No. 1. Baron Hulot Acknowledged to be the best blue Gladiolus. It grows a splendid, tall, well finished spike with medium sized flowers of fine shape well set on the spike. The color is a rich, deep indigo blue, making it strikingly beautiful in combination with other varieties.

No. 2. Golden West A decidedly showy variety, the color being a clear rich orange-red or scarlet, with golden yellow markings on the lower petals faintly suffused with violet shadings, the only variety we know of showing real gold color. The individual flowers are of large size and stand out boldly, giving the effect of a gorgeous sunset, hence its name Golden West.

No. 3. Peace A very strong healthy grower and a free bloomer. The flowers are large, pure white in color with a slight tinting on the lower petals, making it very delicate and attractive. The flowers are correctly placed on a heavy straight spike, and it is one of the best of the white varieties.

No. 4. Mrs. Francis King One of the most popular varieties in cultivation. The spike grows very tall, frequently branched and covered with large flowers of a rich flame-red or pink with small carmine spots on the lower petals and a darker throat. It is a most beautiful variety and a very strong and rank grower under nearly all conditions.

No. 5. Mrs. Frank Pendleton One of the most beautiful Gladioli, combining the beauty of the apple blossom and the rarest rose. The flowers are round and immense in size and of great substance, the color being a soft rosy pink on white ground while the throat is a rich blood-red. A tall, strong grower.

No. 6. Halley If you want one of the very earliest Gladioli, you must plant Halley. It is a very rapid grower and throws up tall flower spikes, producing immense sized flowers of the most delicate salmon-pink of roseate tinge; lower petals creamy with crimson penciling. The large waxy flowers are admired by all, and being so extremely early it should be in every flower garden. Halley is also fine for forcing and will produce these beautiful flowers in a pot in the house or under glass.

**This Assortment will be carefully packed and should
give an abundance of bloom the
first season planted**

The above collection must in no way be classed with the ordinary Gladiolus. The bulbs which we offer in this excellent group are specially selected bulbs of good size, scarce and beautiful varieties, giving the purchaser an array of color throughout the Summer months.

In order to give the benefit of this special bargain price no change may be made from this assortment, which contains one each of the above 12 named varieties.

All Different—No Two Alike

These bulbs can be planted in March, April, May or June, according to locality, and should bloom in July, August and September. Each bulb will make from one to two spikes of bloom, and a dozen or more flowers on each stem. They last a long time, and keep 10 days or more as cut flowers in the house. We send out only large size blooming bulbs. You will never get a finer collection at this reasonable price. It is not necessary to write out each name separately, merely order as "Gladiolus Collection."

Gladioli--12 Named Varieties

Page for Color of Each Kind

beautiful Gladioli. They should be seen growing to description below of each and order a supply of bulbs.

No. 7. Schwaben A very large variety and if given rich soil and good care will produce wonderful blooms. The spike is unusually large, filled with closely crowded large flowers and many buds reaching to the very tip of the stalk. The color is clear canary-yellow with a shading on the lower petals of a deeper yellow and a touch of dark red in the throat. It is one of the best yellows and a favorite wherever seen growing.

No. 8. Queen of Rochester Here is a variety that attracts a great deal of attention everywhere. It is a production direct from Holland and very uncommon in this country. The flower stalks grow medium height, very strong and stocky and produce large, wide open, bell-shaped flowers of the most beautiful rich deep rose color, with a golden yellow blotch and throat beautifully tinted. We know of no other variety of Gladiolus anywhere near like it and all who grow it will have something very unique and beautiful at a low price.

No. 9. George Paul This is a splendid variety, making a tall, strong spike. It is a rapid grower and will bloom under most all conditions. The flowers are large and well formed, of the most rich, dark maroon-red color with purplish markings. It is a very beautiful shade and always attracts much attention.

No. 10. America A most beautiful variety of a lovely rose-pink. Flower spike is long while the flowers are very large, pronounced by all to be one of the finest of recent introduction. We believe it is the softest and has the most charming tone of pronounced rose-pink we know of in Gladioli. Generally admitted to be the best pink Gladiolus.

No. 11. Nora The very unusual color combination makes this variety highly conspicuous. It is one of the strongest growers, the color being a light lavender with crimson and yellow throat beautifully tinted, giving it the appearance of a pansy, in fact many call it the Pansy-Gladiolus. It is very striking and beautiful.

No. 12. Mrs. Watt Here is a variety admired by all flower lovers. It is a glowing American Beauty Rose color, flowers nearly all open at the same time making it a most lovely sort. It is very distinct, of medium growth, producing a good spike filled to the very tip with flowers and buds. It is a variety that is sure to please.

Should be Planted Only in the Spring

Bargain Price for the Group of Twelve
\$2.50 only

Bloom the first season, exquisite tints. A beautiful selection in every respect. Every home should have one or more of these groups. Plant in Spring, these bulbs bloom during the Summer.

Should be Planted Only in the Spring

**Bargain Price for the Group of Twelve
\$2.50 only**

Bloom the first season, exquisite tints. A beautiful selection in every respect. Every home should have one or more of these groups. Plant in Spring, these bulbs bloom during the Summer.

Why Gladiolus Should Be Planted

There is no flower that has so lately increased in popularity as Gladiolus.

During the past few years wonderful improvements have been made in the development of new and beautiful varieties. Those which we show are truly magnificent in their size and beauty. Our aim is not to offer the largest list but to offer a selection of the finest varieties for home culture.

The Gladiolus is one of the most decorative plants in the garden and as a cut flower lends itself readily to any arrangement. If the spikes are cut when the lowest flower is in bloom, the others will open in succession and remain fresh for a week or ten days.

No flower has gained more rapidly in public favor than the Gladiolus; this could not well be otherwise, for in addition to the great intrinsic merit of the flower, it is hardy and blooms the first season.

When to Plant

Gladioli do best when planted in the Spring and can be successfully planted any time after trees are out in leaf until the last of June.

Care Required

The culture of Gladioli is very simple and satisfactory results can be obtained even under the most ordinary conditions. All that is required is fairly good soil and enough attention to keep the weeds down, and in very dry weather, watering during the blooming period is of benefit; one good soaking a week in the evening is better than a dozen light sprinkles, as water must get down to roots to be of benefit.

How to Plant

If best spikes for cutting are wanted, plant the bulbs 4 inches deep. A good way is to furrow out a row that is about four inches deep and four inches wide at the bottom and then plant the bulbs staggering or zigzag. Cover to about one inch and as they grow up through, hoe a little more earth over them. You can continue to do this until they are hilled up a little above the level of the ground. If the soil is not very rich, it is advisable to put a liberal amount of bone meal in the row thoroughly mixed with the soil at planting time. Do not use fresh stable fertilizer.

A second planting two or three weeks after the first will insure a much longer season of bloom.

Some people plant Gladioli among their perennials or they make a wonderful showing when planted alone.

In the Fall they should be dug and planted again the following Spring. As a usual thing they are dug in November allowing them to lay outdoors where they will not freeze or be exposed to the sun for two or three days until the tops die down. Then cut off tops and store in a dry place where the bulbs will not freeze and yet will be away from heat.
