This slope will be planted with ground cover plants on a separate contract. The area will be in good shape for the future planting because it has been treated with a herbicide to prevent weed growth and it has to be covered with SOIL SAVER to prevent erosion. The plants will be placed through the jute mesh.

SOIL SAVER prevents erosion . . . anchors seed and soil in place

SOIL SAVER

SOIL SAVER gives immediate and continuous protection against wind or water erosion. It prevents loss of soil, seed or ground cover plants and loss from cost of repair labor.

SOIL SAVER, a heavy woven jute mesh, holds seed and soil intact on slopes, drainage ways and other areas of concentrated water flow, preventing erosion during heavy rainstorms. SOIL SAVER is a heavy woven mulch that stays put and can't be lifted by flowing water, wind or growing grass. Because of its mesh construction, the openings between strands give the grass plenty of growing room. There are 3000 "check dams" per yard which work to hold soil and seed in place while water flows over them. When grass is firmly established SOIL SAVER decomposes adding rich organic matter to the soil at the rate of two tons per acre.

Sell SOIL SAVER erosion control on your next slope job - insure customer satisfaction - avoid lost time.

SILVA-FIBER

An outstanding mulching material for soil stabilization and fast seed germination, to be used with hydraulic seeding equipment. SILVA-FIBER is mechanically processed natural wood fibers that, when hydraulically applied, intertwine to form a strong continuous mat relatively unaffected by rain or wind. It will adhere to ground irregularities, keeping seeds moist for faster germination. An economical mulch for large areas. Apply 1000 to 1400 pounds per acre.
