CYCAS REVOLUTA.

(The true long-leaved variety of Sago Palm).

WE are happy to announce that we have just received 10,000 fine chunky stems of the true, long-leaved variety of Cycas, which is much superior to the common form. These plants have been cultivated in Japan for several years, and are the finest lot ever brought to this country. The stems are fresh, and if potted and placed on gentle bottom heat in a greenhouse they will soon make handsome crowns of fine leaves, and thus form grand specimens five times their present value.

We offer same, up to the 1st of June only, at the extraordinary low price for the following sized stems :

Length 3 inches, circumference 6 inches,.....				\$0.25 each
