CATALOGUE

OF THE

B O O K S

IN THE

DEPARTMENT OF ZOOLOGY

(BRITISH MUSEUM, NATURAL HISTORY).

1st copy

THIRD EDITION.

PRINTED BY ORDER OF THE TRUSTEES.

1884.

PRINTED BY TAYLOR AND FRANCIS,
RED LION COURT, FLEET STREET.

(TO FIRST EDITION.)

THE Library of the Zoological Department consists, 1st, of works acquired from the small annual grants or by means of exchange for the publications of the Department; 2nd, of books received as donations; and, 3rd, of the purely zoological works which were purchased out of the extraordinary grant made in the last financial year (1879-80). All these works are enumerated in the present List.

Separate copies of memoirs and papers published in periodicals or other mixed publications have only been admitted under distinct titles when they have been brought into the book-market, many Academies and Societies publishing and selling their memoirs separately; but the separate copies of papers, of which a small number has been printed for the authors for private distribution, are not included.

The Zoological Library is especially poor in old works; it contains only 70 of a date earlier than the year 1801.

As this List has been printed chiefly with the view of serving as a temporary guide in making additions to the Zoological Library, and of preventing the acquisition of duplicates for the General Natural History Library, no bibliographical completeness of the titles has been attempted; on the contrary, the titles have been as much abridged as seemed to be consistent with the recognition of the works catalogued.

ALBERT GÜNTHER.

British Museum,
Nov. 26, 1880.

(TO SECOND EDITION.)

IN the present second issue of the 'Catalogue of Books in the Department of Zoology,' the works acquired between November 26, 1880, and May 1, 1882, have been inserted. It contains 2638 titles as against 1700 of the first issue, beside 92 titles of works which belonged to the Zoological Department and have been transferred to the General Library: these are enumerated at the end of this Catalogue.

ALBERT GÜNTHER.

British Museum,
May 1882.

SINCE the issue of the second edition of this Catalogue the number of works in the Department has been nearly doubled. This part of the Natural History Library contains now 5309 works, represented by 8586 volumes. Beside the main titles of these works, 823 cross-references have been inserted in the present edition.

Care having been taken to collect in the first instance those works which are most frequently required for the arrangement and study of the collections, the Departmental Library, combined with the General Library, fairly fulfils its primary object. But it is still far from being complete, and, as many of the works which are out of print, are very scarce, some difficulty is experienced in obtaining suitable copies. It is hoped, however, that in the course of two or three years, the library will have sufficiently advanced towards completeness to allow of the Alphabetical List, which is the most convenient during the progress of the formation of a Library, being superseded by a systematically-arranged Catalogue.

This third edition has been prepared by Mr. J. E. Harting, F.L.S.
