CATALOGUE

OF

Fruit & Forest Trees, Flowering Shrubs & Plants,

FOR SALE BY

STEPHEN F. MILLS & Co.

AT

FLUSHING-LANDING, ON LONG-ISLAND,

NEAR

NEW-YORK.

APPLES, 37½ Cents. *Pyrus malus.*

Class, *Icosandria.* Order, *Pentagynia.*

[In the arrangement of the Apples, I have thought best to place those which are peculiarly adapted for Cider in a separate division—there is but little doubt, however, that many of those kinds now more particularly esteemed for the Table, may, on trial, prove extremely good for Cider also. Where such trials have already proved successful, it is designated. I have also designated those which have originated in America with an asterisk.]

TABLE FRUIT.

C denotes those which have proved good for Cider also.

P ——— those which are also proper for preserving or cooking.

* ——— native American fruits.

1 *YELLOW harvest, fit for tarts, and an excellent table fruit ripe in July.	9 Red calville, calville } rouge d'été } ripe in Aug.

GOOSEBERRIES. *Ribes Uva-crispa*.

Class, *Pentandria*. Order, *Monogynia*.

Different kinds by name, 31½ cts.

Do. do. mixed, 25 cts.

[Of this fruit several hundred varieties have been imported from England, where they excel in its cultivation, especially in Lancashire and Yorkshire; and where they frequently weigh from one to one and a quarter ounces. The following have been selected on account of their large size, flavour, or time of ripening; and many of them have, in turns, obtained the premiums at the annual exhibitions in England. But to have this fruit succeed well, attention must be paid to the directions attached to this catalogue.]

Red.

1 Alceek's king	5 British crown
2 Alexander	6 Dudley & Ward
3 Bank of England	7 Highwayman
4 Bang up	8 Huntsman

ROSES. *Rosa*.Class, *Icosandria*. Order, *Polygynia*.

[This favourite flower has been cultivated to such an extent in Europe that it combines almost every tint of which nature is susceptible, and some of their collections contain above 1400 superb varieties. The following have been selected on account of their fragrance, size, beauty, singularity, or delicacy, and the original plants of many of these kinds cost from \$1 60 cents to \$4 75 cents each, exclusive of the expenses and losses attending importation. The collection occupies an acre of ground, where all the kinds are marked with their respective names, and during the period of their bloom they present an accumulation of varied beauties scarcely to be rivalled, and those who may desire it can make their selections when in flower.—All the following Roses will endure the winters of any part of the Union without protection, except the *white musk*, which should be covered with some straw, &c. during winter.]

* denotes those that are 25 cents.

† ————— 37½ cents.

‡ ————— 50 cents.

¶ ————— 75 cents.

* So called in London, in honour of Miss Lawrence of that city, authoress of a splendid work on this delightful class of plants.

PEONIES. Class, *Polyandria*. Order, *Digynia*.

[No class of flowers has recently attracted more attention in Europe than this, a monograph of which has recently been published in London. Most of the varieties are extremely splendid, and others possess striking peculiarities. Anticipating that a similar taste would be evinced in this country, the proprietor has, by great exertion, obtained every variety yet known to exist.]

CHINESE CHRYSANTHEMUMS.

*Chrysanthemum indicum.*Class, *Syngenesia*. Order, *Superflua*.

50 cents, except those noted.

[This superb flower (vulgarly denominated *Artemesia*) is deservedly esteemed; being perfectly hardy, and affording a most brilliant display, at a time when the chilling blasts of autumn have left us but the vestiges of departed verdure. It is therefore a subject of much gratification, that the number known to be cultivated in China exceeds 50 varieties, nearly the whole of which will be offered to the public in the next catalogue.]

1 White quilled	5 Rose-coloured, or pink

IRIS, or *Fleur de Louis*. 25 Cents, except those noted,
Class, *Triandria*. Order, *Monogynia*.

[This flower, from its great combination of colours, (whence it derives its name,) and altogether unique appearance, has ever found admirers among the curious and the scientific. By the recent addition of a large division of the genus *Moræa*, the number of species has been increased to 70; to which may be added about 30 splendid varieties, which have been raised from seed by the Dutch. Arrangements have been made to import nearly all the other *hardy* species, which will be received in the autumn of the present year.]
