" Plumieri..... " 75	Bamboos and Grasses same as in '92.

New and Rare Varieties.

NYMPHAEA GRACILIS (TENDER).

THE STAR WATER LILY.

The habit of this species is similar to that of the blue and purple lilies, except that the flowers stand about 15 inches above the water. They are 6 inches across, and pure white, with deep yellow stamens. The somewhat narrow petals form a beautiful star-shaped flower. It is a day bloomer, very novel and distinct. Tubers or plants, \$2 each. Seed, per packet, 50 cents.

NYMPHAEA MEXICANA.

This is nearly a precise counterpart of the well-known *Nymphaea Flava*. The latter is a shy bloomer. *N. Mexicana* produces its bright, golden yellow flowers in profusion throughout the entire season. The fragrance is like that of the Locust Tree blossom. 75 cents each.

New Hardy Water Lilies.

NYMPHAEA LAYDEKERI ROSEA.

Flowers about one-third larger than *N. Pygmæa*, delicate flesh color on first opening, changing to very bright rose carmine; stamens orange red. Blooms profusely the entire season. One of the most charming varieties ever introduced. \$5 each.

NYMPHAEA PYGMÆA HELVOLA.

Foliage spotted with reddish brown, flowers pale yellow, somewhat larger than *N. Pygmæa*, and produced freely. \$1.50 each.

NYMPHAEA MARLIACEA ALBIDA.

This grand variety belongs to the same class as *N. Candidissima*, and bears magnificent pearly white flowers, sometimes 7 to 8 inches across. Blooms both early and late. \$2.50 each.

NYMPHAEA MARLIACEA CARNEA.

Plant of the *N. Candidissima* type, producing large, fragrant flowers of a delicate flesh color—a most exquisite shade. Very desirable. \$2.50 each.

NYMPHAEA MARLIACEA ROSEA.

Another grand variety of the *N. Candidissima* type, with large flowers of the deep, rich pink color and delicious fragrance of the *N. Odorata Rosea*. A great acquisition. All the *Marliacea* hybrids bloom much later in the Autumn than the common *Nymphaea Odorata*. \$4 each.

NYMPHAEA ODORATA SULPHUREA.

A hybrid variety, with superb, fragrant flowers of a bright yellow color standing 6 or 8 inches out of the water. Foliage maculated with rich brown. Plant a vigorous grower and free bloomer. \$1.00 each.

NYMPHAEA ODORATA EXQUISITA.

The brightest colored of all the "Odorata" varieties. Flowers of a bright rose carmine, a deeper shade than the Cape Cod Lily. Very fragrant. \$2 each.

NYMPHAEA ODORATA SUPERBA.

A variety of the common Water Lily, with large flowers of exquisite form, having very broad petals so numerous as to make it semi-double. 75 cents each.

NYMPHAEA ODORATA GIGANTEA.

This is a native of Florida, and said to be "a gigantic form of the common White Water Lily." Our own opinion is, that it is a distinct species. It is a very strong growing plant, with very large white flowers of beautiful form. Very desirable. 25 cents each.

NYMPHAEA ODORATA CAROLINENSIS.

A superb variety which originated with H. T. Bahnson, M. D., of North Carolina. \$2.50 each.

"Flower of a delicate shade of pink, deepening to the center, the golden stamens reflecting a lovely salmon tint."—*Wm. Tricker.*

CABOMBA VIRIDIFOLIA.

This is the correct name of the plant which is described on page 29 of catalogue under the name of "Water Ranunculus." 25 cents each.

CABOMBA ROSAEFOLIA.

A new species, forming at the ends of the shoots rosettes about 3 inches across of a most brilliant pink color, resembling a Hermosa Rose in full bloom under water. The most charming and wonderful aquarium plant ever introduced. Price, 50 cents.

SCHUBERTIA GRANDIFLORA.

A grand new climber which can be planted in the garden during summer and wintered in a greenhouse, flowers resembling the Stephanotis (white). Very fragrant and produced freely in large clusters all summer. 50 cents each.

PARADISE FISH.

The Paradise Fish is something entirely new, for aquarium purposes only. The male is one of the most brilliantly-colored fish known, possessing almost every tint of the rainbow. Its shape is something like a common sunfish, but its caudal fin is much larger and broader. During excitement the tail is expanded and assumes something of the colors and brilliancy of the peacock. The sides of the body have blue vertical stripes. On different parts of the fish may be found the following colors: Blue, crimson, yellow, red, black, gray, green, and brown. When full-grown it measures only $3\frac{1}{2}$ inches in length. The female fish is not so brilliantly colored. They are cared for and fed in the same manner as goldfish, except that during winter the water must not fall below 55 degrees Fahrenheit.

Price for breeders, \$2.50 per pair. Pail for shipping, 25 cents extra.
