OUR LANDSCAPE SERVICE

The value of artistic planning and designing is recognized by all. This service by our landscape department is **free** to our customers. The members of its staff have had broad experience under a wide range of circumstances, and among them are men who have been trained in Landscape Architecture at such institutions as Clemson College, Cornell University, and Harvard University.

We realize that properly planned grounds are the only ones that reflect credit on the owner and on the nurseryman, and, therefore, we urge our patrons to avail themselves of the opportunity to obtain free of additional cost this unusual class of landscape planning. No job too large or too small.

It is also very important to have the planting done correctly and according to the plan that is being followed. To this end you may have our Landscape Gardeners (the same ones who design the plan) to plant our products on your property for a nominal sum. Or they can plant according to the design of any recognized Landscape Architect, if you desire.

If your back yard is not a beauty spot, let us help you make it one. We specialize in planting the "**Outdoor Living Room**", from which you will get more real enjoyment than from any other planting.

Coniferous Evergreens

(Often referred to as)
"THE CEDAR TYPE"

THE BIOTA GROUP

These are the Oriental Arborvitae. There are various forms from rounding to columnar, and shadings of color from golden to dark green and blue green. Will grow in almost any soil, and will thrive in sandier and hotter locations than most of the other conifers. A very ornamental species, and very desirable for its bright green winter color.

Retinospora; Chamaecyparis. *Japanese Cypress.*

This is the most popular group of evergreens with our landscape staff because of the unique gracefulness and informality of the plants, and the deep green color of most of them. Also they respond very quickly to shearing. The tall growing varieties are equally as good for specimen or background use as for foundation planting.

Retinospora filifera. *Thread-branched Japanese Cypress.* Medium grower; long slender foliage.

2½ to 3 ft.....	3.75
3 to 3½ ft.....	4.50
3½ to 4 ft.....	5.00

Retinospora obtusa. *Hinoki Cypress.* Open, free growth, finally making large plant when set in open.

SECRETARY OF STATE

STATE OF NORTH CAROLINA
DEPARTMENT OF STATE
RALEIGH

May 22, 1929

The Howard-Hickory Co., Nurserymen,
Landscape Gardeners,
Hickory, N. C.

Gentlemen:

I take this opportunity to endorse your company as one of the best nurserymen and landscape gardeners in the country. My dealings with you in the past years have been imminently satisfactory and your shrubbery and work are of the highest order and I feel that one of the notable things in your favor is your willingness to always guarantee the life of your shrubbery as well as your work. And when I removed to Raleigh and had occasion to sell my place I had no hesitancy in saying that the plantings done by your company greatly enhanced the value of my property and thereby, I was enabled to sell the property at an advantage and satisfactory price.

Very truly yours,

J. A. Hartness

Flowering Shrubs—Deciduous

Every landscape should have an abundance of these reasonably priced plants to give color and charm to it throughout the year. Plant them in groups of from three to twenty-five in your borders and screens, selecting varieties that will provide a succession of bloom and berry. Or plant them in flowering hedges.

See page 30 for special Prices on quantities of a good selection.

Why build costly fences which decay and require paint when you can plant an attractive shrubbery border or hedge of flowering shrubs or evergreen for less money? All undersirable views should be screened out with planting, and a border around the entire landscape gives a feeling of unity and that the place is the home of a private family.

The Production of Quality Plants

All natural things—soil, climate, and rainfall—seem to favor this locality as a growing station for nursery stock. Important in themselves, they must be aided by trained workers in the fields. Budding and grafting demand skill; planting, cultivating, pruning cannot be left to ordinary help. In all these processes we employ trained men; thus producing in quantity on our 150 acre nursery, quality stock that is not surpassed by any grown in the South.
