INDIAN CHIEF. The largest Tulip extant, Indian Chief is coppery red showing a faint sheen of purple. This variety, as do all of the larger growing sorts of Tulips, much prefers a stiff clay soil that has been well fertilized since the past spring with a liberal addition of bone meal at planting time, followed by periodical applications of plant food, high in phosphoric acid after the foliage has shown in the spring. 3 bulbs, 35c; 6 for $1.15; 25 for $2.00; 100 for $7.35.

LOUIS XIV. Purple, flushed golden bronze, large, globular form. This stately Tulip expresses much beauty and dignity. 3 bulbs, 35c; 6 for $1.20; 25 for $2.15; 100 for $7.65.

TULIP FORCING

Use a 5-inch pot for 3 to 5 bulbs; a 6-inch pot for 5 to 6 bulbs, or an 8-inch pot for 8 to 10 bulbs.

Average garden soil mixed with leaf-mold or thoroughly rotted cow manure is well adapted to Tulip forcing. If mixture is not friable, add sand. Plant September to November for succession of bloom.

Place coarse material, such as broken pots or gravel in the bottom of the pots to insure ample drainage, then fill pots about three-fourths full of soil. Do not pack. Place bulbs and press down till the tops are about three-fourths of an inch below the top level of the pot, finish filling with soil and work firmly around bulbs. The top of bulbs should be covered. When planting has been completed, enough space should remain between the soil and top of pot for watering. Water thoroughly. At least six weeks should elapse before the bulbs are ready to be taken indoors. The pots should be stored in a cold frame, underneath shrubbery or beside a wall and covered with straw or similar material to a depth of 6 to 8 inches. If stored outside, rain will generally keep the soil moist. Care should be taken to see that it does not become dry. As soon as good root systems have developed and the tops show color they are ready to be carried indoors. Place pots in a cool room for several days, later transferring them to temperature of about 65° F. Keep water on heating units and elsewhere to maintain humidity. Prevent freezing.

High and fluctuating temperatures, dry air, insufficient light and too much or too little water are detrimental. Avoid strong sunlight. A light, airy, humid room with a mild temperature should prove ideal.

Carefully kept notes as to date planted, soil used, length of rooting period, temperature, etc., will be of value in future plantings.
