The Jackson Wonder Lima Bean. The Jackson Snow White Pea.

The 1892 crop of this bean is now ready for dissemination. We first introduced this bean last season, and in our circular describing it we said, "we have in the Jackson Wonder Bean a most useful, valuable and timely acquisition to our food crops, both for man and beast." We sold thousands of packets of them during the season, the result of which fully confirms our statement. We now have every reason to believe they have come to stay as a standard, desirable and useful crop for garden as well as field. Mr. Thomas A. Jackson, the originator and grower, is highly elated over the favor this bean has received the past season.

DESCRIPTION:

The Jackson Wonder Bean is Dwarf, or Bunch, requiring no poles. It grows from 18 inches to 30 inches high, and might be termed a combination bean, as the pods when quite young may be used as snap beans and, after they become filled, shell and use as Lima Beans, or the whole plant, when loaded with foliage and beans, may be gathered and used for ensilage

THE JACKSON WONDER BEAN.

WEEVIL PROOF.

Owing to the peculiar structure of the bloom of this plant it cannot be fertilized or hybridized with any other plant, therefore the weevil germ cannot be deposited in the bean when young, neither can or will the weevil eat it when dry, hence it is weevil proof, which fact alone is a wonderful feature in its favor.

CAUTION! Other beans, such as the old spotted Lima, etc., are being offered as identical with the Jackson Wonder. The true prolific stock can only be had of us. All others are waxy and none but Jackson's Wonder can be used as snaps when young.

RETAIL PRICES FOR 1892 AND 1893.--By Mail, Postage Prepaid.

Per packet of two dozen Beans, 10 cents, 3 packets for 25 cents. Directions for planting on each packet.

Jackson's Snow White Pea.

Next to Jackson's Wonder Bean, this is the prettiest, nicest and most delicious novelty yet offered the public. As the name indicates it is perfectly white all over, even the eye, which in most peas is colored, is white. It is very productive and easily produced on any soil, not too rich. It is very early—two crops can easily be produced same year on same ground. It requires no poles but will do better with a stalk of some short growing corn to each vine. For table use the Jackson Snow White Pea is superb and unsurpassed if equalled, by any pea ever offered; eaten when shelled, either green or dry. Used dry during the winter, it excels the famous Navy Bean which it very much resembles in appearance and size, the only difference being that one is a pea, the other is a bean. The Jackson Snow White Pea is a wonderful vine producer, therefore Mr. Jackson predicts it will supercede the famous Southern Field Peas for enriching the soil, and as an Ensilage Crop. The Clay Pea will be no longer needed on the Louisiana Sugar Cane Plantation after the South American Snow White is well introduced.

PRICES OF JACKSON'S SNOW WHITE PEAS

WITH DIRECTIONS FOR PLANTING ON EACH PACKET.

Per Packet of 90 to 100 Peas, by mail, 20 cts.

TESTIMONIALS.

From Hon. R. T. Nesbitt, Commissioner of Agriculture and Hon. John O. Waddell, President Ga. Agricultural Society.

ATLANTA, GA., Aug. 8th, 1892.

To Whom it May Concern:

We take pleasure in commending "Jackson's Wonder Bean," and the "South American Snow White Pea" to the Farmers, Truck Growers and Market Gardeners of Georgia.

The "Wonder Bean" is of the Lima or Butter Bean family, is a wonderful continuous bearer and of a bunch variety. The Pea is also of a bunch variety; a most prolific bearer and superior as a table pea.

JOHN O. WADDELL, Pres. State A. Society.
R. T. NESBITT, Commissioner.

From Gov. Wm. J. Northen, of Georgia.

ATLANTA, GA., Aug. 8th, 1892.

I have been quite pleased with the above named Bean and Pea.

W. J. NORTHEN.

I planted 4 doz. seeds of Jackson's Wonder Bean and find the yield enormous, quality fine and the growth exceedingly vigorous.

J. W. WOOD.

MARK W. JOHNSON SEED CO., ATLANTA, GA.:

Dear Sir:—Yours requesting my "full opinion of the Jackson Wonder Bean" received. In reply I would say that it is entirely different from any bean I have seen. It is more prolific, yielding enormous crops. It is less dependent on rain, growing about as well in dry as wet weather. It meets a felt want, in that it requires no sticking. It is a bush bean. It is superior as a table bean to any I have ever tasted, whether taken green or dry. It is a very early bean, raising two crops in a season. It is not waxy and hence cooks easily and quickly. It seems to fill every requirement for the best of garden beans. As a forage plant, it will yield an enormous crop of ensilage or dry forage. It is an invaluable acquisition.

Yours truly,

JAS. B. HUNNICUTT,
Professor of Agriculture, University of Georgia.

ATLANTA, GA., Aug. 2d, 1892.

I have raised what is known as the Jackson Wonder Bunch Butter Bean the present year. I must admit that it is the finest flavored bean that I ever ate, and the most prolific that I have ever seen.

T. C. BATTLE.

ADDRESS ALL ORDERS TO

MARK W. JOHNSON SEED CO.,

ATLANTA, GA., U. S. A.

P. S.—One Peck of Beans contains over 500 Packets; one Peck of the Peas contains over 300 Packets; one Peck of the Beans will plant one acre; one Peck of the Peas will plant two and a half acres.
