* (BRACY'S) * POTATO * MANUAL

. . . 1894 . . .

Choice Seed Potatoes a Specialty.

*BUY SEED DIRECT FROM THE GROWER. My Seed is all Northern
Grown and True to Name. Advantages of Changing Seed.*

There is no other crop that we raise that is so much benefitted by the introduction of fresh seed from time to time as the potato. They seem to take on new life and prosper wonderfully, provided the change is to well selected stock. Hundreds of my customers will not plant their own raising of seed at all, but buy of me every year. They can grow nearly double the crop on the same land that they can from their own raising, and the tubers are smoother, handsomer and of better quality and therefore more salable in the markets.

CATALOGUE FREE

PLEASE ORDER EARLY IF POSSIBLE. ON RECEIPT OF CATALOGUE—THAT
THERE MAY BE NO DELAY IN SENDING YOU WHAT YOU DESIRE.
MONEY MUST ACCOMPANY ORDERS TO SECURE ATTENTION.

E. M. BRACY,

POTATO SEED.

A famous potato grower, the originator of the Stanley and many other fine new sorts, has carefully hybridized and saved for me a quantity of seed from extra choice new varieties. Those who have a fancy for producing new varieties from seed will do well to try this carefully selected and hybridized strain. Some splendid varieties are sure to be produced from it. Per pk. 25c., postpaid.

The RURAL NEW YORKER,

The Leading Horticultural Paper.

ISSUED WEEKLY.

\$1.00 per Year.

TO MY PATRONS—✧

ON each succeeding spring since 1883 I have issued a catalogue of my seed potatoes, and this year address the public on this subject with feelings of gratitude for the favor with which my potatoes have been received and for the generous patronage of those who desire to grow a produce from the very best seed. My many years experience and careful attention to the growing of this seed has enabled me to bring a large number of choice varieties to the highest point of perfection.

In the Agricultural building of the World's Columbian Exposition, last year, there was the most remarkable exhibit of potatoes ever known to the world. In this exhibition St. Lawrence county took the lead. Of the St. Lawrence county exhibition I am proud to say fifty samples of my best varieties formed a part and received an award from the Exposition, which will be followed by a medal, when those interesting souvenirs and emblems of successful competition have been finished by the Treasury Department at Washington. The Superintendent of the Vegetable Department, in a personal letter to me, says: "Your potatoes are making an attractive exhibit. We have about six hundred exhibits and the most wonderful show on the grounds."

In this catalogue I give descriptions of thirty of the fifty varieties which took the medal at Chicago, and offer seed from them to purchasers. The greatest care is taken to offer only the most perfect specimens for sale, and anyone purchasing may be sure of the highest class seed, and that which will produce the most profitable yield and the most profitable potatoes.

Awaiting your favors, which shall have prompt and careful attention,

I am, very respectfully yours,

E. M. BRACY,

Ogdensburg, St. Lawrence County, N. Y.

Colborne's Sure Cure

IS THE BEST THING I EVER SAW.

HOW QUICK IT CURED ME!

TRY IT.

OGDENSBURG, N. Y., March 6, 1894.

We take pleasure in calling your attention to the fact that the time is not far distant when the people will demand a remedy for the ills and aches and pains of the hot season of the year, and as the season advances the ailing will increase—ailings such as cholera, diarrhoea, cholera infantum, aches and pains in stomach and bowels, burning or nauseous feeling in stomach, bloody dysentery and chronic diarrhoea, of which B. Colborne's Sure Cure is emphatically what is needed in each and every case above mentioned, and is pleasant to take and can be given to infants two weeks old with all safety and is not binding nor griping, but heals the parts affected, and puts the bowels in their natural condition. Colborne's Sure Cure is compounded of roots and herbs of which every ingredient is beneficial to the system. It contains nothing hurtful to the youngest infant. It collects impurities and carries them off leaving the bowels in a healthy state, and soothes and quiets the nerves. In cases of typhoid fever it is conceded that the danger is in ulcerating of the bowels and passing blood occasionally. The result is fatal. Colborne's Sure Cure, given in occasional doses of one teaspoonful at a time, preserves the bowels without conflicting with the physicians' medicine. In cholera infantum with infants, Colborne's Sure Cure has proved itself a blessing to mother and child. Read the testimonials below and be convinced that Colborne's Sure Cure is the only remedy for the above ailments. It is worth its weight in gold. For burns and scalds Colborne's Sure Cure is a great reliever of pain and a radical cure. Saturate a cloth and bind on parts burned or scalded, and apply the remedy freely. Also for frost bites use same application—using the Sure Cure freely. The cure will be speedy.

Try it and be convinced for yourself. For sale at druggists and groceries. Popular price, 25 cts. Sample bottle, 10 cts. Prepared by B. Colborne & Co., Ogdensburg, N. Y. Direct all orders to

B. COLBORNE & CO.,

33 Ford Street, Ogdensburg, N. Y.

A FEW TESTIMONIALS.

I have used Colborne's medicine in my family, and I can safely recommend it above anything else that we have ever used.

Yours respectfully,

J. B. BERGERON.

OGDENSBURG, March, 1894.

We have used Colborne's Sure Cure for diarrhoea for our little boy three weeks old when he was expected to die, and he was cured by two half teaspoonfuls. Also I have lately used the same for foul stomach and found relief at once.

JOHN LINCOLN.

Last summer, having an infant which was teething in the hot weather, it was extremely bad with diarrhoea. Having tried different medicines, which did no good, I procured some of the Sure Cure and gave two doses, in one-half teaspoonfuls, which effectually cured it. While using this Sure Cure a lady called on me, and during our conversation I incidentally mentioned what the Sure Cure had done for my baby. Three days afterwards the lady was attacked with bloody diarrhoea, and having tried different medicines, including physicians' medicines, and getting worse instead of better, remembering our conversation, sent for some. Three teaspoonfuls taken during the day checked it completely. I would not be without the Sure Cure for twice its cost.

MRS. NOLAN,

350 Gilmore St., Ottawa, Canada.

CATALOGUE.

BRACY'S OSWEGATCHIE SEEDLING.—Many people prefer a round, oblong potato and will not buy a long or kidney-shaped sort, claiming that the round, oblong varieties are invariably the best quality. To such we recommend this new sort. The vines are vigorous, spreading and seem to be peculiarly exempt from blight. The potato is of a very productive capacity in the hill, and in great abundance. They are medium to large, round, oblong, solid, with few eyes, and these are quite shallow. The skin is very white and smooth, and this, with its fine shape, make it one of the handsomest potatoes grown. The flesh cooks very white and is of the very best quality, and is one of the best keepers, and cooks dry and mealy. From seed of Wall's Orange. For price see page 8.

EXTRA EARLY SIX WEEKS.—A new extra early potato. It grows to large medium size; oblong to round in shape; skin light pink; flesh white; shape smooth; eyes near surface; tubers close together in the hill. The potatoes begin to form when the vines are very small and grow so rapidly that, under favorable circumstances, they are as large as hens' eggs, and therefore fit for family use *in six weeks from time of planting*. The vines are very healthy, and being also very early, they are not injured so much by the potato bug as most sorts. Pk. 75c., bu. \$2.50, bbl. \$6.00.

BRACY'S VIGILANT SEEDLING—Is a handsome, white-skinned potato; shape round and oblong; shallow eyes; remarkably white and floury when cooked. Productive and in every way a first-class table and market potato. Their fine, smooth, clear skin and uniform size make them very attractive. Seedling from the Jersey Blue, send out this spring. For price see page 8.

Every farmer and gardener should at least try one pound of this new variety.

THE EARLY HARVEST—Originated in the Kenduskeag Valley, Maine, a seedling of the early Sebec. It is a luxuriant grower, with ample light green foliage and white flower, and is a large cropper. The tubers grow close together in the hill, are large size, nearly pure white; eyes only slightly indented; quality excellent. A first-class early potato of great promise. 1 lbs. 65c., peck \$1.50.

ALEXANDER'S PROLIFIC POTATO.—A splendid cropper; medium late; vines unusually healthy and vigorous; potatoes of large size and excellent for quality; eyes near the surface. A white-skinned, white-fleshed variety. From six hills I raised 27 lbs. It is worth the attention of every potato grower. Pk. 75c., bu. \$2.00, bbl. \$5.00.

BRACY'S NORTHERN STAR SEEDLING.—In color the Northern Star Seedling is light red or pink; in shape oval; eyes slightly depressed, yields well, of uniformly large and handsome tubers. Potato growers should give it a trial. The supply is limited. From seed of Wall's Orange. This excellent variety introduced by me last year has proven all we expected of it in spite of a very disastrous potato season. See page 8 for price.

BRACY'S NEW COLUMBUS.—An oval shape, similar in form to the Clark No. 1; the flesh is white, fine grained. Either baked or boiled they are very superior, and cook evenly, dry and mealy. Vines are medium size with deep green foliage, and healthy in all respects. The tubers grow compact in the hill and are easily dug. They are very productive, with but few small tubers. Its beautiful appearance, fine quality, extraordinary productiveness and remarkable keeping qualities render it a most valuable variety for market. This year it has resisted the blight better than any of the other varieties. Worth the attention of every potato grower. From seed of Wall's Orange. See page 8 for price.

THE FREEMAN.—A new extra early potato that has been widely advertised and given general satisfaction. Its eating qualities are the best, being fully equal to the old Snowflake. Pk. \$1.00, $\frac{1}{2}$ bu. \$1.25, bu. \$2.00, bbl. \$5.50.

THE EARLY NORTHER.—From Maine Seedling from Early Rose, is a strong, vigorous grower for an early variety, making large, bushy, medium upright tops, that withstand all forms of disease better than most other kinds. It has medium size, dark green leaves, finely serrated at the edges all around, and it flowers quite abundantly. pure white with yellow center. This new seedling is every way calculated to take the value of the Early Rose both in the field and in the market. Pk. 75c., bu. \$2.50, bbl. \$5.50.

BRACY'S SUPERIOR.—Of medium size; pure white skin; round or nearly so in shape; flesh remarkably pure white; as dry and floury as one could desire. It is an early sort, but a splendid new kind to raise for family use. Pk. 75c., bu. \$2.50.

CHAUTAUQUA No. 1.—This is a new variety of some promise, belongs to the Snowflake class, and is quite early, a good yielder, and of fine quality. Pk. 60c., bu. \$1.75, bbl. \$4.25.

EARLY VAUGHAN.—Flesh is very white and of a delicate rich flavor. In handling them they have a peculiar velvety feeling to the hand, that is marked and distinct from any other variety. It ripens with the Early Puritan, and like it the tubers, when less than half-grown, are dry and fit for table use. Half pk. 45c., pk. 75c., bu. \$2.25, bbl. \$5.00.

EARLY PURITAN.—This is a first-class early potato. It is white-skinned and oblong-round in shape. It proves with us a very heavy cropper. Pk. 60c., bu. \$1.75, bbl. \$4.25.

THE NEW QUEEN.—To put the whole matter in a single sentence, the New Queen is a very early potato, a good cropper of large

tubers that are remarkably and exceptionally handsome, and of a quality that is unsurpassed. Pk. 60c., bu. \$1.75, bbl. \$4.25.

THE POLARIS.—We can highly recommend this new Vermont seedling for earliness, yield and quality. White skin; grain fine; quality excellent. Pk. 60c., bu. \$1.75, bbl. \$4.25.

RURAL NEW YORKER No. 2.—This is the nearest to perfection of any potato yet introduced, and exceeds all others in yield. Sure to give satisfaction. Very large and unusually smooth, with few and shallow eyes: in form oblong, inclined to round; flesh white and of superior quality; medium in season: I have grown it for four years. In my Seed Potato Exhibit at the World's Fair this variety seemed to attract more attention than any other. All who were familiar with it, and there were many, spoke of it in the highest terms. Pk. 60c., bu. \$1.75, bbl. \$4.25.

BONNEL'S ACME.—This is a cross of White Star and State of Maine. Shape, beautiful oval-oblong, white skin, and large but even size. Will recommend it everywhere. Flesh white, fine grained, cooks dry and mealy, and is of superior quality. Pk. 75c., bu. \$2.00, bbl. \$5.00.

BURPEE'S SUPERIOR (New)—Claimed by Mr. Burpee to be superior in yield, superior in quality to all other potatoes for a main crop potato. Pk. 60c., bu. \$1.75, bbl. \$4.25.

HARBINGER (New)—Noted for immense yield, great hardiness, freedom from rot, beauty and fine quality. Pk. 60c., bu. \$1.75, bbl. \$4.25.

AMERICAN WONDER.—The tubers are white, large and uniform in size; elongated, slightly compressed: with few eyes that are nearly flush with the surface. In quality nothing can surpass this superb variety: either baked or boiled, it is dry and floury, and has the rich, sweet flavor that is so marked in the Snowflake. Pk. 75c., bu. \$2.00, bbl. \$5.00.

BRACY'S RISING SUN.—This splendid new potato has proved to be the largest yielding early sort ever grown, and it would be hard work to find a better one. It resembles the Early Rose, but grows to a larger size, and is more productive than any of the early sorts that belong to the Rose family. It is of excellent quality and very early. It should have a careful trial by all who wish for a new variety that will take the place of the Early Rose in our markets at the rate of 450 bushels to the acre. Pk. 75c., bu. \$2.50.

BEN HARRISON.—This medium late variety has proved a great favorite wherever tried, of good table qualities, handsome in appearance, free from rot and never hollow, skin white, and flesh whitest of any variety. For the table it cooks like a ball of flour; it ripens in August and is very productive. Pk. 60c., bu. \$1.75, bbl. \$4.25.

BROWNELL'S WINNER—The vines are strong and healthy, and well calculated to resist the potato beetle. The tubers grow large,

long, oval, slightly flattened, are very smooth and handsome, with few eyes. The tubers grow compact on the hills with few small ones. The color is light rose pink; it matures medium late and is a great producer. Pk. 60c., bu. \$1.75, bbl. \$4.25.

GREEN MOUNTAIN.—A remarkable cropper. Intermediate late, good size, fine form, white, good cooker, good keeper, and an excellent market sort. Pk. 60c., bu. \$1.75, bbl. \$4.25.

SNOW QUEEN.—One of Alexander's best; a little later than the Rose; flesh white; a strong grower and a late keeper. Pk. 75c., bu. \$2.00, bbl. \$5.00.

GEN. LOGAN.—A large round potato, purple, splashed with white; a strong grower and excellent in yield and quality. Pk. 60c., bu. \$1.75, bbl. \$4.25.

THE DELAWARE.—Medium early, large, above the average: the skin and flesh are white; in yield it is a remarkable cropper; while in quality it is first rate, being dry and mealy. Pk. 60c., bu. \$1.75, bbl. \$4.25.

WORLD'S FAIR POTATO.—A new potato which we believe is of great value for general use. It is a first quality, strong growing, very prolific, main crop variety. Tubers are smooth, eyes so nearly even with the surface as to be almost imperceptible; perfectly symmetrical in form and outline; skin yellowish white, well covered with netting; flesh pure white, fine grained and mealy. Vines grow very thick and strong, but not scraggy; small, light green leaves forming a bushy top; tubers grow very compact in the hill and near the surface. $\frac{1}{2}$ pk. \$1.00, pk. 1.25, bu. \$3.50, bbl. \$7.50.

THE STANLEY POTATO.—This is a seedling of the Early Rose and resembles its parent very much. It will yield twice the quantity of the Rose. It is six days earlier. It will not blight or decay. It throws out a strong stock. Its quality cannot be excelled by any now in cultivation. It is very smooth and good shape, with the eyes nearly even with the surface. It is an excellent keeper and retains all its good qualities throughout the season. 4 tubers for 60c., by mail pp., 12 tubers for \$1.50 by mail pp., 100 tubers for \$4.00 by express.

BURPEE'S EXTRA EARLY.—Ten days earlier than Early Rose. The potatoes are uniformly of good size, entirely free from rough or scaly tubers, with very few small ones; oblong in shape, very smooth, eyes set well on the surface, skin creamy white, slightly shaded with pink; the flesh is pure white, remarkably fine-grained, and of the very best quality. Grows very compact in the hill, with strong and vigorous foliage of dark green; is a sure cropper, immensely productive. Pk. 60c., bu. \$1.75, bbl. \$4.50.

We book orders at any time, and fill them in rotation just as soon, in our judgment, as the weather will permit. However, we cannot become responsible for changes in the weather by which they may become damaged en route. We will ship at any time when requested to

do so, regardless of the weather, but customers in this case must take the risk. *When ordering late* please state whether we shall return the money or send some other good kind of equal value, providing we cannot supply the sort you order. All transportation charges must be paid by the buyer. State how to send, freight or express.

I make a specialty of sending Potato Eyes by mail, which enables my customers in the far West or South to get a start with any new variety at a very small cost. I pack the eyes in damp moss very carefully, and distinctly label each kind, and guarantee them to arrive in perfect condition. Sixty eyes of any variety for \$1.00.

Send money by express, post office order, or registered letter to my address, Ogdensburg, N. Y. Write your name, post office, county and state plainly. No goods sent C. O. D.

TESTIMONIALS.

N. E. A. SMITHERS, of St. Lawrence County, N. Y., writes :

E. M. BRACY, Dear Sir—Your letter of recent date to hand requesting me to state what success I had with the following different varieties of potatoes I got from you in the spring of 1893, viz. Burpee's Superior, Thorburn, Bracy's Rising Sun, No. 888. Will state in conclusion that they all proved to be splendid yielders, more particular the Rising Sun, but I have yet to learn of that variety of potato that can excel your No. 888 for table use.

LEONARD LAWRENCE, of St. Lawrence County, N. Y., writes :

E. M. BRACY, Dear Sir—I received your note of Dec. 8th requesting me to make a report of the potatoes I bought of you last spring. No. 888 done very fair for the chance they had. From 12 lbs. planting I raised 3½ bushels. They were planted about the 19th of May on poor ground. Sunlit Star, planted the same time, did very well. From 12 lbs. I had three bushels nice potatoes. Bracy's Rising Sun is a very fine potato—4 bushels from 12 lbs. planting. Harbinger is a fine potato, a good yielder and good cooking potato. Three bushels from 13 lbs. planting. Early Vaughan is a good cooking potato. Two and one-half bushels from 12 lbs. planting.

CHAS. H. SABIN, of Franklin County, N. Y., writes :

Dear Sir—Your seed potatoes, Burpee's Extra Early, yielded me 6½ bushels sound potatoes, which I consider a good yield, and can recommend as a good early variety.

W. J. POTTER, of Warren County, N. Y., writes :

The one barrel of Rural New Yorker No. 2 which I got from you in the spring yielded me about 100 bushels; also the Rising Sun, from two tubers, I got 42 lbs., eating quality good, which proved to be the second best of 40 varieties. World's Fair are a very handsome tuber; from 1 lb. I got 40 lbs.

W. McROBERTS, of St. Lawrence County, N. Y., writes :

This is to certify I got five pounds of Stanley potatoes from E. M. Bracy. I planted them and harvested them, and I had nearly three bushels. They are a fine eater and large yielder. I also recommend the Green Mountain as a fine eater and a good yielder. It seems as though every farmer should have one of Humphrey's Concave Potato Knives, as they are a great saving in cutting seed potatoes.

JAMES MCGLAUGHLIN, of St. Lawrence County, N. Y., writes :

MR. BRACY—The potatoes I got from you are good eating; no rot; good size. From 1½ bushel I had 8 bushels.

*Prices for Bracy's Vigilant, Northern Star, Columbus
and Oswegatchie.*

BORDEAUX MIXTURE.

For Black Rot, Downey Mildew and Anthracnose of Grapes, Potato Blight, Potato Rot, Leaf Blight of Cherry, Pear, Quince, and other Fungus diseases 20 lb. package (50 gals. wash), \$1.00.

HUMPHREY'S CONCAVE POTATO KNIFE.

The blade of this knife is very thin and just the right shape to divide the potato into one, two or three eye pieces very rapidly, without cracking the tuber or injuring the vitality of the germs as a punch cutter will do. With it seed potatoes can be cut better and from two to three dollars per acre saved in seed and time. Price, post paid, 35 cents each; 6 for \$1.50.

Reid's Electric Inhaler !

BURLINGTON, Vt., Dec. 3rd, 1890.
Gentlemen:—Please send by express, C. O. D., six dozen Reid's Electric Inhalers at once. They are the greatest and best article I ever sold. I want the general agency for Burlington. Please send necessary printed matter.

Yours truly,

A. G. BECKWITH.

This little instrument consists of a Perfect Battery so constructed as to generate an Electrified and Medicated Vapor, and can be used by any one with convenience.

By drawing in the breath while applying it to the nose, the **Vapor** penetrates to every part of the Nasal Cavities and at once destroys the disease germ, stimulates the nerve forces, regulates the circulation, soothes the inflamed surfaces, and brings about a healthy action that soon results in a perfect and permanent cure. Its beneficial influence is experienced instantly, and it may be used a hundred times a day, it desired, without harm or danger. The first effect is to clear out the head, giving immediate relief from the "stuffed-up," head-splitting sensations and exciting a free discharge from the nose and throat; after which the relieved membranes respond to its healing influence.

It relieves **Headache** attendant upon Catarrh almost instantly.

It cures a fresh **Cold in the Head** in a few hours. **Earache** is cured at once, by letting the Vapor penetrate into the ear, and **Deafness** is often cured by its use.

Hay Fever is immediately relieved and soon cured by its wonderful soothing and healing properties.

Asthma and Bronchitis are always benefited and cured by its use.

Those who have tried the ineffectual remedies for Catarrh, with which the country is flooded, will be astonished to see how quickly they will be benefited by our Inhaler. Put up in Patent Nickel Case and sent to any address on receipt of price, \$1, six for \$5.

AGENTS WANTED.

H. N. REID & CO., Ogdensburg, N. Y.

Gentlemen:—I have been troubled with catarrh for fifteen years, and have used creams, snuffs and lotions, and paid \$50 for special treatment, with the hope of curing my catarrh. Three months ago I purchased one of your Electric Inhalers and used it, and I must say it has done more good than all the other treatments put together.

Ogdensburg, N. Y., Sept. 15th, 1890.

WILLIAM OSIER.

THE COMBINATION WEEDER.

Combining as it does, both the rake and hoe, it is the most serviceable, durable and the most perfect weeder on the market. Price, by mail, 30c.

WILSON'S line of Dress Goods is superior to any shown in Ogdensburg. Silks, Laces and Ribbons, in unlimited variety, for trimmings.

THE MCGOWEN NOZZLES.

No. 7.

These nozzles are the result of several years' experimental work in the construction of a nozzle which would be free from the defects of those already on the market. In spraying an apple orchard it was soon found that one of the worst features of spraying nozzles is their liability to clog, unless the liquid thrown is more carefully strained than is practicable in field work. In addition to this, nozzles which throw a fine spray do not concentrate sufficiently upon a given point, but cover too much area, thus wasting much of the liquid. Nor is the spray thrown with sufficient force to reach all parts of trees of bearing size, or even smaller ones, unless the nozzle is fastened at the end of a pole, as is so commonly done. If, however, the nozzle should clog while in this position all work must necessarily be suspended until the pole is lowered, the nozzle taken apart and cleaned, and again raised into the desired position. Professor Bailey has already emphasized this point in Cornell Experiment Station Bulletin No. XVIII. A spray cannot be thrown far if it is very fine, for it is then carried off by the wind. As commonly thrown to the tops of trees the drops are too large, and much material is wasted. Again, nozzles which are fairly well adapted to long distance work are of little use for small plants, and the reverse is also true. These are some of the difficulties with which the spraying world is obliged to contend, and there is no exaggeration in saying that *the nozzles here described will save no end of time, patience and money to fruit growers who avail themselves of their advantages.* The Cornell Experiment Station has used these nozzles exclusively during the past two years, and it is largely due to the fact that the earlier forms were improved under the direction of the Station that the present perfection has been attained. These nozzles are the *most practicable, most efficient*, and the best constructed of any made. They are not cheap affairs made to sell, but are built for service and are of fine workmanship. Manufactured by John J. McGowen, Ithaca, New York, U. S. A.

Combination Nozzle, piston in two parts, \$2.00.

E. M. BRACY, Agent, Ogdensburg, N. Y.

HOOVER POTATO DIGGER

"The Best Digger on Earth, so far as I know."

T. B. TERRY, in "Rural New Yorker."

"With the New Elevator and the New Drive Chains on, I do not see how the Hoover Digger can be improved. Stones do not bother now.

EDWARD F. DIBBLE,
Dec. 1, 1893. Pres. N. Y. State Farmers' Alliance.

Steitz Potato Bug Sprinkler.

Patent Brush Sprinkler.

A Practical Machine that will rapidly and successfully perform a work that has heretofore been slowly and tediously done by hand.

How many hands and horses it takes, how much time and money it costs, how the sprinkling you begin on a fair day is stopped by stormy ones? You know all this better than we.

But maybe you do not know how easily, cheaply and quickly it is possible to sprinkle potatoes: that you can take a *Steitz Sprinkler* into the field and in a single day sprinkle from 10 to 15 acres.

This way you do not need any hands to help, and only one horse; the machine does the work. All you have to do is to fill the tank with water and Paris Green.

FACTS WORTH KNOWING

Only from 5 to 8 gallons of Water and from 5-8 to 3-4 pounds of Paris Green are required to the acre.

Machines are all made to straddle two rows 3 and 3 1-2 feet apart. Apply for circular to

J. R. STEITZ, Manufacturer, . .
