	Pyrus malus Sibirica	3	25
Chinese Double flowering do ^g	Linensis	3	38
Venetian Sumach, or Purple fringe	Rhus continus	3	25
Locust, Yellow	Robinia pseud-acacia	2	20
Glutinous, or Clammy-barked Acacia	viscosa	2	20
Willow, Golden	Salix vitellina	2	20
Ring or Hoop-leaved	annularis	2	25
Weeping	babylonica	2	25
Basket	forbyana	3	25
Mountain Ash, American	Sorbus Americana	2	38
European	aucuparia	2	38
Linden or Lime, American Bass-wood	Tillia Americana	1	37
European Broad leaved	Europea	1	38
Toothache Tree, or Thorny Ash	Zanthoxylum fraxineum	3	25
Golden Chain	Cytisus Laburnum	2	38

^g This tree grows upright, and is very ornamental when in bloom: the flowers are large, resembling small roses; very double and in clusters. Very much admired.

^h Blooms in much greater profusion than any other variety of the Locust.

ⁱ Presents a singular and beautiful appearance; the leaves are curled up like a ring or hoop.

^j A beautiful tree for planting in cemeteries, and other grounds. The branches pendulent and drooping, often falling down to near the ground.

^k Few ornamental trees are more highly valued than the Mountain Ash. The tree rises in a most beautiful pyramidal form, and the foliage, flowers and fruit, are all truly ornamental. In autumn and early winter its branches are covered with clusters of beautiful scarlet berries, which renders the tree strikingly beautiful. The European is rather the most beautiful variety, and is of more rapid growth.

Evergreen Trees and Shrubs.

Common Name.	Botanical Name.	Price each.
Tree Box, Myrtle-leaved	Buxus Myrtifolia	\$0.38
Dwarf Box, Common	suffruticosa, 50 cts per yd	12
White Cedar, or American Cypress	Cupressus theyodites	38
American Red Cedar	Juniperus suecica	37
Trailing Juniper	depressa	38
Evergreen Thorn or Burning Bush	Mespilus pyracantha	25
Balsam Fir, or Silver Fir	Pinus balsamea	50
White, or Silver Pine	strobis	50
Norway Spruce Fir	abies	50
Black or Double Spruce Fir	nigra	50
Hemlock or Drooping Spruce Fir	canadense	20

REMARKS.—Evergreen trees, when planted in clumps, or interspersed

among other trees, gives to the whole grounds a very cheerful and elegant appearance.

The WHITE CEDAR, when properly pruned, forms a very beautiful hedge. As an ornamental tree it also may be made very beautiful. By clipping off the ends of the limbs for a few years, the foliage will become very dense and the tree trained up in a beautiful pyramical form, presenting a truly unique appearance. The same remarks will apply to the RED CEDAR, and it makes even a more formidable hedge than the white.

The BALSAM, or SILVER FIR, is universally admired. There is no tree from the American forest more beautiful. It grows tall, and presents a very elegant and imposing appearance. It is well worthy of a place in every good collection. When grown from seed or from small plants taken from the woods, the foliage soon becomes dense and thick. The limbs should be left entire even from the ground; no pruning, more than cutting out dry limbs.

Ornamental Shrubs.

Purchasers by paying attention to the following classification, will be able to appropriately arrange the Ornamental Shrubs. The first class are those that attain to a large size, nearly as large as the third class of ornamental trees; the second are those of medium size; and the third are those of quite small growth.

Common Name.	Botanical Name.	Class.	Price each.
Horse Chestnut, Dwarf White	<i>Esculus macrostachya</i>	2	\$0.38
Indigo Shrub	<i>Amorpha fruticosa</i>	3	25

Mezereum, Pink Flowering	<i>Daphne mezereum</i>	3	25
Leather Wood	<i>Dirca palustris</i>	2	25
American Strawberry Tree, Spindle Tree or Burning Bush	<i>Euonymus Americanus</i>	1	25

a Very ornamental. Flowers in great profusion in clusters like small roses; very double and of a beautiful rose or pink color.

b This shrub is highly valued on account of its peculiar and powerful aromatic flavor. The flowers, leaves and wood, are all very fragrant.

c A beautiful shrub from Japan. Flowers profusely in the spring, and again during the summer or autumn. Flowers very double, globular, and of a bright yellow color.

d An elegant shrub, flowering in the greatest profusion, on the first opening of spring, and before the leaves appear. Flowers of a beautiful red or violet color; highly ornamental.

e Singular and unique in appearance; beautiful and very ornamental. In autumn and in winter, long after the leaves have disappeared, the branches

remain covered with beautiful red berries. The American variety is rather the most ornamental.

f This class of shrubs are very ornamental; and almost indispensable, in every good collection. They commence flowering some time in the month of July, and continue in bloom until late in autumn. Some of the varieties are somewhat tender, and should be planted in a sheltered situation.

g This shrub may be made very ornamental, by training it two or three feet high with a straight stem, and annually clipping off the long straggling branches from the top, so as to give it a beautiful round head. It also makes a beautiful hedge.

h The Syringas are all very desirable shrubs. Their beautiful white flowers, putting forth so early in the spring, and their sweet, agreeable fragrance, renders them favorites. The *S. gracillis vel hirsutus* is a rare plant; flowers quite as large as *S. grandiflorus*, of a beautiful white color, and extremely fragrant.

i A beautiful shrub of the largest size. Its rich purple flowers in large tufts, have a very singular, and beautiful appearance. The flowers and leaves are quite fragrant, having the odor of the citron.

English fly, straw colored	vulgare	25
Blue berried, yellow flowering	ceruleum	37
Pink azalea	Azelea nudiflora	37

This beautiful class of shrubs, (the upright Honeysuckles) appears to be but little known. Although they are called Honeysuckles, yet they grow in the form of a beautiful, well proportioned shrub, rising from five to ten feet in height. And whether in leaf, flower or fruit, are very ornamental, and universally admired. Leaves small and delicate, flowers fragrant, and in great profusion. In midsummer the bushes are covered with beautiful berries, red, white, &c., according to the variety.

Roses that Bloom in June.

The ROSE, the QUEEN OF FLOWERS, is universally and very justly admired by all. It always has, and probably always will command a prominent place in the flower garden. No class of plants perhaps, are more easy of culture, bloom more profusely, or make a richer display of their brilliant and varied colors than the Rose.

The Rose succeeds well on almost any soil, but a deep rich loam is the best. A portion of the old wood should annually be removed, in order to encourage the growth of new.

Name.	Description.	Price each.

Moss Roses—*Rosa centifolia*, var. *muscosa*.

The beautiful buds of the Moss Rose, render it worthy of a place in every collection. Some of the varieties are new and very superior, and all of them are perfectly hardy.

Name.	Description.	Price each.
Laffay's perpetual moss	White flowers in clusters, beautiful in bud, often flowers in the fall	1,50
Oscar Foulard	Rose violet, color beautiful, yet very rare	1,50
Crested or Crestata Moss, small sized plants 50 cents	Beautifully crested, very fine, superior	1,00
Red Moss, small size 50 cents	Rose colored, large and fine	1,50
Rouge du Luxemburg Moss	Very deep rich crimson, beautiful	1,00
Crimson Damask, or Tinwell Moss	Deep rose color, very mossy ly cupped	1,25
White Moss	Beautiful white, flowers in clus.	1,00

For Noisette, Chinese ever-blooming roses, &c., see Green-house Department, near the close of Catalogue. These roses are very beautiful when planted in the open ground. Many of them are quite hardy and will endure our winters with but little protection. A box or barrel placed over them, or covered with straw or litter, will so protect them, that they will come out fresh in the spring, and the rich display of their beautiful flowers during summer and autumn, will well repay for a little extra trouble.

Rosa Rubifolia, or the Prairie Rose.

Perfectly hardy; flowers in large clusters of various shades, from blush to deep rose. During the month of July, a period when few other Roses are in flower, the foliage is of a dark green, and large wood; strong and feeble, and for rapidity of growth has no equal in the Rose family. It is therefore admirably adapted to covering old buildings and other unsightly objects, concealing them with a beautiful flowery carpet of every shade.

Name.	Description.	Price each.
Baltimore Belle	Blush white, flowers in clusters	50
Beauty of, or Queen of Prairie	Rose colored, large and cup shaped, striped, strong grower, superb	75
Eleganse	Light pink, very showy and fine	37
Palida	White or pale blush, in large clusters, free bloomer	38

Remontantes, or Hybrid Perpetual Roses.

A new tribe originated within a few years between the perpetual and Bourbon Roses, possessing the beauty and fragrance of the former with the foliage; perfectly hardy, producing large and fragrant flowers in profusion from June until winter.

PRICE FROM 50 CENTS TO \$1.00.

Name.	Description.
Auberon	Profuse blooming, beautiful rosa carmine
Comte de Paris	Large rose purple, a most splendid bloomer
Lady Fordwick	Fine rosa, pink, profuse bloomer, and very fragrant
Madam Laffay	Rich rosa crimson, very fragrant, most splendid
Prince Albert	Rich crimson, globular, and very fragrant, in splendid large clusters.

Perpetual Damask Roses.

These were obtained by blending the Damask with the Ever Blooming varieties. The flowers are charming, and in most cases delightfully fragrant, and were not long since considered the ne-plus-ultra of the Rosery.

PRICE FROM 50 CENTS TO \$1.00.

Name.	Description.
Du Roi, or Lee's crimson, perpetual	Bright red, very perfect, a profuse bloomer, with the fragrance of the Damask Rose
Larine, or Queen of Perpetuals	Delicate pink, flowers in clusters, very fragrant, and a great favorite
Josephine Antoinette	Rosa Pink, free bloomer, and very fragrant
Portland	Large blush, nearly white, and very fragrant

Bourbon Roses.

A very popular family, of hardy habit, remarkable for their vigorous growth; Flowers of large size, and beautiful form, are produced in fine clusters, of every color, from nearly white to dark crimson purple, and blooming from May to November.

PRICE FROM 33 TO 75 CENTS.

Name.	Description.
Amilie Courtier	Fine rose color, very perfect and fragrant
Hermosa, or Armosa	Pale rose color, profuse bloomer
Henry Plantier	Deep rose color, profuse bloomer
La Burn or Monthly Cabbage	Strong grower, free flowerer
Marechal De Villars	Bright rosa purple, profuse bloomer
Queen of the Bourbons	Fine waxy, a blush, a great favorite
Bourbon	Deep rose color, flowers freely

Noisette Roses.

This superb class is distinguished for the profusion and perpetual succession of their flowers, produced in immense clusters.

PRICE FROM 50 CENTS TO \$1.00.

Name.	Description.
Aimee Vibert	Of dwarf habit, beautiful, pure white
Charles the Tenth	Rosa purple, fine
Choomatella or Cloth of Gold	Large double yellow, extra fine
Conqua De Venus	Cream white, pink centre, flowers in clusters, very fragrant
Cora L Barton	Rosy pink, strong grower, profuse bloomer, and fragrant
Felemburg	Pale rose, except in fall, when it is nearly scarlet, flowers in clusters
Jaune Desprez or De Arcle	Rosy Buff, strong grower, very fragrant
Lamarque	Creamy white, magnificent, flowers all the season
La Biche	Pale flesh color, changing to fine white
Julianne Le Sourd	Dark rose color, profuse bloomer in clusters
Le Pactole	Pale yellow, changing to nearly white
Lee	Blush, fine for covering up buildings
Orloff	Bright rose color, very superior
Ophire	Very fine yellow, abundant bloomer
Champney pink cluster	Pink, strong grower

Rosa Microphylla.

Very distinct from all other classes of the Rose; flowers large and splendid; foliage small, delicate and beautiful.

PRICE FROM 25 TO 50 CENTS.

Name.	Description.
Alba Odorata or double white	Very large, of a yellowish white, very fragrant
Carnea, or Rosea	Beautiful rose color, flowers large

Bengal Chinese, or Daily Rose.

This magnificent class is in universal favor. They commence expanding their beautiful flowers in March, and continue until arrested by frost. In green-houses or in warm climates, they bloom in the winter months. Most of them will do out with a slight protection.

PRICE FROM 25 TO 50 CENTS.

Name.	Description.
Agripina	Bright crimson, truly fine
Belle Isadora	Light crimson, abundant bloomer
Calvertia	Deep crimson, very fine
Celce	Fine blush white, closely resembles a large tea rose

Name.	Description.
Hamilton	Deep rose color, large and hardy
Rosa Indica	Light rose color
Indica Alba	Fine white, free bloomer
Sanguina	Fine crimson, profuse bloomer
Madam Desprez	Large dark crimson, very double
Queen of Lombardi	Beautiful rosy red, free bloomer, much admired; very hardy
Triumphant	Rosy Lilac, and often crimson

The Tea Rose—*Rosa Indica Odorata*.

Consisting of numerous varieties, all of which are desirable, and many of them truly magnificent; of luxurious growth, with flowers of every shade, from pure white to red; deservedly esteemed for their perpetual flowering, their varied beauties of color, size and form, and more especially for their peculiarly delightful and exquisite fragrance. They require some protection in winter.

PRICE FROM 25 TO 75 CENTS.

Name.	Description.
Aurore or Belle Aurore	Delicate straw color, changing to blush
Belle Amelia	Blush white, large, free bloomer
Bougre	Rosy lilac, extra large and hardy
Caroline	Bright pink, free bloomer
Clara Sylvain	Pure white, a great favorite
Devoniensis	Creamy white, flowers large in clusters, fragrant
Flavescens, or Fragellote	Pale straw color, large and fine
Hymenice	Creamy white, free bloomer
La Sylphide	Rosy buff, abundant bloomer
Madam Desprez	Fine and pure white
Mellville	Dark blush, abundant bloomer
Odorata	Rosy blush, delightfully fragrant
Strombio	Blush white, profuse bloomer
Triumph of Luxemburg	Rosy buff, sometimes yellowish white, splendid

Red Tea or Crimson Tea	Light crimson, very fragrant, flowers freely
White Tea	Pure white, abundant bloomer
Victorea Modesta	Fine blush; cupped, large and good
Princess Marie	Light blush, superb

Verbenas:

Several very choice varieties. Price 12 to 25 cents each.

The Verbenas are all very beautiful and desirable plants; and although comparatively of but recent introduction, they are now rapidly coming into notice, and of late many very choice and beautiful varieties have been produced. When planted out in clumps, in mounds, or on the border, they present a very beautiful appearance, and continue in bloom during the season, from spring till checked by the frosts of autumn. They are all tender, and require protection from frost.

Name.	Description.
Bersilla Tuberosa, or Madeira Vine,	Fragrant flowers, roots tuberous, a beautiful plant of recent introduction.
tender, 10 cents	

Pæonias.

The Pæonies are among the most ornamental plants of the Garden. None are more easy of culture, none bloom more profusely, and few indeed make a greater or richer display of their brilliant colors. No good collection can be considered complete without these desirable plants. The scarcity, and the high price heretofore charged for the more choice varieties, has deterred many from purchasing. The large stock now on hand has induced the proprietor to put them at very low prices. The three first named are truly splendid, and are now put at 50 cents each, just one half the price charged two or three years ago. The whole collection are perfectly hardy, and endure our most severe winters without protection.

Name.	Description.	Price each.
Chinese Double crimson, with splendid flowers, very large and full double	Pæonia Humei	\$0 50
Chinese Double Rose, scented, deep crimson and very fragrant flowers	fragrans vel odorata	50
Chinese Double White; flowers very large and very fragrant, truly splendid, flowers profusely and long	whiteji	50

Double Dahlias.

Price from 18 to 25 cts. each. Very good kinds, \$2 per doz. Fine mixed, all double, \$1.25 per doz. Select and fine varieties, \$3 per doz.

The present collection consists of about fifty varieties of this truly splendid flower, embracing all the different colors, many of which are very beautiful. New and choice varieties will be added, from year to year. See separate Catalogue.

Miscellaneous Bulbous Roots and Plants.

Star of Bethlehem, 50 cents per dozen.

Tuberose, 10 cents each, \$1 00 per doz.

Gladiolus, or Sword Lily; several varieties, from 10 to 40 cents each.

Mexican Tiger flower; 25 cents each, \$2 50 per doz.

Calcium Autumnale, 25 cents each.

Jonquil's Double and Single, 12 cts.

Fritillaria, or Crown Imperial; Red and Yellow, 20 cts. each.

The Tuberose, and Mexican Tiger Flower (*Feraria Tygrida*) are both exceedingly beautiful and fine. They are both quite tender, and will not endure our severe winters. They should be taken up in the autumn and receive the same treatment as the Dahlia.

Picotees.

Several varieties which are exceedingly fine. Price from 25 to 50 cents each.

Chinese Chrysanthemus.

Many very fine varieties. Price 20 cents each.

Crocus.

Blue, purple, yellow, white and striped. Price 6 cents each.

Narcissus and Polyanthus Narcissus.

Of various colors, some very fine. 6 to 12 cents each.

Tulips.

Many choice and select varieties. Price, from 8 to 25 cents each: Mixed; 75 cents per dozen.

Hyacinths.

Many very fine varieties, both single and double. Price 12½ to 25 cents each. \$1.50 per dozen.

Iris, or Flower de Luce.

Many fine varieties. Price 12 cents each.

Primrose, Polyanthus and Auricula.

Of choice varieties. Price 12 to 25 cents each.

Medicinal and Culinary Plants.

A great variety of the kinds usually called for in this department, 12½ cents each.

Hardy, Herbaceous Perennial Flowering Plants.

Many of this class of plants are very ornamental, and well worthy of a place in the border. They present a very pleasing and picturesque appearance when planted in clumps, say three or more plants near together. The classification here given, will enable the purchaser to appropriately arrange them. The more dwarf varieties should be planted near the walk, the tallest growing ones outside.

Camellia Japonica.

Possessing elegance of form, beauty of foliage, pure and brilliant colors, large and elegant flowers, measuring in the different varieties from two to four, five and six inches, embracing every shade of color from a pure white to a rich dark crimson; and these, too, at the most dreary part of the season—January, February and March—when few other flowers are to be seen. As to the soil best adapted to their growth, there is considerable diversity of opinion. They will, however, do well in a mixture of old leaf mould and turfy loam—equal parts, with a little sand. Protect them from frost, fire-hat, and much sun in summer.

Out of the numerous varieties now cultivated, the following have been selected, and others will nearly be added; and the whole will be furnished on terms as favorable as those of any other establishment.

Name.	Description.
<i>Camellia Japonica alba</i>	Double white
amabile, Smith's	Rose and red
Americana	Bluish, spotted with rose
Beali	Superb cherry red
Anemone flora	Red Waratah
Chandlerii	Chandler's three colored
Colville	White Rose and red striped
Candidissima	Pure white, flowers large
Carolina	Superb mottled rose

Name.	Description.
Doncklearia	Splendid white and crimson
Eclipse	Striped Rose
Elegance	Rose with white centre
Estheria	Large white and rose stripes
Elphing stonia	Large red
Fimbriata	Fringed white
Fairlie	Rich crimson
Fordiæ	Beautiful light rose
Floyii	Rosy red
Gillisii	Fine crimson and white
Imbricata	Superb crimson striped
Hetrophylla	Fine red
Incarnata	Lady Hume's blush
Landrethia	Superb light rose, fine form
Martha Bursts	Large, perfect white
Myrtifolia	Red and shaded purple
Oraniensis	Fine, large light crimson
Reticulata	Very fine, large, rose colored
Spiciosa	Crimson and white
Single	Single white
Variegata	Double striped

GREEN HOUSE PLANTS.

The prices have been greatly reduced. They will thrive in a comfortable sitting room during winter.

Orders addressed to Wm. W. CUSTEAD, *Cleveland*, will receive prompt attention.

N. B. Where two prices are stated, the Plant can be supplied at either, or at any intermediate price.

* This denotes those that will support the winters of North Carolina.

Common Name.	Botanical Name.	Price each.
African blue lily	Agapanthus umbellatus	50
American century aloe	Agave americana	30

Chinese Chrysanthemums.

"This superb flower is deservedly esteemed, being perfectly hardy, and affording a most brilliant display at a period when the chilling blasts of autumn have left us but the vestiges of departed verdure."

PRICE 25 CENTS EACH.

Double Indian white, superb.	Golden yellow.
Golden lotus.	Lilac quilled.
Rose colored or pink	Small yellow
Spanish brown	Tasselled white
White quilled	Magnet, yellow, price 38c.

Brief Directions for Transplanting.

REFLECT that food is as necessary to the health and growth of Plants, as it is to the growth and health of Animals. The best for this purpose, is rich pulverized earth, or rather the vegetable matter it contains. That your Trees and Shrubs may live and thrive, dig for your Trees holes at least three feet in diameter, and eighteen inches deep ; and for Shrubs, holes of a proportionate size and depth, throwing away the lower spit of earth ;—then fill up the hole to a proper height for sitting the tree with rich surface earth or perfectly rotted manure ; blended with five parts of earth ; cut off any bruised or mangled parts of the roots, sit the tree, and fill in with fine earth between and around the roots, being careful that each is spread in an easy and natural position ; add more fine soil, shaking the tree gently, that every crevice may be filled. In late spring planting, it is of advantage to turn in a pail of water ; when the hole is nearly filled, allow a little time for it to settle, and then level off with the remainder of the earth and press it down with the foot, forming a slight basin, that the rain may run towards the tree, rather than from it.

Staking newly planted trees is of service, as it prevents them from being rocked about by the high winds ; and some pruning is proper if the tops are large, and this should be done after they begin to grow and not before.

A general assortment of GARDEN SEEDS and PLANTS in their season. Also, DRIED HERBS and FLOWER POTS.

REMARKS.

To our distant friends and patrons we would say :—View the present Catalogue as an imperfect outline of the CLEVELAND NURSERY, wherein many articles are omitted, and additions continually being made. Order whatever you would like to have, and if on hand or attainable they shall be sent.

The prices are now so much reduced that a few dollars will procure a host of them :
