These are imported bulbs of a special home garden grade, all fine named varieties and of flowering size for outdoor planting, though not recommended for forcing, and smaller than the bulbs listed on other pages of this catalog. They were especially selected for this offer by our Dutch growers, who supply the highest quality bulbs for our florist and private estate trade.

Ten Each of Ten Varieties Embracing These Rainbow Colors, prepaid for \$2.75

Red Pink Rose Lilac Violet Scarlet Bronze Yellow Crimson Orange

Louis XIV, giant breeder tulip of purple and gold, is generally considered the finest of all late tulips, growing 40 inches high in favorable conditions, and having a huge flower. A few years ago we sold it for \$12 a dozen; and this year we offer bedding size bulbs at the lowest price we have ever quoted, doz., 50c; 100, \$3.50 prepaid.

Fantasy. A remarkable Parrot Tulip with a straight, strong stem, a quality which has always been lacking in Parrot tulips. This variety is a sport of the well-known Darwin tulip, Clara Butt, and has the same clear pink color as its parent, combined with artistic form of a Parrot tulip. Each petal is over three inches long, and two inches across. Five years ago this tulip sold at \$1.00 per bulb. Each, 20c; doz., \$2.00; per 100, \$15.00.

Before the narcissus embargo went into effect we imported a large quantity of bulbs, into which our Dutch growers who were reducing plantations, put named varieties of Large Trumpet, Leedsii, Barri and Poeticus types, making a mixture which cannot be compared with others. These bulbs have multiplied on our farms in Illinois, and are now offered for naturalizing at doz., 65c; 100, \$4.00; 1,000, \$35.00, by express.

These ten varieties offer no difficulties to the amateur: Regale, white; Canadense, yellow; Superbum, orange; Pardalium, yellow; Philadelphicum, orange; Elegans, red; Tenuifolium, coral; Tigrinum, single, orange; Tigrinum, double, orange; Umbellatum, orange. Bulbs for the Rock Garden

THE FINEST subjects for the rockery are found among the minor bulbs, which by very reason of their dwarf stature, and delicate blossoms, are likely to be outshone in the border by more conspicuous rivals. These more gorgeous subjects, the tall late tulips, and the giant daffodils, would never do in rock gardens; they would be out of scale, in size and character. But minor bulbs find among the rocks effective settings, where their most elusive beauties are made visible.

In planting bulbs in the rock gardens, there are no especial precautions to be taken. They like good drainage. Most of them need not be planted deeply; four times the diameter of the bulb is the general rule. Those that blossom early will look best against the background of a rock. They do not need protection from the cold, but will escape many dangers if they are shaded from spring sunshine which might bring them prematurely into growth. In shallow soil, a mulch which will protect them from the wash and spatter of March rains is advisable. They may be planted alongside other perennials, if one considers that their foliage must be left to turn yellow after they bloom, and places them where they will not interfere with treasured small plants which blossom soon after them.

First of the bulbous flowers to blossom in the rock garden are the white snowdrops and blue chionodoxas. They appear during the first warm spells of spring, sometimes weeks before other flowers. They are priced and their varieties described on Pages 18 and 19 of this catalog.

Scillas are excellent for rock gardens, with their vivid blue flowers and perfect hardiness, and tendency to multiply. *Scilla Sibirica*, and the species *Nutans alba*, both described on Page 19, are the types

Many are Suited in Size and Habit for a Place in the Rockery

golden blossoms of the winter aconite (*Eranthis Hyemalis*) resting on cushions of their green leaves. It prefers a moist spot, perhaps near the rockery pool. See Page 18.

When narcissi are blossoming in the border, species tulips will come

most suitable for rockeries.

Crocuses in small groups give vivid color in the early spring. Groups of yellow contrasting with masses of blue provide a pleasing color effect. On Page 18 will be found a selection of named varieties.

At about this time also appear the cushions of their green leaves. It prefers a moist spot, perhaps near the rockery pool. See Page 18.

When narcissi are blossoming in the border, species tulips will come into flower. These native forms differ from the cultivated tulip in their habit of growth, and height, but have flowers as large and colors even more brilliant.

Some have quaint form, such as *Comuta stenopetala*, whose twisted petals are illustrated on Page 14. The earliest of all is *Kaufmanniana*, a creamy flower with carmine edging. *Greigi Aurea*, brilliant orange scarlet, has interesting spotted leaves. A list of the species tulips is given on Page 14, and we do not know any of this race that will attract more interest and admiration in the spring garden. Give them a place in the sun, rather dry and hot.

The spring snowflake, (*Leucojum Vernum*, Page 19) is a good rock garden subject. The checkered lily (*Fritillaria Meleagris*, Page 18) with its quaintly colored, checkered bell flowers, is curious and interesting. The dog's tooth violets, (*Erythronium*) sometimes called trout lilies,

are much at home in soil pockets rich in leaf mould, in shady locations. (Page 18).

Muscari or grape hyacinths, blossoming in May, are effective with their blue spikes; they increase freely. (Page 19).

Brilliant Beds of Spring Bulbs Again in Fashion

Used as Garden Accents

THE fashion for flower beds has returned; but as usual there is a difference. Instead of dotting the front lawn or being placed in conspicuous spots near the house, the modern manner is to use beds of brilliant color as focal points in the garden picture.

In every garden there is some location in which a mass of glowing color, beginning in April and continuing through the season until frost arrives, will add stimulating interest to the scene. To produce this effect in the early garden, tulips and hyacinths are ideal. In such a bed, they can be followed with the bedding plants familiar to our mothers, or with the improved annuals of which there is a rich selection.

Color is the keynote of success in the new fashion. To serve its purpose, the focal bed must glow. Do not hesitate to use red and yellow for the spring effect; or any other combination which will symbolize for you the awakening of growth.

We list on this page special bedding combinations of tulips and hyacinths, together with information which will enable you to order bulbs for plantings of special sizes to fit your own design.

Many of our customers are frequently puzzled to know the proper depth and distance apart at which bulbs should be planted. The accompanying diagram, conveys the information much more clearly and briefly than we could describe it. The chart will bear careful study. Outdoor planting should be done early in the fall to secure healthy plants, vigorous foliage and beautiful flowers.

Sow Lawn Seed In Autumn for Best Results

*Prices for Quality Seed are
Much Reduced*

AUTUMN is the most favorable time to make new lawns and repair old ones. The sturdy growth of seedling plants is favored by the cool nights and usually plentiful supply of moisture. As the days grow shorter and the weather cooler, the growth of the plants changes, with more root growth and less top growth and a general thickening and strengthening of the plant. The earlier seed is sown after mid-August, the longer young plants will have in which to establish themselves before winter comes.

The greatest foe of fine lawns is timothy, a coarse hay, which is extensively used as an adulterant in lawn mixtures. Its seed, a farm commodity, is much cheaper than lawn grasses; and germinates more quickly. But its coarse stems rob fine grasses of needed food and inevitably ruin a lawn. Vaughan's lawn mixtures contain no timothy, but are composed of permanent, fine lawn grasses, blended according to formulas which have been proved best for their purposes.

See that the seed is well covered. Rake it into a new seed bed and roll so that soil is firmed over the seed bed. Where seed is sown on an old lawn, always top dress it.

Vaughan's "Parks" Lawn Seed The Standard Lawn Formula

This blend is composed of heavy, re-cleaned seed, blended according to the formula proved in our 55 years' experience to be the best for permanent lawns under American conditions and recommended by the Department of Agriculture. Re-cleaned Kentucky blue grass and red top form the bulk of this blend, to which is added white clover in the correct proportion. Our blend produces a lawn that will endure. Flowers You Can Grow Indoors

Lilies of the Valley

THESE beautiful, fragrant flowers may be brought to flower in 18 to 21 days, if pips from cold storage are used. They are easily forced in a bowl, if planted in sphagnum moss and kept well watered. Their dainty fragrance is preferred by many to the large Paper White Narcissi, and they are much quicker to flower. Do not order more than you intend to use at once as the cold storage pips will not keep. Plant about 25 pips in a 7-inch bowl, place in a warm temperature, 65 degrees Fahrenheit and shade from light until leaves and spikes are well developed, then admit light gradually. Increase temperature to 75 degrees or 80 degrees if possible. An inverted pot over each bowl answers admirably to shade them. They may be forced in soil the same way, in a 7-inch pot or pan. This is the treatment for cold storage pips only.

COLD STORAGE PIPS, ready November 1. 25 for \$2.00; 100 for \$6.00, postpaid.

SPHAGNUM MOSS, sufficient for 25 pips, 10c, postpaid.

Lilies on Your Table All Winter

One month covers the time from planting cold storage lily of the valley pips, through flowering, and fading. To keep your bowl filled through the winter we have arranged to book orders for divided shipments, a month apart. Cold storage pips must be planted promptly on receipt. We will send the first shipment at any date you wish (Nov. 25 will give you Christmas flowers) and will duplicate the shipment every 30 days thereafter, as long as you wish (until April 1). Minimum shipment is 25 pips, for \$2.00, prepaid to 300 miles. For two months' supply (25 each 30 days), send \$4.00; 3 months, \$6.00; 4 months, \$8.00; 5 months, \$10.00.

The Yellow Paper White (Grand Soleil D'Or)

A larger, stronger scented form of the Paper White Narcissus colored a beautiful golden yellow with a darker cup.

Mammoth bulbs. Each, 15c; per three, 40c; dozen, \$1.50; 100, \$10.00.

Paper White Narcissi to Grow in Pebbles and Water

THESE have been favorites for ages as a decoration for the living room during the coldest winter months when flowers are scarce. Their culture is simple, and with good strong bulbs such as we supply, flowering is sure. Plant bulbs in shallow bowls filled with pebbles, or fibre, and water. Keep in the dark until roots form (about 2 weeks) then bring into light. A day temperature of not over 70° is best. Three bulbs for 25c.

Fancy selected bulbs (13 ctm.). Three bulbs for 15c; doz., 50c; 100, \$3.00; 1,000, \$25.00.

Mammoth bulbs (14 ctm.). Three bulbs for 20c; dozen, 60c; 100, \$4.00; 1,000, \$35.00.

Jumbo bulbs (15 ctm.). Three bulbs for 25c; dozen, 75c; 100, \$5.00; 1,000, \$45.00.

Chinese Sacred Lily (Narcissus)

THIS narcissus is called by the Chinese the "Joss Flower" or "Flower of the Gods," and "Water Fairy Flower." It is highly prized for the abundance of its flowers and its marvelously rapid growth. The flowers are white, with yellow cup, and very fragrant; they are mostly single, but a few doubles are sometimes found amongst them. Each bulb produces several flower-spikes, bearing many flowers. In China and Japan the bulbs are grown in the living rooms in fancy bowls filled simply with pebbles and water. The bulb in this country can be grown as successfully as in China, and it is most interesting to watch its rapid growth, which is about twenty inches in forty days; place in a sunny window by day and on a table near the center of the room by night, as frost destroys the flower buds. Care should be taken that it is not placed in a draft, as this may cause non-flowering. Recommended for Christmas flowering.

Mammoth Bulbs. Each, 10c; per three, 25c; per dozen, \$1.00; 100, \$7.00.

Amaryllis

OF ALL bulbs which the amateur can grow successfully indoors, the Amaryllis is at once the largest, most beautiful, surest to flower and most easily handled. Our new hybrids, especially, are so gorgeous in size and coloring as to amaze those not familiar with them. From a single stem, spring from one to three lily-like flowers, six to eight inches in diameter.

Place only one bulb in each pot, covering it as far as the neck or upper narrow part. Water sparingly at first until the flower shoots begin to appear. Some growers keep them in the dark until the flower stems are four or five inches long, and then bring to light.

After flowering they should be placed in a warm window, or set outside in sand or cinders and watered every day (sometimes twice a day), until the end of August when water should be gradually withheld and the bulbs allowed to go to rest. In the fall they can be forced again as with new bulbs.

EQUESTRE. Orange-scarlet. Each, 20c; doz., \$2.00; 100, \$15.00.

VAUGHAN'S NEW HYBRIDS. One of the finest strains of Amaryllis we have yet seen, raised by an eminent grower whose entire stock we have purchased. Flowers are immense, in an amazing range of colors, blended, splashed and striped in a manner not seen in other strains. Each, 55c; doz., \$5.50; 100, \$40.00.

JOHNSONII. Has immense trumpet-shaped flowers, which measure 6 to 8 inches across, are borne on strong fleshy spikes, and are rich, deep velvety crimson, each petal having a broad white stripe contrasting beautifully with the deep red color. Each, 40c; doz., \$4.00; 100, \$30.00.

Gift for Your Gardening Friend

Nothing will so delight the garden lover as a gift of something for the garden. You may not know just what your friend most desires—whether a lily bulb of some prized variety, tulips of just the right color to fill a certain place, or an implement which will make her work in the garden easier. You may place the coveted treasure within her grasp by sending her a gift certificate from Vaughan's Seed Store, which can be exchanged for anything listed in our catalogs, which illustrate, describe and price everything a gardener needs or desires.

Hyacinths in Pots For Winter Blooming

ALIGHT, rich soil produces the best flowers. Place each bulb one inch deep, an inch and one-half from each other bulb or edge of pot. Water well, and set away in a dark, cool cellar, or an outdoor pit which is well drained. If outside, cover with three or four inches of sand or ashes. Let them remain there for eight or ten weeks to root, then bring them into a warm room, but keep them in the dark (cover the pot with a paper bag, cloth, etc.). Then when the flower spike is three or four inches out of the bulb, they may be exposed to the light, and will open beautifully. The larger bulbs are best for indoor growing, the largest bulbs throwing the most magnificent flower spikes. French-Roman Hyacinths are excellent for growing in pots, flowering earlier than the others.

Hyacinths in Glasses

Fill the glass with clear, soft water, so as to nearly touch the base of the bulb, putting a small piece of charcoal in each glass to keep the water pure and sweet. The filled glass should be placed in a dry, cool, dark place, and kept there until the roots almost touch the bottom of the glass, when they may be given more heat, and gradually exposed to the light. Water must never be changed, but only be replenished. Large bulbs are best for this purpose.

Hyacinths in Gardens

Hyacinths are returning to popularity for both formal beds and border plantings. They provide much needed blues. Plant in any good, well drained soil. The beds should be raised several inches above the surrounding

ground to prevent lodgments of water which causes bulbs to rot. Bulbs should be set six inches apart and six inches deep. The smaller bulbs produce good results when planted outdoors.

Numbers following name of variety indicate time of flowering, each number following in time of flowering.

During the winter, quantities of these flowers are gathered wild around Cape Town, South Africa, and shipped dry to England, always arriving in excellent condition. A pot of this plant was exhibited at San Francisco, where it received the gold medal and remained on exhibition five days. Then it was taken to a photographer, with whom it remained for four days. Then it was taken to the monthly meeting of the Peninsular Gardens Association, where it received a certificate of merit, and a week later it was shown at the Hillsborough Garden Club Flower Show on May 5th. DARWIN TULIPS are beautifully outlined, cup-shaped and carried on tall, stiff stems. They vary in color from almost jet black, crimson and scarlet, purple to lilac, mauve, pink and indescribable intermediate blending and pastel shades. Yellow is the one color missing, but this can be supplied from the Cottage varieties listed on following pages and from the richly blended Breeders, varieties may be chosen which will increase the effectiveness of a planting of the pastel tints so prevalent among the Darwins.

Planting. Plant four or five inches deep and six inches apart in raised beds or borders so that the bulbs are slightly above the level of adjacent lawn or walks. In preparing the ground, use Vaughan's Rosegrower Bone Meal (three handfuls to a square yard), thoroughly mixed through the soil.

Triumph Tulips Mixed Although they flower a few days later than the Mendel tulips, the stems of most of the Triumph tulips are taller and the color range includes not only the pink shades of the Darwins, but also the coloring and form of the Cottage type, as they are a cross between the single early types and the Darwins and Cottage. Cottage Tulips

COTTAGE tulips are inclined to have pointed petals, sometimes turned back, and the blossom to be smaller and more slender. But they harmonize perfectly with the Darwins and Breeders and supply a quality of clear, bright color which these lack, while they have pure yellows not found in others. Every known shade is to be found among these, from deepest crimson to bright red, orange, glorious yellows, pink and a host of delicate tints of yellow, pink-cream and heliotrope. They blossom a few days later than the Darwins, often carrying the flowering period of Spring bulbs into the early days of June, especially if planted in a shady position. Many sweet-scented varieties are included, such as *Gesneriana Lutea*, and *Mrs. Moon*.

***For Pots.** When grown in pots, these, like the Darwin tulips, can be had in flower indoors during March and April, in a temperature not exceeding 55 degrees. Those best suited for growing in this way are marked*.

Breeder Tulips

BREEDER tulips are closer to the parent type of this ancient flower than others.

The origin of the tulip is hidden in the dim past. But we know that the Dutch fanciers who in 1634 to 1637 speculated in new varieties during the reign of tulipomania grew the "mother bulbs," or Breeder tulips, to produce new striped varieties by "breaking." The Darwin race is supposed to have developed from the Breeders. For a long time the dark, rich colors of the latter were neglected in favor of the brighter and clearer tones of the other types. But recently taste has changed, and the richly hued Breeders have come into favor.

They blossom in May, and though not so tall, perhaps produce, as a rule, even larger blossoms than the Darwins. The colors include many rare among flowers—browns, bronzes, purples, blue-blacks, deep mauves, dull gold and dark lilac all exquisitely blended.

Planting. Plant the same as Darwins. Parcel post weights are also the same.

Attraction Large globular flower of magnificent form and deep, rich violet purple. Flower opens nicely and is carried strongly erect on a tall stem. Height, 25 inches. Doz., \$1.00; 100, \$7.00; 1,000, \$65.00.

Bacchus Despite the fact that this is one of the oldest Breeder tulips in existence, having been introduced over 300 years ago, there is no other tulip that can be called its superior in clear, richness of color and beauty of form. The flower is rather narrow and long for a Breeder, the color is very similar to the purple of Concord grapes. Height, 28 inches. Doz., 80c; 100, \$5.50; 1,000, \$50.00. (Illustrated on Inside Back Cover.)

Bronze Queen (28 in.) Soft buff, inside tinged golden bronze, good forcer. Doz., 60c; 100, \$4.25; 1,000, \$38.00. (Illustrated on Back Cover.)

Cardinal Manning An extremely late flowering tulip. It warms the heart to see the rich wine red flowers of this variety open fresh and bright after most of the others are drooping with old age. Height, 28 inches. Doz., 65c; 100, \$4.50; 1,000, \$40.00.

Chestnut Very dark brown, almost black. Height, 24 inches. Doz., 80c; 100, \$5.50; 1,000, \$52.50.

Copernicus Dark coppery bronze, with a slight flush of bronzy old-rose; interior is a warm brown, with a yellow base. The flower is large, carried upon a sturdy stem. Doz., 80c; 100, \$5.50; 1,000, \$50.00.

Creation Without question one of the finest orange bronze tulips ever introduced. When in full bloom the flower becomes bright orange with a delicate shade of bronze. A glorious tulip when forced in mid-January. Large flower on a tall and strong stem. Each, 35c; doz., \$3.50; 100, \$25.00.

Golden Buff A tremendous tulip on a tall and stiff stem, dull golden buff, center greenish yellow. When forced this flower becomes bronzy-yellow and is superior to any variety in this shade. A color as yet not found amongst the breeders. Each, 45c; doz., \$4.50; 100, \$30.00.

Golden Bronze (24 in.) Beautiful bronzy yellow, good forcer. Per doz., 80c; 100, \$5.50; 1,000, \$50.00.

Indian Chief Above all other tulips, even Louis XIV and Roi Soleil, Indian Chief towers like a giant, dwarfing in comparison varieties that we long considered unsurpassable. The flower is enormous, very widely opened, and squarely built. The flower is Indian brown in color, the petals are of very heavy texture, the stem extremely heavy and straight as a ram-rod. Height, 38 to 40 inches. Each, 25c; doz., \$2.50; 100, \$18.00.

Double Early Tulips

THERE is a distinct revival of the popularity of double tulips. Coming a little later than the singles, they last much longer, and where the single and double are planted together the season of flowering is prolonged from two to three weeks. The double tulips require a soil more fertile than the singles for perfection of blossoms; and where well grown their mammoth peony-like flowers of delicate or brilliant coloring are most effective either in groups in the border, or in formal beds. The double tulips do very well when grown in pots for winter blooming, but they must be forced more slowly than the single tulips.

Explanatory. The number following the name of the variety denotes the height in inches, while the (a) and (b) indicate their earliness of bloom—the (a's) flower together and are earliest; the (b's) flower together, but are somewhat late.

TWO OR THREE weeks of brilliant color in April, following the daffodils and preceding the Darwin tulips, are worth much to any garden. The early tulips alone can supply it; and among them can be found varieties to play almost any part your garden scheme demands. It is a mistake to think of the early tulips as all short-stemmed, and too bright in color. It is true their brilliancy cannot be excelled by any other class of their own family or any other flower family that we know. But there are also varieties of delicate tints and shades, as beautiful and with flowers as large as anything the May-flowering classes can produce. In height, 12 inches is not uncommon, and a graceful carriage fits these taller kinds to serve in any role a Darwin would grace.

Explanatory. The number following the name of the variety denotes the height in inches, while the (a) and (b) indicate their earliness of bloom—the (a's) flower together and are earliest; the (b's) flower together, but are somewhat late. The Duc Van Thol Tulips should be used for pots only.

Striped Tulips

THOUGH too gay for modern taste to serve in large plantations, the old-fashioned striped tulips are beautiful. They prove that the Dutch tulipomania was not without excuse, and no gardener who wishes his collection to be representative will be without some specimens.

The Hardy Lilies

LILIAM Auratum

LILIAM Rubrum

Many imported lily bulbs arrive in this country very late in the fall. Note carefully the arrival dates stated below. If freezing threatens before your bulbs arrive, cover the soil with a heavy mulch to keep it soft.

LILIES are so beautiful, so fragrant, we are likely to think them too fine for the amateur to grow. But many are hardy, thrifty flowers, capable of surviving conditions which would overcome flowers much less beautiful. Grow them in the border in small groups, with background, where their beauty has a suitable setting for its display. They blossom, as a rule, in midsummer, when fine flowers are at a premium.

An exquisite lily of unknown hybrid origin, but it is generally conceded to be a cross of the Madonna lily with the scarlet turks-cap, *Chalcedonicum*. It grows as high as six feet, the basal leaves are large, diminishing in size toward the top as in the *Candidum*. There are three to ten flowers, three to four inches across. They are nodding, with reflexed, waxy, glistening petals, rounded at the tips, and of a creamy peach color popularly known as Nankeen yellow. The anthers are a reddish orange, a delightful contrast against the cream of the flower. It blooms at the same time as the Madonna lily. The bulb, which should be planted five inches deep, does best when planted early in the fall.

Miscellaneous Bulbs

The very first flowers of spring are the minor bulbs, snowdrops, scillas, chionodoxas, crocuses, which come before narcissi. On these pages will be found many other interesting garden treasures, including those fine subjects for rock gardens, erythroniums, brodiaeas and camassias.

Amaryllis Hallii

(*Lycoris Squamigera*) For Outdoor Planting

Produces in early spring attractive green foliage which grows until July when it ripens off and disappears, and one not familiar with its habits would think the bulb had died, but about a month later, as if by magic, the flower stalks spring from the ground to a height of two or three feet, developing an umbel of large and beautiful lily-shaped flowers three to four inches across and from eight to twelve in number, of a delicate lilac-pink shaded with clear blue.

Culture—As the bulb is perfectly hardy without any protection it can be planted either in the fall or spring, but we consider fall the best time as the bulbs will have a chance to get established before flowering time. Cover the crown about four inches. Very useful for the border or among shrubbery. Each, \$1.00; Doz., \$10.00.

Anemone (Windflower)

They succeed best in light, rich, well-drained loam. Plant in November, or as soon as the ground can be worked in the spring. If planted in the autumn they should be covered with leaves, straw or long manure on the approach of winter.

Flower Seeds for Fall Sowing

FEW know many of our prettiest and best known annuals may be sown in the fall, in fact some varieties, like the annual Larkspur, are much better, treated in this way. The principle is the one Nature uses. Seed dropped from parent plant will lay dormant in the soil until early in the spring when it germinates and begins a root system long before one can get in the ground to sow seed. Consequently the flowering season is prolonged by the earlier blooming. Ground should be prepared and seed sown just previous to the late heavy frosts. The fall-sown plants as a rule are much sturdier and better established on the blossoming date than those started indoors.

Another advantage of fall sowing is that it relieves pressure in the springtime. Care should be taken not to sow too early, as the seed will germinate and die in the fall. Early November is the best time, except for Pansies and Violas, which should be sown in September.

Sweet peas should be heavily mulched with leaves or straw.

Perennials for Fall Planting

HARDY perennials may be set out this fall in time to become well established before winter sets in; and next year will see them better developed, and bearing finer flowers than can be obtained from plants set in your border next spring.

This advantage is accompanied with very little extra risk. We do not list the kinds which need special protection through the winter. It is always well to apply a mulch over newly planted perennials, after the ground has frozen. This will tend to prevent winter

thaws and frost heaving. Plants should not be placed where water stands, as excessive dampness in the winter causes rot.

All plants are F. O. B., Chicago.

Plants are shipped with their roots well wrapped; and as packages must go by parcel post or express, it is impossible to make prices which cover postage, and are fair alike to all customers. So all prices in our plant list are F. O. B. Chicago, and if it is desired to have them sent by mail, postage should be added at zone rates. If sent by express, they go collect, at customer's expense.

Vaughan's Peonies

PEAONIES, especially the modern introductions, are probably the most valuable, and most beloved of all perennial plants. Planted in sun or semi-shade in single clumps or long beds; or bordering lawns, shrub rows, and carriage drives, they give a grand display of large fragrant blossoms of brilliant colors during June, followed by their exquisite foliage which is very ornamental during summer months. They are also most effective for home and table decorations, and last longer in water than many other perennials. Avoid buying cheap Peonies; they require just as much care as the better kinds, and are disappointing in the end.

Planting. Peonies may be planted from September first until May. Orders should be sent in at once so that we can forward when weather permits. Avoid planting too deeply, as this is often the cause of shy blooming, 2 or 3 inches of soil over the crown (eyes) being sufficient. We offer Divided roots, (D) natural divisions, having 3 to 5 eyes of blooming size.

The figures preceding the varieties are the rating given to them by the American Peony Society, based on a scale giving 10 points for perfection.

Peonies in the Little Garden. By Mrs. Edward Harding. This is a delightfully written book which epitomizes the experience of years, and provides entertainment, instruction and inspiration for the peony admirer. Postpaid, \$1.80.

Roots by Parcel Post.—If to be sent by parcel post, add postage as follows: Single roots, 8c; two roots, 12c; 3 roots, 16c.

Helpful Details Making Mail Orders Convenient

Order at Once Send in your order as soon as possible after receiving catalog. Bulbs for immediate planting will be sent at once, others at proper time, with due notification.

How to Order Use the order sheet accompanying this catalog. One section is for seeds, bulbs and sundries (i. e. Insecticides, Manures, Poultry Supplies, etc.); the other for plants, shrubs and trees only.

Don't put plants and trees on the same section with bulbs and seeds.

Important Write your name, postoffice, state and express office plainly with black ink, on every order, and every time you write to us give plain express, mail or freight directions; where none are given, we route the same at buyers' risk.

Quantity, Size, Price Always give the quantity required of bulbs, plants or trees, mentioning size where different sizes are offered, and carry out the price of each item.

Mistakes These will happen in spite of all care. Write us at once with copy of original order if possible, and mistakes will be promptly rectified. Please do not return goods until you hear from us.

Parcel Post Fourth Class Mail Matter, which includes seeds, plants, bulbs, roots, books, tools, insecticides (in dry and paste form), odorless fertilizers and requisites, may be forwarded by domestic parcel post within the United States. See table opposite showing postage you should add to insure free delivery. All poisonous Insecticides, are unavailable.

Express Service For most orders exceeding 20 pounds in weight and for plants requiring special packing, we urge they be expressed. Mark order plainly if wanted by Express or Parcel Post.

Our Terms with customers not having an account are strictly cash with order. We make no C. O. D. shipments unless one-third of amount is paid in cash with order. No trees, plants or other perishable stock, are sent C. O. D.

How to Send Money Send by New York or Chicago draft, registered letters, or postoffice or express money order; both are cheap and absolutely safe. Small postage stamps are taken as cash, but we prefer larger denominations, such as fives, tens or fifteens. Registered letters can be sent from any postoffice, and your receipt sent you by return mail if demanded. If personal checks are used have them certified and add 15 cents for exchange cost. Put no currency in letter unless you register the same. Make money order payable to "Vaughan's Seed Store."

PARCEL POST Vaughan's Seed Store at Chicago and New York, covers the United States in a remarkable way to secure cheap postal rates for its many mail order customers.

The weights of all bulbs and roots offered are given and customers are requested to add sufficient to their remittance to cover postage on total estimated weight of order at rates given in the following table.

Our Responsibility It is so manifestly impossible for a seller of any perishable article to be responsible for what may happen to it after it leaves his hands, especially one like seeds, which are planted in the ground under varying conditions of soil and climate, that we, in common with all American seed houses, disclaim responsibility as to the crop which may be raised from seeds which we sell.

At the same time, in case of any failure to secure proper results caused from some inherent fault in the seeds themselves, Vaughan's Seed Store accepts responsibility, not for crop, but to the extent of the amount of money paid for the seeds, if immediately advised. Or seeds may be returned.

We Do Not Warrant in any way, expressed or implied, the contents or the description, quality, productiveness or any other matter of any seeds, bulbs, plants, shrubs or trees sold by us, and we will not be in any way responsible for the crop. If the purchaser does not accept these goods on above terms, no sale is made thereof, and he must return them at once and money will be refunded. Subject to the above conditions, we make this sale at the moderate prices at which we sell our goods.
