Roots, : Grafts : and : Cions.

WE OFFER THE FOLLOWING list of root grafts and would call special attention to our apple grafts, which are made by experienced workmen who use six inch cions and number one roots and are careful to make perfect joints. We invite the trade to call on us and see the perfect stands and large growths we get from our grafts.

All orders for grafts must reach us on or before February 1st, 1891, as owing to the high price of stocks we do not care to put up any surplus grafts and run the risk of selling them.

Apple Grafts.

We offer the following list of grafts at the very low price of \$4.00 per 1000, \$35.00 per 10000

Winter.

----- Ben Davis
----- Wine Sap
----- Jonathan

Russian Apricots.

GIBB—Tree hardy and symmetrical. A good bearer. Fruit medium size; color yellow; flavor sub-acid, rich, juicy; season June 20. The best early variety. Ripening with the strawberry, it cannot help proving a valuable acquisition to the list of Northern fruits.

ALEXANDER—Tree hardy. An immense bearer. Fruit large size; color yellow, flecked with red, both skin and flesh; a beauty; flavor sweet, delicious; shrub oblong; Season July 1. One of the very best.

NICHOLAS—Tree hardy. A splendid bearer. Fruit medium to large; color white, flavor sweet, melting; season July 10. A handsome and valuable variety.

ALEXIS—Tree hardy. An abundant bearer. Fruit yellow with red cheeks; size large to very large; flavor slightly acid, rich and luscious; season July 15. A good sort.

CATHARINE—Tree hardy, vigorous and productive. Fruit medium size; color yellow; flavor mild, sub-acid, good; season July 20.

J. L. BUDD—Tree a hardy, strong grower and profuse bearer. Fruit large size; color white with red cheeks, flavor sweet and extra fine with fine sweet kernel, as fine flavored as the almond and used for the same purpose. The best variety and a decided acquisition. Season August 1.

The Acme Apricot.

A new apricot from Northern China which was given to Professor J. L. Rudd by a returned missionary. The tree is an immense grower, very hardy and productive. Fruit the very largest size, a sweet, delicious freestone; yellow with red cheek.

Improved Dwarf Juneberry.

For several years we have been watching the Juneberry and have come to the conclusion that it is one of the most valuable berries, and it should be planted on every farm in the west. The wood is hard and firm and endures the extremes of our climate without injury. Its leaves are dark, glossy green and very much resemble the pear. The plant propagates from suckers. The flowers appear about the same time as the apple. The petals are white and five in number. The fruit is borne in clusters like the currant and ripens in June. It is bluish black when fully ripened. Its flavor approaches the huckleberry, a mild, very rich sub-acid. Most people like its quality and pronounce it delicious. It may be served with sugar and cream or cooked sauce, and is splendid canned for winter use.

New Plums.

BOTAN, OR ABUNDANCE—JAPANESE—The best in leaf and growth of any of the Japanese plums; color bluish red with white bloom, exceedingly sweet, rich, juicy and delicious. Ripens August 1. Hardy where Wild Goose will stand.

OGAN—JAPANESE—Tree hardy. Fruit very large, heart-shaped; color reddish yellow; meaty and excellent. August 1.

PRUNUS SIMONII—APRICOT PLUM—This new plum, a native Northern China, is believed to be the most valuable new fruit introduced for many years, being hardy as far north as Central Iowa and Nebraska, and in protected situations even farther. It will ripen about the first of July in this latitude and shows no defects from attacks of curculio. It is very firm and meaty, and equal in flavor to any of the blue plums. It will carry any desired distance. Tree very thrifty, upright, an early and abundant bearer, stands drouth well and succeeds well in the Southern states.

POTTAWATTAMIE—A plum of the Chickasaw family, but quite distinct from any other variety. Perfectly hardy and immense early annual bearer. Four year old trees are said to have borne a crop of two bushels to the tree. Fruit is yellow, overspread with a bright pink and prominent white dots; flesh beautiful golden yellow, luscious, good. Ripens in July. The sting of the curculio does not seem to effect the fruit, as every plum ripens evenly and perfectly. It is a good early plum, and cannot be surpassed for canning.

SATSUMA, OR BLOOD PLUM—JAPANESE—Large, skin dark purple and red, with blue bloom. Globular, with sharp point. Flesh firm, juicy, dark red or blood color, well flavored, good; pit small. Ripens about three weeks before Kelsey. Tree very vigorous, and hardy as Wild Goose. Will, we think, prove a most valuable plum.

For prices see general list.
