GERMAIN'S of California

IN 1871, The Germain Seed and Plant Company was founded in the City of Los Angeles—one of the few pioneer firms in this city that can boast of three quarters of a century of continued progress and expansion. From a small retail store, it has become a National and International institution, shipping its products throughout the United States and to many foreign countries.

Germain's ultra-modern Retail establishment in Los Angeles' downtown business district is among the finest in America. No one should fail to visit it when in Los Angeles.

Branches patterned after the Los Angeles store are located in the following California communities: San Francisco, San Diego, Santa Maria, San Jose, Fresno, Compton, Salinas, El Monte, Watsonville, Sacramento, and Van Nuys and in Phoenix, Ariz.

At our nurseries, many acres of lath and greenhouses are devoted to the culture of orchids, flowering and foliage plants, roses and perennials.

Thousands of acres in the West are devoted to the production of Germain's seeds, plants and bulbs—and are supervised by men thoroughly trained in the Horticultural profession.

This, perhaps, explains why more gardeners all over America are planting Germain's seeds and Horticultural products each year.

Illustrations are views of some of our retail stores. Upper Right: Entrance to Los Angeles store. Lower Left: Partial view of Van Nuys Nursery.

Grow Your Favorite Flowers From Seed

IN THE directions which follow we have indicated the various methods used in successfully starting annual and perennial flowers from seed.

Paragraph "A" describes in as much detail as our space permits the best way to start seeds of hardy annuals and perennials in the open ground. "B" refers to those varieties among them which are not hardy against frost. Paragraph "C" is intended for plants which, although intended for outdoor culture, are required to be started in sheltered seed pots or boxes and later transplanted to their permanent

location in the garden. "D" outlines the sowing and early stages of greenhouse and indoor pot plants.

While we have tried to make the above directions as complete as possible, a good grasp on the management and needs of young plants is gained only by experience, supplemented by the advice of friendly gardeners in your neighborhood and by the reading of good garden books, dealing with the subjects of interest to you.

There is no hobby more fascinating, no occupation so healthful or wholesome, as the study and culture of beautiful flowers.

A—Sow the seed in the open ground in the spring or in the fall. The soil should be well spaded and raked to a smooth even surface. Scatter the seeds evenly and thinly, covering them very lightly with light, moist soil.

Small seeds resent being buried too deeply. All seeds, except unusually large ones, should be covered only about $\frac{1}{8}$ inch with soil. Very tiny seeds should be scattered merely on the surface and pressed gently with the hand or a smooth board. This brings the soil around them and is all the covering they need.

If preferred, seeds may be sown in rows instead of scattering them broadcast. Shallow drills or trenches are easily made by pressing the edge of a narrow lath gently into the soil. Sow the seed in the shallow trenches and cover lightly.

When planting seed, the soil should be moist, but not too wet. As soon as the seed has been sown and lightly covered, always press the surface of the seed bed down firmly and smoothly. This brings the soil in close contact with the seed and helps in keeping it evenly moist, hastening germination.

When the young seedlings are large enough to handle they should be thinned out in order to give the remaining plants sufficient room to develop normally. The plants removed while thinning may be transplanted to a new location in the garden.

B—Sow the seed in the open ground in the spring after all danger from frost is past. Proceed as in A.

C—Start in seed pots or in flat boxes during winter or early spring and transplant to the open ground when the weather permits. The box or pot is filled to within an inch or so of the top with a good mixture of garden loam and leaf-mold or peat with a little sand added to insure good drainage. The seed is sown thickly on the surface, covered lightly, either with soil or sharp sand, and pressed down firmly.

Boxes and seed pots may be covered with a pane of glass for added protection and to help in retaining moisture. Shade also is needed until the seedlings appear. In the case of shade-loving plants, the shade, of course, must be maintained. As soon as large enough to handle, the young seedlings must be transplanted to other boxes or to the open ground. If left too long in the crowded seed box, they will become weak, and "drawn."

D—Sow the seed in seed pots or boxes as in C. When large enough to handle transplant into flower pots or other containers suitable for indoor or greenhouse culture. Cover hole in bottom of containers with pieces of broken pot to insure good drainage and use a good grade of potting soil. As the plants grow they are moved to larger pots. Sun-loving potted plants thrive in a sunny window or greenhouse. If the plants require shade, place them in a bright window protected from direct sunlight or in a shaded glass house.

CULTURE

Peas may be planted in almost any kind of soil. In light soil during the warmer months they should be planted about 3 inches deep so as to be near moisture. In heavier soils or in fall months plant about 1 inch deep, that warmth may penetrate and help germinate the seed. Rows should be about 2½ to 3 feet apart. Excessive moisture will rot the seed, so do not irrigate after seed is planted until the plants are well out of the ground. Usual planting is at rate of 60 pounds per acre. One pound will plant a row of 150 feet.

Field Mustard, Wild Black Seeded (*Charlock*). Also successfully used as a non-leguminous cover crop.
1 lb. 25c; 10 lbs., \$2.00

Trieste Black Mustard (*Brassica nigra*). A greater tonnage can be obtained from this variety than the Yellow variety but its growth is slower.
1 lb. 30c; 10 lbs. \$2.50

Canadian Field Peas May be planted in cold weather and furnish a most valuable cover crop. Plant 75 lbs. to the acre.
1 lb. 25c; 10 lbs. \$2.00

Will grow on practically all kinds of soils and are great nitrogen producers. Plant 60 to 90 lbs. per acre in the spring or summer after the ground is thoroughly warm and all danger of frost is over.
1 lb. 30c; 10 lbs. \$2.50

Sesbania A cover crop that is especially adapted to hot climates and therefore is being used to a great extent for planting in the Imperial and Coachella Valleys. It is a leguminous plant containing an abundance of nitrogen bearing nodules on its heavy tap root. Plant at the rate of 12 lbs. to the acre.
1 lb. 40c; 10 lbs. \$3.50

GERMAIN'S FIELD AND ENSILAGE CORN

Note—Prices on field corns listed below are postpaid in quantities up to and including 10 pounds. If larger quantities are desired, write us for special prices. If grown for the corn, field corn should be drilled in rows three feet apart, and two feet apart in the rows, requiring about ten pounds per acre. If grown for ensilage, the rows should not be over one foot apart, and thirty inches apart in the rows, requiring 50 to 75 pounds to the acre.

HYBRID FIELD AND ENSILAGE CORNS

Yields have averaged from 15 to 20 bushels of corn per acre over open pollinated varieties. Growers are cautioned not to attempt to save hybrid corn seed as the hybridization work must be repeated each year. We list hereunder two varieties, one recommended for ensilage and one for grain.

Hybrid Ensilage Corn No. 520

This Yellow Dent Corn is an extremely heavy producer of silage. It comes in tassel in about 97 days and is ready for husking in about 110 days.

1 lb. 30c; 10 lbs. \$2.50

Double Cross Hybrid No. 470

We recommend this hybrid corn for planting for grain. It is a yellow dent variety and is about a 90 day corn.

1 lb. 30c; 10 lbs. \$2.50

NOTE—Prices listed are postpaid.

Semesan Jr. should be used to disinfect seed corn before planting, to destroy such disease germs and fungus spores as adhere to the surface coat or in some cases exist internally. Semesan Jr. possesses remarkable properties for sterilizing seeds, accelerates germination, stimulates growth, influences earlier maturity, develops sturdier plants, and increases crop yields. See page 71 for prices.

CORN—FIELD Open Pollinated

Big Jim Corn

One of the heaviest yielders grown in California, both for grain and silage. Kernels rich yellow and very large ears, 10 to 14 inches long and cob small. Our recommendation as the best field and ensilage corn for the Southwest.

1 lb. 25c; 10 lbs. \$2.00

Hickory King, White

This corn is entirely distinct from all other varieties, having large kernels with a small cob.

1 lb. 25c; 10 lbs. \$2.00

ENSILAGE CORN

Open Pollinated

Orange County Prolific

Orange County Prolific is a California product of the white dent variety. It is an exceptionally heavy yielder and highly recommended for ensilage purposes.

1 lb. 25c; 10 lbs. \$2.00

Mexican June Corn, White

Very early and hardy, stalks growing to an average height of 7 or 8 feet and producing 30 to 60 bushels of corn per acre. This corn is also used for roasting purposes.

1 lb. 25c; 10 lbs. \$2.00

King Philip, Yellow

This is a hard yellow flint corn and is generally referred to as ninety-day corn. It is drought resisting and will give a fair yield where most corns are a failure.

1 lb. 25c; 10 lbs. \$2.00

GERMAIN'S SORGHUMS AND SUDAN

Write for quantity prices.

SACCHARINE SORGHUMS

Early Amber

Furnishes most nutritive forage, which can be fed either green or cured, and will yield two or three cuttings a year, stooling out thicker each time it is cut. It grows ten to twelve feet high. Sow broadcast for forage at the rate of 5 lbs. per acre in drills 3½ to 4 ft. apart.

1 lb. 25c; 10 lbs. \$2.00

Honey Sorghum

For ensilage and for syrup purposes. It is a fine variety for silage purposes, having slender leafy stalks, varying in height from eight to twelve feet. It is medium late maturing and has decidedly tender stalks, and is important from a forage standpoint. When the crop is to be used for fodder or silage, it is usually planted in rows 3 to 3½ feet apart, using up to 5 lbs. of seed per acre.

1 lb. 25c; 10 lbs. \$2.00

Write for special prices in larger quantities.

NON-SACCHARINE SORGHUMS

Dwarf Milo Maize

Grows to a uniform height of 4½ to 5 feet; its stalks being a mass of leaves overlapping each other and under average conditions yielding from 2 to 2½ tons of threshed grain per acre. It is drought resisting, a vigorous producer, easy to harvest and is the finest grain we know. Plant six pounds per acre in rows 3 feet apart and plant six to twelve inches apart in a row. Planting should be done in the spring, after all danger of frost is past and the ground is warm.

1 lb. 25c; 10 lbs. \$2.00; 25 lbs. \$4.00

Double Dwarf Milo Maize

(Calapproved No. 38). Similar in all its characteristics to the Dwarf Milo Maize except in height. This strain grows 2 to 2½ feet tall and therefore can be combined. We offer this year "Calapproved" seed of this variety. "Calapproved" seed is resistant to Pythium root rot and must meet rigid standards of purity in type, uniformity, and germination in order to meet the requirements of the State Department of Agriculture.

1 lb. 25c; 10 lbs. \$2.00; 25 lbs. \$4.00

White Kaffir

Unsurpassed for dry alkali land, on which no better fodder and grain crops grow. A prolific member of the sorghum family, having more foliage and smaller stalks than any other varieties, and harvested very easily. Its great root system enables it to produce wonderfully in drought sections and to break up new ground for other crops. Cattle relish the stalks; the grain is a valuable food for poultry. Plant six pounds to the acre.

1 lb. 25c; 10 lbs. \$2.00

Hegari

The seed is round and white and does not shatter very readily. The heads grow very erect. It is drought resisting and stands some alkali. Plant six pounds to the acre.

1 lb. 25c; 10 lbs. \$2.00

Egyptian Corn

The grain is produced in large compact heads and the seed is flat and pure white. Plant the same as Milo Maize.

1 lb. 25c; 10 lbs. \$2.00

SUDAN

Sudan Grass

Grows on a wide range of soils from sand to clay, and produces from four to six cuttings of highly nutritious hay per acre. As a pasture crop it is unexcelled and succeeds where others fail. Sow 15 to 20 lbs. of seed per acre in the early spring after all danger of frost is past, and you will be assured of a bountiful supply of forage until late fall.

1 lb. 25c; 10 lbs. \$2.00

Sudan Grass, Calapproved No. 23

We advise growers of Sudan to plant this new improved strain. Developed by the University of California, it has yielded on actual test about 20% more than ordinary Sudan, and in addition is much more uniform in its growth. This seed is grown under the "Calapproved" plan of the State Department of Agriculture, which means that it must meet the most exact standards of type, purity, germination, and freedom from weed seeds.

1 lb. 30c; 10 lbs. \$2.50

Sweet Sudan Grass

A new variety resulting from several years of breeding work at the Texas Agricultural Experiment Station in cooperation with the Bureau of Plant Industry, U. S. Department of Agriculture. It is sweet and juicy and more palatable to livestock than Common Sudan. It is disease resistant, remains growing longer, has broader leaves, heavier and taller stalks and stools more readily than Common Sudan.

1 lb. 40c; 10 lbs. \$3.50

Aphis (Aphids or Plant Lice). Less than 1/8" long. The most common of these is the green aphid on roses. See No. 2, 5, 15, 21, 33, 40, 42.

Beetle. The twelve-spotted kind (*Diabrotica*) is often found on rose buds, dahlias, etc. See No. 2, 10, 11.

Scale. Scale insects injure plants by sucking the sap. Ants carry them, destroy ants also. See No. 16, 19, 38, 40.

Mealy Bug. Waxy scale, usually covered with a white waxy meat. Control ants also. See No. 15, 16, 40.

Rust. Covers stems and leaves with tiny pustules having the appearance of red or brown rust. See No. 7, 22, 38.

Cutworms. Destroy young plants by chewing the stem at or just below the surface of the ground. See No. 1, 10, 24.

Begonia Single Crispa

Begonia Double Camellia Flowered

Tuberous Rooted **BEGONIAS**

TUBEROUS BEGONIAS have during the last years become exceedingly popular with the California Home Gardener, because of their lush green foliage and magnificently colored wax-like flowers. They are unsurpassable for shady locations or as pot plants. Besides shade they need a moist soil with plenty of leaf mold or peat. Good drainage is also necessary

THE "MARINA" STRAIN

February-May Delivery

Our Tuberous Rooted Begonias are grown in the Monterey Bay area, centered around the Marina district, where the climatic conditions are especially favorable to the culture of Begonias. The "Marina" strain is the product of many decades of careful breeding and selection by some of the foremost experts in this particular field. It is without doubt the best that can be obtained in Tuberous Rooted Begonias both here and abroad

Unless otherwise noted all types are available in these colors: White, red, scarlet, rose, pink, yellow, orange, salmon, apricot and mixed.

5080 CAMELLIA-FLOWERED. This is the true strain of Camellia-flowered Doubles, which has been developed through years of painstaking hybridization. The colors are true and uniform. The flowers are large and compact.

5090 CARNATION TYPE OR DOUBLE FRILLED. Produces a large double flower, resembling a Carnation in form. The petals are frilled and have serrated edges.

5100 CRISPA OR SINGLE FRILLED. Enormous, intensely frilled and ruffled flowers of the single type.

5110 HANGING BASKET OR LLODII. An unsurpassed strain containing double flowers only. Often hundreds of blossoms to the plant. Excellent for hanging baskets or rock gardens. Available only in mixed colors.

5120 ROSEBUD. A double type resembling perfect rose buds. Many flowers are colored in two shades. We can supply this strain only in a mixture of pastel shades.

5122 MULTIFLORA. We have an excellent strain of this Begonia, which has been popular in Europe for many years, but which is as yet rather unknown in this country. They differ from the large flowering type in having a bushy growth covered all summer with a mass of flowers 1½ to 3 inches in diameter. Excellent for bedding as they form a veritable carpet of color. Available only in mixed shades.

Prices. Large Tubers: 39c Each; 3 for \$1.29; 6 for \$2.49; 12 for \$3.79. Postpaid
