WILLIAM PARRY,

Parry, N. J.,

Riverton Station, Pennsylvania R. R., Amboy Division.

Stages running between Pomona Nurseries and Riverton Station connect with trains leaving Market Street Ferry, Philadelphia, 7.20 and 10.20 A. M., 2.30 and 4.30 P. M.; leaving Riverton for Philadelphia at 7.51 and 10.27 A. M., 2.30 and 5.08 P. M.

CAMDEN, N. J. :
S. CHEW, NURSERYMEN'S PRINTER, FRONT AND MARKET STS.
1889.

TO those who have not had an opportunity to visit **POMONA NURSERIES**, the following unsolicited notices from the press may give some information :

From the West Jersey Press.

Judge Parry, of Parry P. O., N. J., the well and widely known fruit and berry culturist, has in the process of propagation a new variety of Pear, Keiffer's Hybrid, which gives promise of great productiveness and profit. His long experience and conceded skill in this department of agriculture are quite sufficient to give a large sale to any fruit he endorses. No man in this country has done more to bring to notice the triumphs of fruit and berry culture than he has, and to him more than any other man, perhaps, is the country indebted for the fruits with which our markets have been supplied.

From the Journal of Commerce.

THE POMONA NURSERIES.

In 1838 Mr. William Parry commenced, on a comparatively small scale, the nursery business. From that date to the present he has cultivated the same homestead farm of over three hundred acres, and which is known throughout the country by its title of Pomona Nurseries. It is the finest and most extensive in the State of New Jersey (being located about eight miles from Camden, on the Westfield Pike.) Of its large acreage, about one hundred are devoted to the culture of the smaller fruits. Every new fruit is carefully tested before being sent out to the public. Mr. Parry has supplied some of the largest fruit farms in the country and seldom loses a customer once made. There is no danger of getting any inferior stock from the Pomona Nurseries, as Mr. Parry's experience of fifty years enables him to judge pretty well the products of his large farm. His main attention is given to fruits, and much is due to him for the increased interest taken in fruit culture in this State and section. His list comprises fine assortments of apples, dwarf and standard pears, plums, peaches, quinces, nectarines, apricots, grapes and all the smaller fruits. In these latter Mr. Parry is not excelled or equaled by any other grower in the country. His Seedling Strawberries are known all over the Union, while his Gregg and Queen Raspberries are premium winners wherever they go. The Gregg is a black berry, larger, firmer and better flavored than the greater number of red berries. The Queen is red, and is fine and large, selected specimens measuring three inches around. It is a wonderful grower, profuse and yielding a firm berry that does not settle down and bruise in the boxes. Growers will do well to pay Mr. Parry a visit and examine his nursery. They will find what could not be told in the *Journal* under a couple of columns at least. Such a visit would be more than repaid. Mr. Parry's address is Parry P. O., Burlington County, New Jersey.

KIEFFER HYBRID PEAR TREES, FOUR YEARS OLD.

A copy from a photograph, of a section of nursery row of four-year-old trees at POMONA NURSERIES, producing one-half peck or more of fruit per tree.
WILLIAM PAREY, Parry P. O., New Jersey.

PRICES—SPRING, 1889.

Pomona * Nurseries,

WILLIAM PARRY, PARRY, NEW JERSEY.

Express, Telegraph and Freight Depot, Riverton, New Jersey.

PENNSYLVANIA RAILROAD—AMBOY DIVISION.

Money Order Office, Moorestown, (not MORRISTOWN) New Jersey.

Fruits Grown for Market and Plants for Sale.

ANNOUNCEMENT.

The business of Pomona Nurseries, will be continued under the firm name of

WILLIAM PARRY.

As heretofore, by his sons John R. and William Parry, who have had the active management for some years, and who trust that by close application to the business and careful attention to the best interests of their customers, they will merit a continuance of their liberal patronage, and maintain the valued reputation the firm has earned and enjoyed the past fifty years.

Purchasers cannot fail to appreciate the advantage of dealing directly with a well-known firm, that has been engaged fifty years in raising fruits for market, and testing all varieties, over that of buying of irresponsible agents, dealers and others who are but little acquainted with the business, having no fruit of their own growing to sell or exhibit.

The Nurseries are located on the branch of the Westfield and Camden Turnpike, two miles from Riverton, three from Moorestown, eight from Burlington and Philadelphia. A steamboat leaves the latter place for Riverton several times daily, and the cars running between Philadelphia and New York stop at Riverton. Stages running between Pomona Nurseries and Riverton station connect with trains east and west. For time see first page of cover.

Packages for us should be directed to *Riverton, N. J.*, either by express or by freight, and Money Orders should be drawn to Moorestown, (not Morristown) P. O., Burlington County, N. J., and sent to *WILLIAM PARRY, Parry P. O., New Jersey.*

NOTICE TO PURCHASERS.

Having had fifty years experience in raising small fruits, with one hundred acres now in cultivation at our nursery, testing new varieties as they come into notice, and discarding those of least value, we now offer for sale a select list that can be relied on for profit. The prominent points are **LARGE SIZE, HARDY AND PRODUCTIVE FRUITS.** It has been found that of the many new seedlings that are annually brought forward, but comparatively few retain superiority long. Our experimental grounds, on which the different varieties are grown under similar treatment, although expensive, are interesting and useful to those about to form new plantations, and all such are invited to visit our nursery and inspect the different fruits in bearing.

The character for accuracy, promptness and fair dealing which this establishment has earned and enjoyed for more than fifty years, renders it unnecessary for us to publish a list of references or testimonials of assurance that we give prompt and careful attention to all orders with which we are favored, or of the volumes of letters in evidence of our perfect packing, good condition in which plants are received, satisfactory count, etc.

Fruit growers cannot fail to realize that SUCCESS depends upon getting GENUINE, PURE, WELL-GROWN plants, CAREFULLY and SECURELY packed. As we have devoted one-half century to the business, and having in our employ, at the heads of our several departments, men who have been with us a quarter of a century and more, and are conversant and familiar with every peculiarity and characteristic of the different varieties of trees and plants, which, under our system of cultivation, guarded care, etc., render it next to impossible for our stock to become mixed or impure, or to suffer in transportation; and as "practice makes perfect," we are enabled to furnish trees and plants PURE and UNMIXED, at the LOWEST POSSIBLE PRICES.

Our packing season for Spring begins March 1st. and our first shipments are to the most extreme points South and to the Pacific coast. In the Fall we commence in September, and continue through October and November.

When plants are received, take them from the packages, loosen the bunches and dip the roots into a puddle of clay before setting. **DON'T LEAVE THEM IN THE PACKAGE AND POUR WATER ON THEM,** as they will surely heat and spoil.

In presenting this, our semi-annual catalogue, we are pleased to announce that our stock of trees and plants is of unusually good quality, more extensive than in former years, and that the utmost care and best attention will be given all orders.

Being in direct communication with Philadelphia and New York, our shipping facilities are unsurpassed while our experience and system of packing enable us to send trees and plants by mail or express in safety to any part of the country, however distant.

WEIGHT OF TREES AND PLANTS PACKED.

Fruit Trees.....	5 to 7 feet, weight about 50 pounds to 100 trees.
"	3 to 5 feet, " " 25 to 30 pounds, 100 trees.
Grape Vines.....	" " 10 to 25 pounds per 100 plants.
Currants	" " " " " "
Gooseberries.....	" " " " " "
Blackberries	" " " " " "
Red Raspberries.....	" " 5 to 10 " "
Black Raspberry Tips.....	" " 5 to 6 " "
Strawberry	" " 20 to 25 pounds 1.000 plants.

In transporting long distances, where express charges are heavy, roots and tops can be pruned, thereby reducing weights and express charges proportionately.

CONDITIONS OF SALE.

Should any stock we quote be offered by responsible parties at less rates, for the same grade, we will furnish at the same.

We offer no chromos or prize packages as an inducement to buy our plants, but give our patrons more than their value in **QUALITY** of stock, careful packing, etc.

The prices of this pamphlet abrogate previous quotations. The prices affixed are for quantities specified, but half-dozen, fifty and five hundred will be supplied at dozen, hundred and thousand rates respectively.

If your order amounts to \$10 or more, accompanied with the cash, we will furnish an assortment of stock 100 of any kind at 1,000 rates, 1 dozen or more at 100 rates, one or more at dozen rates; or, should any stock we quote be offered by responsible parties at less rates, for the same grade, we will furnish at the same.

Terms Cash, unless by special agreement. We will, however, send by express, C. O. D., if 25 per cent of the amount accompanies the order, although this is an expensive way of remitting. Packing done in the most careful manner.

Packages will be delivered at Riverton station, free of cost, after which they are at the risk and expense of the purchaser, and in case of loss or delay, the purchaser must look to the forwarding companies alone.

When varieties are ordered which we have not, others, similar or better, will be substituted, unless we are requested not to substitute by the person ordering.

No claims will be allowed unless made within ten days after receipt of goods.

We exercise care that all our stock shall be genuine, unmixed, and true to name and quality represented, and accept your order with the understanding and agreement that should any prove untrue to name, we will replace them with the genuine, but are not liable for damages other than herein named. We guarantee the stock to reach our customers in good condition.

Persons who send cash with the order may deduct ten per cent. from the list price, except on mail packages, and the special collections.

No discount unless cash reaches us before shipment.

Money can be sent safely by Post-Office order on Moorestown (not Morristown) P. O., Burlington County, N. J., Bank Check, Draft, or Registered Letter directed to

WILLIAM PARRY,

Parry P. O., Burlington Co., New Jersey.

PLAN OF ORCHARDS.

A. Apple. S. Standard. D. Dwarf Pear, Plum or Peach.

ONE ACRE WILL CONTAIN, AT 30 FEET APART, 48 APPLE TREES, 35 STANDARD PEARS, 82 DWARF PEAR, PEACH, ETC.

The advantage of planting fruit trees on the above plan will be readily seen. By setting the Apple trees 30 feet apart, and filling in with smaller growing trees, the Standard Pear occupying the space between the four Apple trees, and being an upright pyramid grower, they do not interfere with each other.

In 1863 we planted an Apple Orchard, setting the trees forty feet apart each way ; then set a row of Richmond Cherry trees each way between them, requiring three times as many Cherry as Apple trees ; then a row of Dorchester Blackberries in rows and between them, being ten feet apart ; then a row of Strawberries between them, leaving five feet space for cultivation. Next year, 1864, the Strawberries produced the only crop gathered ; they yielded \$200 per acre. In 1865, the Strawberries yielded about half as much, and after picking the fruit the vines were plowed under, and turnips planted in July, which produced a good fall crop. The same year the Blackberries commenced to bear a little and send up a vigorous growth of canes which gave a full crop of fruit in 1865, and continued to do so for five years, yielding over \$200 per acre annually.

The next year they did poorly, and have been removed, to give more room to the trees, which now sufficiently occupy the ground.

The Cherry trees commenced bearing the third year and have borne full crops every year since, the quantity increasing each year with the size of the trees. For several years the fruit has been worth from \$200 to \$300 per acre and sometimes more. One year we contracted with a canning factory near by for the whole crop at ten cents per pound. There were eighty trees to the acre, and many of them yielded seventy-five pounds each.

The Apple trees have a fine growth, and bear large crops of fruit. The Cherry trees in the Apple rows begin to crowd them and will soon be removed, while those standing in the centre of four Apple trees will have plenty of room for many years, and can remain, leaving as many rows of Cherry trees forty feet apart as of Apples on the same ground. By pursuing the above plan, there may be taken from \$200 to \$300 worth of fruit per acre annually, before the Apple trees acquire size enough to bear much fruit, and thus avoid the usual objection urged against planting of Apple orchards, viz., that it requires so long a time before any profit can be derived from the land thus occupied. The same principle will apply to any distance between 30 and 40 feet, and each planter can decide for himself according to the ground to be devoted to fruit. As the heaviest draught upon the soil is when the fruit is ripening, if all mature at once, they might exhaust it of moisture and nourishment, but as they ripen gradually, following in succession, the intervening showers supply each crop as well as if there were no other. By this plan we get 165 trees to the acre, and it is much easier and cheaper to fertilize and cultivate 165 trees to one acre than to have them spread over 5 or 6 acres, to say nothing of the land saved for other crops. Every farmer should have at least one acre of orchard on the above plan, which should yield \$5 per tree. But at half that sum they will give more than \$400 per acre, with less labor than other crops that yield but small returns.

A pamphlet, illustrated, giving fifty years' experience among small fruits, telling *What and How to Plant*, also a pamphlet giving fifty years' experience in Pear growing, telling how to avoid *Blight* and insure good crops.

Either sent by mail for 15 cents. Both, 25 cents.

Yellow Transparent, A NEW RUSSIAN APPLE—"THE EARLIEST RIPENING APPLE GROWN." "Full medium size; rich, transparent, lemon yellow color. Flesh melting, juicy pleasant sub-acid. Ripening ten days earlier than Early Harvest, and is the earliest ripening apple yet introduced." Valuable for market.

Price, 2 years old, 25 cents each; \$3.00 per dozen; \$20.00 per 100.

Red Bietigheimer.—A German variety; size, large; color, light yellow, nearly covered with red, making it a most attractive market variety; flesh white, firm, sub-acid with a brisk pleasant flavor; tree, free grower and abundant bearer. Early Fall.

Price, 25 cents each; \$3.00 per dozen.

Charlottenthaler.—A new Russian variety—very similar to Yellow Transparent.

Price, two years old, 25 cents each; \$3.00 per dozen.

Red Cider.—Supposed to be a sport or bud variation from Smith's Cider, which it resembles in size, growth of tree, immense bearing habit, quality of fruit, time of ripening, and everything except its beautiful red color—hence its name—it being as highly colored as Wine Sap, rendering it very valuable for market. Price, 1 year old, 20 cents each; \$2.00 per dozen; 2 years old, 25 cents each; \$2.50 per dozen; 3 years old, 35 cents each; \$3.50 per dozen.

Delaware Winter.—Remarkable for its long keeping qualities, having been kept in good condition until August with only ordinary care. Fruit, medium to large, round, bright red, highly colored; flesh, fine grained, crisp, juicy, excellent, sub-acid. Tree a vigorous grower and an abundant and early bearer—very valuable.

Price, 1 year, 2 to 3 feet, .25 each,

\$2.50 per dozen.

Price, 2 years, .35 each,

3.50 per dozen.

THE LAWSON PEAR.

Introduced and for sale by William Parry.

A vigorous, upright grower, with clean, healthy foliage. In an existence of one hundred years it has never been affected with blight or other disease. Very productive and bears young; fruit large, some specimens nine inches around; firm and good shipper; most beautiful red color on yellow ground; flesh, crisp, juicy and pleasant, though not best in quality; ripening in Central New York middle of July to first of August. The fruit sold this last summer at \$2.50 to \$4 per bushel.

Our claims for the LAWSON are that in the past century, or three generations,

It has never been known to blight.

It is a vigorous, upright grower.

It is an early bearer.

It is very productive.

It is a good shipping Pear.

It is the earliest large Pear.

It is the largest early Pear.

It is the most beautiful Pear.

It is the most salable Pear.

It is a good eating Pear.

All of which combined render it the most profitable early pear known.

Having introduced the KIEFFER, an October Pear, with such gratifying results to the planters some of whom have set from five to ten thousand trees, we have every confidence that in introducing the LAWSON, a July Pear, from its many valuable features as a market fruit, will meet with the same success.

IT IS THE LARGEST AND MOST BEAUTIFUL PEAR, OF GOOD QUALITY, RIPENING in July in New York State, and when grown in the *Middle* and *Southern* States where it will ripen several weeks earlier, and shipped to northern markets, the value as a profitable fruit is apparent.

W. W. Thompson, the most extensive pear grower of Georgia, writes: "I expect great things of the **LAWSON PEAR**, if it is as early as claimed and of as good color. The tree I know will flourish here equal to the *Le Conte*; at least that is my opinion from my experience this year."

The original tree, estimated to be one hundred or more years old and shows the impress of ages, still stands healthy and vigorous in a cleft of a rock in a clump of bushes with no chance of cultivation.

Wilmer Atkinson, *Farm Journal*, says: "This Pear promises to *make a sensation*. The prominent features are that it is the *largest early Pear* and so *fine in appearance* that it must meet with a *ready sale* on the fruit stands of the cities."

JOHN MCCLEARY, a successful fruit grower of Riverside, N. J., states his **LAWSON PEAR** Tree set Spring of 1885 produced Four Large, Handsome Specimens in 1886, fully equal in size and beauty to the representations, and ripened early in July, and that he considered them a very valuable market Pear.

This variety has recently been called the *Comet* by a propagator, and sold as a *new pear*, which it is not. *Comet* is only a new name given to this old variety that has been growing on the Lawson Estate more than *one hundred years*, and is still grown there by the acre.

KIEFFER'S HYBRID PEAR.

INTRODUCED BY WILLIAM PARRY.

This new variety is unquestionably a great acquisition to the list of choice fruits. It is the best of two hundred seedlings raised from the Chinese Sand Pear, crossed with a cultivated variety supposed to be the Bartlett, which was growing near by the original Sand Pear tree, from which the seed was obtained in or about the year 1868. This seedling tree commenced fruiting in 1873 when about five years of age, and has yielded well every year since several bushels have been gathered of a season. The Chinese Sand Pear, as is well-known, is considered *blight proof*, remaining green and vigorous in situations where other varieties blight and die.

ORIENTAL TREES.

This race of Pears is remarkable for its vigor of growth, luxuriant foliage, extreme hardiness, and freedom from disease—so that they have been valued as ornamental Lawn Trees, and although their fruit is not of the best quality, it has a peculiar quince like flavor, which, combined with its firmness, makes it superior to any other variety for canning, excelling even the justly famous Bartlett for that purpose.

Of these Oriental Pears the Old Chinese Sand Pear has been most extensively grown and considered the hardest, and as far as we are aware has never been attacked by blight or any disease, so that it is generally considered to be blight proof.

After another year's experience it is gratifying to us, the introducers, to state that the *Kieffer Pear* still heads the list as the most profitable late market variety. The trees continue thrifty, rank and vigorous. In our twenty-five acres of Standards every individual tree is a perfect picture of luxuriant health, and are yearly producing an abundance of fine handsome fruit, while orchards of other varieties adjoining are blighting badly.

Our claims for the KIEFFER are:

That the tree is the strongest grower.
That it is the least liable to disease.
That it is the best adapted to all climates and conditions.

That it is the earliest bearer.
That it is the most productive.
That it bears every year, having no off years.

That the fruit is of large size.
That it is of beautiful color.
That it is a good keeper.
That it is the best for canning.
That it is the best for shipping.
That it sells at the highest price in market.

All of which being combined in one variety, place it beyond competition.

Our trees are of unusually fine growth, and entirely free from quince-sap.

In considering the requisites for a popular market pear, we will name the following:

1. A tree of vigorous growth, with luxuriant foliage.
2. A tree that will come into bearing young and produce large quantities of fruit.
3. A fruit of good size, good quality and attractive appearance in market.
4. A fruit that, should one market be overstocked, can be shipped to whatever city will return the best prices.
5. A fruit that ripens at such a season that the market is bare, which will guarantee good prices.

The above all being united in Kieffer's Hybrid, it cannot fail to become a general favorite.

In our nursery rows our four-year olds produce one-half peck or more of fruit per tree and many of the three year olds bend under their heavy crops of fruit. Our six and seven year olds in orchards last fall produced four to six and some ten baskets per tree, which sold in market at highest prices, which advanced as customers became more familiar with the fruit.

QUALITY AND APPEARANCE.

To get the best quality and the most delicate flavor, Kieffer's Hybrid, like most pears, should not be allowed to hang on the tree until it falls off of its own weight, but should be gathered when fully grown, and ripened in the house, when, like the Bartlett, it will color up nicely, which, with its rich glowing red cheek, combined with its delicious perfume, gives it attractions with which but few can be compared.

At the International Exhibition, held in Philadelphia in 1876 by the U. S. Centennial Commission, the prize medal and certificate of award was given to P. Kieffer for this variety. The committee report as follows: "He exhibits a *Hybrid Pear of Remarkable Excellence*, between the common pear of cultivation and the Chinese Sand Pear, giving promise of a *New Race of Great Excellence*."

The Pennsylvania Fruit Growers' Society Reports:

"Of the Seedlings of China Sand Pear it seems proper to state that Kieffer's Hybrid has fully held its own the past year, and so far has proved to be all that was claimed for it, in quality as well as in fruitfulness, vigor of growth and freedom from disease.

And the fall, 1881, we had on exhibition, at Burlington County Agricultural Society, held at Mt. Holly, N. J., trees 1, 2, 3 and 4 years old, the latter showing 17 handsome pears, measuring from 8 to 12 inches around. We were awarded a special medal for this variety.

And whenever exhibited at State or County fairs, it has always been awarded the highest premium by the Society, and received the marked attention and special admiration of the visitors.

In addition to the many Medals, Prizes, Honorable Mentions, Favorable Notices, etc., which we have received from the various exhibitions and Horticultural Societies, we were awarded a SPECIAL PREMIUM for our exhibit of KIEFFER'S HYBRID PEARS, at the American Pomological Convention, held in connection with the Penn. Horticultural Society, Phila., Sept. 1883, showing two four-year-old trees, dug from Nursery rows, and bearing from forty to fifty pears each.

At the World's Exposition at New Orleans, La., 1885, where there were displayed 20,000 plates of fruit, our Kieffer's in competition with the *finest and best pears of the world*, were awarded the following *Grand Prizes and Medals*:

For Handsomest Plate Pears, any variety—Wm. Parry, Parry, N. J., (Kieffer).....	\$10 00
Best Plate Largest and Handsomest Pears, any variety—Wm. Parry, Parry, N. J., (Kieffer)	10 00
Best Display Kieffer Pears—Wm. Parry, Parry, N. J.	10 00
Best Plate of Kieffer Pears—Wm. Parry, Parry, N. J.	5 00
Display of Kieffer's Pears in glass—Canned, of <i>unusual excellence and beauty</i> — Wm. Parry, Parry, N. J., <i>A Silver Medal</i> .	
Best collection Oriental and Hybrid Pear trees—Wm. Parry, Parry, N. J.	20 00

The Kieffer Pear, in competition with the finest and best pears in the world, received more prizes, more premiums and awards than any other variety, showing that its sterling merits and rare good points of excellence were recognized and appreciated by the eminent Judges.

As a *canning pear*, Kieffer's Hybrid has no equal. Heretofore the canning of pears has been of little interest compared with that of Peaches and Tomatoes, from the fact that the Bartletts, the best variety canned, ripens at a season when canners are running to their fullest capacity on peaches and tomatoes, which require to be handled very quickly and to work the Bartletts would be at the expense of the other equally perishable fruits.

Kieffer's Hybrid has all the desirable canning properties of the Bartlett, and, in addition, a preference of season. Ripening in October and November, after peaches and tomatoes are out of the market, the canners can give it their entire attention and extend their season another month.

Although upon our first acquaintance with this fruit we recognized its sterling merits and rare good qualities, yet our confidence continues to strengthen as we gain experience in it.

As Fruit Growers are aware of the many impositions practiced by unprincipled dealers in new and rare fruits, and can appreciate the value of a genuine article over that of doubtful purity, I take this occasion to state we have twenty-five acres in orchards, containing five thousand *Kieffer Hybrid Pear trees*, a large proportion in fruiting, among which are the original trees, procured from the Originator, from whom we are propagating our stock for sale.

And although our stock has been carefully grown from healthy standards, the advantages of which our customers will not fail to realize over those propagated from dwarfs, yet as our supply is large and complete, we will not be undersold, and should they be offered by any responsible dealer or grower at rates below those of this Catalogue, we will furnish at the same.

This rule may also apply to Strawberry, Blackberry, Raspberry Plants Grape Vines, or any other Stock we quote.

WONDERFUL PEACH.

This **WONDERFUL PEACH** was first brought to public notice at Mount Holly Fair, October 11th to 16th, 1886, where its large size, handsome color, yellow, with red cheek, late ripening and good keeping qualities, attracted much attention and admiration from the many thousands of visitors and was awarded a **First Prize** and **Silver Medal** by the Society.

Being impressed with the remarkable merits of this Peach, THE POMONA NURSERIES purchased the original and only tree, with exclusive privilege of buds, fruits, etc. To assist in its dissemination we have disposed of a part interest to two other nurserymen and will now book orders to be furnished, in rotation, until stock is exhausted.

The **WONDERFUL PEACH** is very large, late, handsome, yellow with red cheek, flesh yellow, quality excellent, and will keep a long time in good condition; a good shipper; free stone; pit small; valuable for canning or preserving; tree a strong, healthy grower and very productive, ripening second week in October.

To protect our customers and the public from being imposed upon, we adopted a "**TRADE MARK LABEL**" as herein represented. One will be attached to each tree, and *none are genuine without it*. The Label should be removed before planting.

Second class and June buds, the latter by mail.....	.75	7.50	50 00

OPINIONS OF SOME LEADING FRUIT MEN.

David Baird, an extensive Peach grower, says: It was large size, fine flavored and very showy.

E. Rue says: Its large size, fine appearance, excellent quality and lateness for ripening will make it a great acquisition to our list of late peaches.

A. J. Caywood, Marlboro, N. Y., says: It is larger than Crawford's late and excellent quality.

Albert Hansell, originator of Hansell and Rancocas Raspberries, says: For its lateness of ripening, size and flavor, it has no superior.

Jno. T. Lovett, Editor "Orchard and Garden" says: In beauty, productiveness and other desirable qualities it transcends all others to such a degree that the word "**wonderful**" unconsciously escapes so many upon seeing it that it became known at once as that "**Wonderful Peach**." Hence that name has been accepted for it, contrary to the wishes of its owners, by the force of circumstances. It is a free stone of the richest golden yellow, largely overspread with vivid carmine, and ripens after nearly all other peaches have disappeared. Its keeping qualities are as remarkable as it is beautiful.

E. Williams, Secretary N. J. State Horticultural Society, says in "Rural New Yorker": Aside from its size, appearance and good quality, I was surprised at its keeping so well. The specimens were sampled freely every day, and the remainder, on Saturday, the last day of the Fair, were still in good condition. The **Wonderful** is a rosy cheeked, yellow skinned, yellow fleshed, free stone Peach of large size and excellent quality.

Having many inquiries for Peach trees by mail, we can only send them that way in dormant and June buds

Should any stock we quote be offered by responsible parties at less rates, for the same grade, we will furnish at the same.

Globe Peach.—Freestone, golden yellow, with red blush. Large size, 12 to 14 inches around in favorable seasons. Quality unsurpassed. In Central Pennsylvania begins to ripen second week in September and lasts till first of October.

RUSSIAN APRICOTS.

The **RUSSIAN Apricot** is claimed to be in every way superior to the American varieties in early bearing and quality of fruit, as well as hardness of trees, and freedom from all disease, worms and insects, that have been so destructive to trees and fruit of the peach and plum. In extremely cold locations, where the mercury falls to 46 deg. below zero, the Russian Apricots have passed through the winter safely, while the Americans by their side have been killed to the ground.

Common sort, 1 year, each, 25 cents; doz., \$2.50.

Carpenter and Gages' Collections.

------------------	-----	--------	---------

Coe's Golden Drop,
Imperial Gage,
Washington,

Jefferson,
Richland,
Green Gage,

German Prune,
Prince Englebert,
Pond's Seedling,

Spaulding Plum. The first of a new race of curculio proof plums. Has never failed to produce a full crop in 20 years. and is so enormously productive as to bend the limbs in a rainbow curve. The curculio has no power over it. Fruit large, yellowish green, with marblings of a deeper green and a delicate white bloom; flesh, pale yellow. exceedingly firm, of sugary sweetness, though sprightly and of great richness. The canned fruit is simply superb and presents a most attractive appearance. The fruit has been selling here for many years at \$1 a peck. Tree as exceptional in its vigor as a Kieffer or LeConte pear. Ripens early; from middle to last of August here. PRICE, 2 years, 75 cents each; \$7.50 per doz.; 1 year, 50 cents; \$5.00 per doz.

Another novelty from Japan is KELSEY'S JAPAN PLUM which has proven hardy with us. It is a good grower and is free from disease in every form; fruit of large size and of finest texture; considered the finest plum grown.

Botan. This is claimed to be the largest of Japan Plums; oblong, tapering like Wild Goose, dark red or purple; flesh

yellow, highly flavored. Ripened last season in New Jersey about August 1st. Tree hardy, handsome grower; free from disease.

Ogon. Also a Japan variety. Hardy, vigorous grower; much the character of Botan. Yellow. Sweet and ripens in July in New Jersey.

Prunus Simoni. (Apricot Plum). This new plum, a native of northern China, is believed to be the most valuable new fruit introduced for many years, being hardy as far north as central Iowa and Nebraska, and in protected situations even farther. Its fruits are very pretty, with a very short stem, size of Orleans Plum, with brick red or dark cinnamon color. The flesh shows a fine apricot yellow, firm and has a peculiar aromatic flavor not found in the plums we cultivate. Price, 30 cents each; \$3.00 per dozen.

PRICES: Kelsey, (Early and Late) Botan, Ogon, Simoni, Shipper's Pride, Robinson, first-class, each 30 cents; doz., \$3.00.

Prunus Pissardi. A new purple-leaved plum from Persia, very ornamental. The fruit is medium sized, nearly round, dark purple, pulpy flesh, very sweet, juicy and good. It is said to be unusually exempt from the attacks of curculio. Price, 25 cents each; \$2.50 per dozen.

KELSEY'S JAPAN PLUM.

ABUNDANCE. (*Description of Introducer.*)

This is a remarkable fruit indeed; both in tree and fruit it is unlike any other Plum. In growth it is so strong and handsome as to render it worthy of being planted as an ornamental tree, equaling in thrift and beauty the Kieffer Pear, which *it even excels* in early and profuse bearing.

Its propensity to early bearing is such that it loads in the nursery row, bending the limbs with weight of fruit until they sometimes break, and this is the case *every year*. The curculio having no effect upon it, the eggs failing to hatch and produce the destructive grub the same as with the Spaulding. The fruit is very large, showy and beautiful. Amber, turning to a rich, bright, cherry color with a decided white bloom and high perfumed. Season early—August. Stone small and parts readily from flesh. Price, \$1.00 each; \$10.00 per doz.

Native Plums.

25 CTS. EACH. RIPENING IN THE ORDER NAMED.

Since it is impossible to grow the more delicate varieties of European Plums in some unfavorable localities, it is gratifying to us to be able to offer to our customers in these sections a succession of native American Plums that can be relied on for certain crops of luscious fruit, all of which are considered Curculio proof.

Mariana Plums. Seedling of Wild Goose; rapid grower, fruit round, large as Wild Goose.

Caddo Chief. "The earliest of all Plums, ripening with Early Richmond Cherry; large, good, firm, bright dark red."

Early Red. Medium size, pink, nearly free, small seed, firm, very fine quality.

Yellow Transparent. Clear yellow, oblong, excellent quality, very productive.

Wild Goose. Large, rich crimson, very productive and profitable.

Forest Garden. Large and good quality.

Indian Chief. Round, bright red, size of Wild Goose, five to six weeks later.

Golden Beauty. Round, large as Wild Goose, rich golden yellow; very firm, small seed, nearly free, excellent in quality, immensely productive, very late and valuable.

The past two summers our Japan Persimmons produced in open field culture, entirely unprotected, large, handsome specimens of fruit, measuring 6 to 9 inches around, which fully matured, and were equal in beauty and lusciousness to the glowing descriptions we have had of them.

JAPANESE SWEET CHESTNUT.

JAPANESE SWEET CHESTNUT.

Of the novelties recently from Japan, nothing is more deserving of cultivation than the Japanese Sweet Chestnut. It is quite distinct from the European varieties, being more hardy, and the fruit of superior flavor and sweetness. The leaf is long and narrow, like a peach leaf, deeply serrated at the edge; comes in bearing very young, the first in this country bearing at four years from the seed; fruit larger than the largest of European sorts, shape, flavor and color like our native. They have grown here at POMONA NURSERIES, the size represented by cut, on trees three years old.

STRAWBERRIES.

We endeavor to handle our plants in the very best manner. They are carefully cleaned, the roots straightened and neatly tied in bunches of fifty each. In furnishing orders we take up the beds solid and the purchaser receives the strongest and best plants made during the season of growth. These are worth much more than plants dug from the alleys, which are the last efforts of the runners, and are apt to be small and weak.

LIDA.

A promising seedling raised from E. W. Durand's large strawberry, the King Cluster, in 1880. It is a pistillate variety, large size, very productive, bright red color, heart shape, regular and uniform in appearance, ripens medium to late, firm in flesh, a good shipper and excellent quality. Producing as many berries as Crescent, and much larger in size.

CRIMSON CLUSTER.

Originated by E. W. Durand, and grown by him a number of years as his best market berry.

The introducer claims that 3,000 plants, set August 15, 1885, produced in 1886, in less than ten months, an average of a quart to the plant; 3,000 quarts from the 3,000 plants, or at the rate of 20 000 quarts per acre. Very large, rich crimson color and excellent quality.

LIDA.

CLUSTER OF BOMBA STRAWBERRY.

A seedling of *Crimson Cluster*, a strong grower, and having a perfect blossom, we claim for it the same advantages over its parent that the Parry has over the Jersey Queen, an abundant crop without the aid of another variety. Strong grower, healthy foliage, fruit large size, firm a good shipper, rich crimson color; flesh, dark red; ripening the earliest among twenty-five varieties. On account of color and firmness, it is especially desirable for preserving and canning, so that one extensive *Conserve Co.* has for the past three years contracted for our crop at prices far above the market rates for the best berries. We have for several years grown the *BOMBA* as our most profitable Strawberry, but at the earnest solicitation of its many admirers, will offer a limited quantity for sale.

PRICE.—\$1.00 per doz, \$4 00 per 100, \$25.00 per 1000.

Jos. T. Lovett, an extensive and successful strawberry grower, says: The *Bomba* received from you Spring, 1886, for testing, passed through the winter remarkably well, and such a yield of beautiful dark colored berries could not be found anywhere in Bucks Co. The yield was enormous. I had some canned and never had any to equal them in that respect. I have been growing strawberries twenty-five years, but have never had anything like the Bomba. Everyone who saw them was pleased with them.

Theo. F. Baker, Ex-President N. J. State Horticultural Society, writes: The *Bomba* Strawberry plants you sent me to test in the Spring of 1885, I am pleased to report most favorably. I have now harvested two crops of fruit from them, grown in matted rows and hill culture. I pronounce them one of the most profitable berries I have to-day among twenty-five varieties. As proof of this I have set but four varieties for next season's fruiting, and Bomba represents one-fourth the quantity.

Bomba is a vigorous grower, foliage good, fruit stems short but stout, berry large to quite large, round, conic, bright dark red in color throughout, texture very firm, quality fair to good. Staminate, and with me ripens ahead of Gypsy, May King or Crescent Seedling, and in yield compares favorably with either. Ripens evenly with no white tip. I consider it a valuable variety.

THE PARRY STRAWBERRY.

AWARDED THE FIRST PREMIUM FOR THREE YEARS at the strawberry fair of the Moorestown Agricultural and Industrial Society, as the best variety on exhibition, and has again surpassed all others, over fifty varieties, at Pomona Nurseries, and received three more first premiums and two more SPECIAL AWARDS at Moorestown, Vineland and New York Strawberry shows. Also the first premium and sweepstake prize over all other new varieties at Providence, R. I.

A seedling of Jersey Queen, produced in 1880, and may be described as follows: Plant vigorous, clean foliage; berries uniformly large in size, obtuse conic, bright, glossy scarlet, firm and of best quality—ripening all over at once; blossoms hermaphrodite or perfect. The Jersey Queen was considered by its originator, E. W. Durand, and by its disseminator, Peter Henderson, and

others, to combine more excellent qualities than any other strawberry. The Parry possesses all the good qualities of the mother parent, Jersey Queen, with the addition of a perfect blossom, ensuring productiveness under all circumstances, and is believed to be a variety of infinite value.

E. S. Carman, in Rural New Yorker, January 30, 1886, writes: "We like the Parry for its large size and symmetry of berry; for its quality and earliness. It gave us the finest early berries last year."

MAMMOUTH.

This we believe to be the largest berry on the market. The introducer exhibited the past summer at Moorestown, N. J., four full quarts, in which there were but fifty berries respectively, as follows: Eleven in the first, twelve in the second, thirteen in the third, and fourteen in the fourth. Some of the berries weighed as much as one and one-quarter ounces each. Rich crimson color, firm and good quality. Plant a strong, vigorous and healthy grower.

Monmouth.—"This berry satisfies a keenly-felt want, namely, a strawberry of the general character of the Crescent, with a perfect flower, and possessing the same everlasting foliage and great productiveness. The Monmouth fills the bill in every respect. In fact it is an improved Crescent, fifty per cent. larger, earlier, firmer, of the same bright, attractive color, and with a perfect blossom. The plant has the healthy, enduring foliage of the Crescent, but excels it in size and thrift, forming larger, stronger plants. This berry has been fruited in different seasons, on different soils, and under different systems of culture, and as it has in-

MAMMOUTH.

MONMOUTH.

variably proved itself superlatively valuable, I am satisfied its character is fixed, and the variety itself one of unusual merit."

PRICE OF STRAWBERRY PLANTS.

We can supply plants during *August at the rate per dozen; during September at dozen and 100 rates; in the Spring, after October 15th and during November, at dozen, 100 and 1,000 rates. No plants furnished at 1,000 rates in the fall, until after October 15th.* The prices herein named are for layer plants. By giving us two weeks' notice, we can furnish pot-grown plants during August, September and October, at additional cost of 25 cents per dozen; \$1.50 per 100

Strawberry plants at the dozen rates will be mailed free; at the 100 rate add 15 cents per 100 to cover postage, packing, &c.

Special prices for large quantities of *Parry*, May King, Sharpless, Albany and others.

Among the best early varieties we would name *Bomba*, *Parry*, Bidwell, Crescent, Old Iron Clad, *Monmouth* and Bubach.

Medium—Lida, Mammoth, Cumberland Triumph, Sharpless, Henderson, Jessie.

Late—Kentucky, Longfellow, Glendale, Mt. Vernon, Manchester, Atlantic, Belmont and *Gandy*.

Gandy's Prize.—Claimed by the originator to be the latest of all strawberries, and the firmest of all large berries. Berries very large, often equaling the Sharpless, bright crimson, of rich, sprightly flavor. Begins ripening several days after Glendale, and holding out long after all others have gone. Plant exceedingly large, stocky, very vigorous and productive.

Jessie.—Plant stout, luxuriant grower, foliage light green, large and clean, with never a trace of rust. The berry is very large, continuing large to the last picking. It is of beautiful color, fine quality, good form, colors even, with no white tips. Very firm."

Belmont.—A large oblong berry, of handsome appearance, dark crimson color, firm and good quality. Plant, strong grower and very productive.

Bubach, No. 5, (P).—Very large, fine color, very productive good quality, ripens early. Strong grower; valuable.

If any stock we quote is offered by responsible parties at less rates, for the same grade, we will furnish at the same.

RASPBERRIES.

GOLDEN QUEEN.

This new Raspberry, introduced by J. T. Lovett, originated on the farm of Ezra Stokes, in Camden Co., New Jersey, and is described by him as an improved Cuthbert, of a beautiful yellow color. He says it may be fittingly described as a variety of six cardinal virtues viz: 1. In flavor it rivals that venerable and highest in quality of all Raspberries, Brinkle's Orange. 2. In beauty it transcends all other raspberries I have ever seen; being of a rich, bright, creamy yellow, imparting to it a most appetizing effect, both in the crate and on the table. 3. In size it challenges the large Cuthbert. 4. In vigor it fully equals its parent (the Cuthbert), and resists heat and drought even better. 5. In productiveness it excels the prolific Cuthbert. 6. In hardiness it has no superior. In past unprecedently severe winters several rows of it stood wholly unprotected at one side of a large field of Cuthberts, all of which were badly killed, while not a branch of the Golden Queen was injured.

MARLBORO RASPBERRY.

The *Marlboro* is claimed to be equal to the Cuthbert in every respect, and two weeks earlier.

Raspberries will be sent by mail at Dozen rates, free of postage; by mail at 100 rates, if 25 cents for 50 plants, or 40 cents for 100 plants be added to the price.

Minnewaski. Large, hardy, very productive; strong grower, free from disease, Early and good quality.

Lucretia Dewberry. Claimed to be the best of the Blackberry family. As hardy as Snyder; as productive as any. The berries are far larger, and incomparably better, than any Blackberry, and of unequalled excellence—soft, sweet and luscious throughout; of brightest, glossy black color. The Lucretia Dewberry has received the endorsement and highest praise from the best horticulturists in the country. Its eminent success in all soils, from Maine to California, from Minnesota to Florida, is something phenomenal in small fruit culture. Its trailing habit renders it less liable to winter-kill.

Eric Blackberry. Claimed to be as hardy as Snyder, as vigorous as Kittatinny; very productive, free from rust or double blossoms, good quality, round in form and as large as Lawton.

Wilson Junior. This new and improved variety, now attracting so much attention, was raised from the seed of selected fruit of the *Old Wilson Early*—the largest, handsomest, best and most profitable blackberry known at the time of its discovery, in or about the year 1854, by John Wilson, of Burlington county, N. J., and produced more bushels and more dollars than any other blackberry sent to New York or Philadelphia in the last quarter century.

Ten per cent. off and no charge for packing when cash is received with the order, except mail packages, on which we prepay postage.

WILSON JR. (Reduced Size)

(Natural Size)

The above cut represents a cluster of WILSON JUNIOR BLACKBERRY, photographed from nature and reduced, one acre of which produced in 1884 $110\frac{1}{2}$ bushels beside Wilson Early, which yielded 53 bushels per acre, and in 1885 the same acre of WILSON JUNIOR produced 163 bushels, and the same Wilson's Early, adjoining, yielded 57 bushels per acre under similar treatment and in equally good condition.

And in 1886 the same acre of Wilson Jr. produced $109\frac{2}{3}$ bushels, while the Wilson Early yielded but 12 bushels per acre. The preceding severe winter almost entirely destroyed the Wilson Early, while the Junior was but slightly injured, it being much hardier than its parent.

GRAPES. **MOORE'S EARLY GRAPE.**

Very early, very large, good quality, hardy and free from mildew. See Description, Page 23.

The new white grape, **NIAGARA**, promises to be the best market grape. As an evidence of our faith we have planted nearly four thousand vines of them, which have yielded handsomely of large beautiful clusters of excellent fruit.

WOODRUFF RED GRAPE.

This very large and handsome grape is a seedling of Concord, originated with C. H. Woodruff, Ann Arbor, Mich., in 1874. The vine is a very strong grower, free from disease, and very hardy, never having been injured by the cold in the slightest, without any protection in winter, though the thermometer has reached 20 degrees below zero very often since its production. Bunch large, shouldered; berry very large and does not drop from stem. Exceedingly showy and has taken first premium over all competing varieties wherever shown. Its large size, both in bunch and berry, bright color and general attractiveness, makes it especially valuable for market, it being sold in the Ann Arbor market for three times what Concorde was selling at.

MOORE'S EARLY

Combines the following desirable qualities: Hardiness, size, beauty, productiveness, earliness, and is entirely exempt from mildew or disease. It originated with J. B. Moore, of Concord, Mass., is one selected out of 2,500 seedlings, and is described as follows; **BUNCH**, large; **BERRY**, round, large, (as large as Wilder) black, with heavy blue bloom; **QUALITY**, *better* than Concord; very early; ripening ten day before the Hartford, and twenty days before Concord; **VINE**, exceedingly hardy; has never been covered in winter, and has been exposed to a temperature of more than twenty degrees below zero without injury. "It first fruited in 1877, and was then exhibited at the Exhibition of the Massachusetts Horticultural Society, since which time it has constantly been before the discriminating Fruit Committee of that renowned society. It has been awarded no less than thirteen First Premiums of the above society, and in the year 1877 was awarded a special premium of sixty dollars. At the winter meeting of the Western New York Horticultural Society, 1878, President Barry named it as the best new sort yet offered.

MOORE'S NEW DIAMOND GRAPE.

This fine new white grape was raised by Dr. Jacob Moore (the originator of the famous **BRIGHTON**) and is a hybrid between the Concord and Iona. The vine, a pure native, is very vigorous, with dark healthy foliage. It has proved very hardy without protection, and is extremely prolific. Bunches large, compact, slightly shouldered; berry, greenish-white, tinged with yellow; about the size of Concord; skin smooth, free from spots or dots. In *quality* it is claimed to be superior to any other white grape of recent introduction.

EATON,

A healthy, vigorous vine, free from mildew, character of Moore's Early and Pocklington. Bunch, very large, compact, often double-shouldered; berries very large, many one inch in diameter, round, black, covered with a heavy blue bloom; adheres firmly to the stem; skin thin, but tough, with no bad taste; pulp large and tender, separating freely from the seeds. Quality equal to or better than Concord. Very valuable.

JEWELL.

Description of Originator: Bunch, medium, often shouldered, compact; berry medium, black, with a heavy, fine bloom, handsome; skin thin, tough; pulp tender, rich, spicy, sprightly and sweet to the centre; seeds few, very small; quality best, pure, equal to Delaware; vine vigorous, hardy and very productive; never known to rot or mildew. Season a week before Victor and of decidedly better quality; will hang on the vine a long time after ripe without wilting.

POCKLINGTON.

"The largest, most showy and most promising among the new white native grapes for market and general use. Vine perfectly hardy and free from mildew."

GRAPES.

HARDY.

Grape Vines will be sent *by Mail* at single and dozen rates, free of postage, at 100 rates. if 30 cents per 50 and 50 cents per 100 plants, be added to the price.

The capitals denote the season of ripening, the small letters the color of the fruit.

Write for special prices on large quantities of grape vines.

In cash orders of \$10.00 or more we will furnish single vines at rate per 100.

Rules for ascertaining the Number of Plants required for One Acre of Land, which contains 43,560 Square Feet.

Multiply the distance in feet between the rows by the distance the plants are apart in the

row, and their product will be the number of square feet for each plant or hill, which divided into the number of feet in an acre, will show how many plants or hills the acre will contain, thus:

Blackberries.....	8 feet by 3= 24	3,560	1,815 plants.
Raspberries.....	7 " 3= 21	"	2,074 "
Strawberries.....	5 " 1= 5	"	8,712 "
Strawberries.....	3 " 16 in. 4	"	10,890 "
Dwarf Pears.....	10 " 10=100	"	450 trees.
Peaches.....	18 " 18=324	"	134 "
Standard Pears and Cherries.....	20 " 20=400	"	108 "
Apples.....	30 " 30=900	"	48 "

And so on for any distance that may be desired to plant.

FOOD CARP.—*Parti Scale.*

The only food fish that can be properly cultivated in inland waters.

Having procured the improved Carp through Prof. S. F. Baird, U. S. Fish Commissioner, from the Government Ponds at Washington, D. C., and had our ponds constructed under the supervision and approved plans of M. P. Pierce, we will furnish young Carp, pure and genuine, for stocking ponds.—*Hybrids are worthless.*

We have a fine supply of this valuable fish, with which every farm should be stocked. Our fish are pure, genuine and unmixed.

PRICE OF FOOD CARP (ALIVE.)

Hatch of present year, for sale in the Fall,	\$7 50 per 100
One year old, for sale Spring or Fall,	10 00 "
Two year old (Breeders)	50 to 75 cts. each

Special rates by the 100 or 1000.

Shipping cans 50 cents to \$3.00 each, or no charge if returned, Express Companies will return free of charge.

WATER LILIES.

For stocking Carp Ponds, not only supply food and protection for the fish but beautify and ornament the pond.

Price— <i>Nymphaea Oderata</i> (Common Pond Lily),	\$ 25	\$2 00
<i>Nelumbium Luteum</i> (American Lotus),	50	5 00
<i>Nelumbium Speciosum</i> (Egyptian Lotus),	50	5 00

VINES AND PLANTS BY MAIL.

We invite special attention to the great accommodations now offered by the Post Office Department of sending by mail, vines, plants, seeding trees and grafts in packages of four pounds or less (peach trees sent by mail in dormant bud and June buds only); so that all who are within reach of the best nurseries, and desiring to get supplied with stock make selection from catalogue of the kinds wanted. Send P. O. Money Order on Moorestown (not Morristown), N. J., or checks or drafts on Philadelphia or New York, or if bank notes are sent the letter should be registered—and the plants will be returned by mail, safely packed in moss and oiled paper.

Strawberry plants at the dozen rate will be mailed free. At the rates per 100, 15 cents additional must be remitted to pay postage. Raspberries, blackberries, gooseberries, currants will be sent by mail post-paid, if 25 cents per 50, or 40 cents per 100 be added to the price; to grape vines add 30 cents per 50, or 50 cents per 100; at the single or dozen rates they will be mailed free.

By the above arrangements, wherever there is a Post Office, parties ordering may be sure of getting a first-class article delivered to them as safely as their letters.

Thus every family throughout the whole country has the opportunity of securing, by a small outlay, a complete and valuable collection of Small Fruits, Trees and Plants.

Reports Concerning Wilson Jr. Blackberry.

In *Orchard and Garden* for October, 1886, J. T. Lovett, states: Wilson Jr. produced some very large berries and fruit in good abundance. Its yield is enormous, and it seems to be hardier (coming through the past severe winters without protection) than the old Wilson. In size of fruit, quality and general appearance of fruit and plant it is very like the old Wilson.

E. S. Carman in *Rural New Yorker* Sept. 11, 1886, states, in giving the prominent points of the different Blackberries: "If you plant the Wilson Jr. you will get more berries perhaps than from any other kind, if the plant will endure your climate. It however is hardier than its parent the Wilson.

Holstein Friesian Cattle.

Several young bulls, cows and heifers; all registered and of best milk and butter strains of Netherland, Aggie and Clothilde families.

Catalogue on application.

WM. PARRY, PARRY, N. J.

The Nursery is located on the branch of the Westfield and Camden Turnpike Road, 2 miles from Riverton, 2½ from Palmyra, 8 from Burlington or Philadelphia. A Steamboat leaves the latter place for Riverton several times daily, and the Cars running between Philadelphia and New York stop at Palmyra or Riverton.

FOR CRATES AND BASKETS,

Address C. PARRY, Parry P. O., New Jersey,

Who is now Manufacturing and offers for Sale the following
Superior Berry Baskets and Crates.

DELAWARE QUARTS^{AND} PATENT CRATES.

We have manufactured and sold the best quality of all the approved berry crates and baskets for many years, and our customers are satisfied with the quality of our goods. We have received many orders for the same, and we are now manufacturing them in large quantities.

They are made of the best material, and are of the best design, and in the best shape for carrying berries. They are the best, look the best, and are the best for the purpose.

The frames are made of the best material, and are of the best design, and in the best shape for carrying berries. They are the best, look the best, and are the best for the purpose.

Manufactured and sold by C. PARRY, Parry P. O., New Jersey.

A NEW ATLAS ENTITLED

Sensible Low-Cost Houses--How to Build Them.

Now ready. Fully illustrated, with plans, and complete descriptions of 56 New, Beautiful and Cheap Country Houses, costing from \$800 to \$7500. Shows how you can build a \$2000 house for \$1750, and how to make them handsome, convenient, healthy, light, cool and airy in summer, warm and comfortable in winter. Tells intelligent builders of homes what to do, and what not to do. Describes houses adapted to all climates. If you intend to build now or in a few years from now, you want this book. Price, \$1.00, by mail, or given free if desired, with an order for \$3.00 from this catalogue, except on "special collections."

MODERN HOMES FOR THE COUNTRY,

A condensed volume containing much information. Fully illustrated with plans and perspective views. Price, 25 cents by mail, or given free, if desired, with an order for \$2.50 from this catalogue, except on the "special collections."

—†—LAWSON—†—

The Largest and most Beautiful Pear, of Good Quality
Ripening in July.

THE Original Tree, one hundred years or more old, has never been affected with blight or other disease, stands healthy and vigorous on the Lawson Estate, and was first disseminated by them in a commercial way, on condition that it be propagated and sold under its true name of Lawson Pear.
