ACCOMAC NURSERIES.

PRICE-LIST OF

STRAWBERRIES.

Fruit, Shade and Ornamental
Trees, Shrubs, Small
Fruits, Etc.

LOCATION.

Our Nurseries are located about the center of the peninsula of the Eastern Shore of Virginia, on the line of the New York, Philadelphia and Norfolk Railroad—the great through route from North to South, connecting at Philadelphia and New York for all points North and West, and at Norfolk for points South. Our office is within a few yards of the railroad depot, Adams Express, Western Union Telegraph and Post-office, so that we have every facility for quick dispatch of business.

A. J. McMATH,

(Successor to McMATH BROS.)

ONLEY, - VIRGINIA.

To Our Friends and Patrons.

IN SENDING out this Price-list, we desire to thank you for the liberal patronage you have given us, and for the many encouraging letters that we have received testifying to the fine quality of our stock. We employ no agents, and customers get stock at first cost direct from us. We therefore ask you to help us by getting your friends to write direct to us for prices.

Terms and Advice.

Cash with Order, unless by special agreement. Nursery stock bought on time seldom does well ! Then, you should not expect us to know who are good and who are not. We cannot afford to take any risk at these low prices.

Money can be sent by registered letter, draft on Philadelphia or New York, or post-office money order.

Very Important. In every letter always write your name, post-office, county and state very plainly, and give explicit shipping directions, whether by freight or express.

Packing is done in best manner, free of charge, except in cases where large boxes are required ; then only a sufficient charge is made to cover cost of material.

Reference. Pocomoke City National Bank, Pocomoke City, Md.

Guarantee. We guarantee our stock true to name, and will replace the same free of charge if it should prove the contrary ; but it is mutually agreed between the purchaser and ourselves that we will not be held responsible for any amount greater than the original cost of stock.

When to Order. Early in all cases. Our customers are never more anxious to get their stock than we are to send it ; but remember that during the rush of the season we have a great many orders, which must be filled in turn as they come. If you do not hear from us in a reasonable time after sending your order, then drop us a card. It is surprising how many letters and orders we get with no name signed !

Strawberries.

The Strawberry is our specialty. In fact, we are the largest growers of plants in the state, and our stock has gone to every section of the Union and to foreign countries.

Our soil is especially adapted to the growth of strong, well-rooted plants, which are dug from new beds, cleaned of dead leaves and vines, roots straightened, tied in bundles of 50 each, and packed with moss in light boxes or baskets to carry safely by freight or express to any part of the country. We do a large mailing business, and small quantities can generally be sent cheaper and in better condition by mail than in any other way.

The blossoms of all varieties are bi-sexual or perfect, except those marked (P), which are destitute of stamens, and are termed pistillate, or imperfect, and need every fourth or fifth row to be planted with some perfect sort.

CULTURE. On arrival of plants, unpack at once and bed them in the ground, pressing the soil closely around the roots to prevent drying out, or dip in a "muddle" made of earth and water as thick as cream, and lay away in a cool, damp cellar, where they can neither dry nor freeze, until they can be planted in suitable weather. Strawberries delight in a rich, moist soil, but will grow almost anywhere if properly worked and well manured. Unleached wood-ashes, bone-meal or barnyard manure are the best fertilizers. Have your soil as fine as possible, and plant in fall or early spring, setting plants 18 inches each way for garden, or 4 x 2 feet for field culture, cultivating each way until runners start ; then cultivate only the 4-foot way, allowing rows to mat. Have a bucket of water at hand, into which dip the roots, being careful not to wet the tops, and expose to the wind and sun as little as possible. Large beds should be rolled as soon as set out. Cut off all blossoms on spring-set plants, and cultivate and hoe frequently.

NEWER VARIETIES OF STRAWBERRIES.

MEEK'S EARLY. Originated with Mr. James Meek, of A. A. Co., Md. Blossom perfect ; plants large and stocky, resembling Bubach in this respect. Time of ripening, with the very earliest, such as Hoffman, Michel's Early, etc., being larger and more productive than these, and firmer than any except Hoffman. It is probably the best extra early berry yet introduced, and in great demand in Norfolk Co., Va. Try it.

BIDWELL. This is an old variety, but is still one of the best early berries for heavy soils. Berry long, large size, deep crimson, and very productive.

HOFFMAN. To well-known in the South to need any praise, but unfortunately has become badly mixed. I have taken special pains to have my stock absolutely pure, and will only have about 200,000 of this variety to offer this year.

EDGAR QUEEN. (P.) One of the most beautiful berries ever grown, of Bubach type and claims to equal Crescent in productiveness. The originator selected berries over 2½ inches in diameter, 16 of which made a quart. Try them.

STRAWBERRIES, continued.

DAYTON. Very productive; about 6 days earlier than the Crescent; solid; a good shipper; of fine form and excellent flavor. It is an immense yielder of very large fruit, and holds out well in size to the end of the season. The points of excellence claimed for the Dayton are: (1) earliness, (2) hardiness, (3) large size, (4) productiveness, (5) superior flavor, (6) perfect bloom, (7) good shipping qualities, (8) desirable color, (9) vigorous growth, (10) its entire freedom from rust, always producing large, bright, clean and healthy foliage. — *Disseminator*.

LEADER. The originator says of it: "The Leader fills a long-felt want of a large early berry. It is of fine quality, oblong in shape, and very bright crimson in color; enormously productive, and continues in fruit for a long season, maturing the last berries nearly as large as the first. Blossoms are strong, staminate; plants very vigorous, making plenty of runners, and showing no trace of scald or rust."

VAN DEMAN. Thoroughly tested at the experimental stations for three years before it was offered for sale; reports from nearly all stations were very flattering. Promises to stand at the head of early varieties, both for home use and market. The berry is on the conical order medium to large, dark glossy crimson, with bright golden prominent seeds; when ripe looks as if it had been varnished. Flavor of the best as a shipper stands second to none. Its great vigor of plant growth enables it to withstand drouth and rain.

BEDER WOOD (Racster). This berry is spoken well of nearly everywhere, and promises to become an exceedingly valuable early sort. Matthew Crawford, of Ohio, perhaps the best authority upon the Strawberry in the world, says: "This is, in my opinion, the best early variety ever introduced, either for home use or market. The plant is faultless and enormously productive. No rust yet. Fruit large, of fine form and color, moderately firm, and of good quality. Fortunately it makes many runners, and they will all be wanted as soon as its value is known."

Purdue Experiment Station, LaFayette, Indiana, says: "Beder Wood originated in Illinois, and was fruited on our grounds last year for the first time. It is a strong grower, carries its fruit well up off the ground, ripens early, is very productive, of good size and color, and fair quality."

Hatch Experiment Station, Massachusetts, says: "Beder Wood promises to be one of the best early berries, ripening as it does with the earliest. The fruit is of good size and color, productive and showy. It has a perfect flower, fine, healthy foliage, and can be used to fertilize any early kind."

GILLESPIE. (Son of Haverland.) The Haverland has been a great favorite for years as a large, medium early berry, but it was a pistillate, and lacked firmness. Now if its son covers all these defective points, we certainly have a grand berry in the Gillespie. The plant is a tall, luxuriant grower, free from rust, and enduring extremes of heat and cold; blossom perfect; a most prolific bearer. Berries of the largest size, regularly oblong, rounded or blunt at the apex; color bright scarlet; flesh firm but melting, sweet and good; a decided improvement on Haverland, having perfect flowers, larger berries and of better quality, without stringy or hard center, and we believe it has fair carrying qualities. At the Strawberry show at Hamilton, Ohio (June, 1890), the Gillespie made a fine display, and the fruit committee reported: "The Gillespie is the largest berry on the tables to-day—long oblong in shape, bright scarlet-red color, fair to good in quality. The committee think it a first-class berry."

PRINCESS. (P.) The claims for this variety are large size, perfect form, ripening all over at once, and great productiveness, having yielded at the rate of 825 bushels per acre.

MARTHA. (P.) In both plant and fruit this strawberry resembles the Wilson, but the blossoms are pistillate.

WOOLVERTON. Wherever this has been tested it made a good record in both hills and matted rows. It has a perfect blossom, and the fruit is very large, resembling the Bubach in form.

GOV. HOARD. A seedling of the Sharpless, and it is considered better than its parent. It is a very fine table berry.

GILLESPIE.

STRAWBERRIES, continued.

ENHANCE. A vigorous and healthy grower, with dark green foliage; develops massive crowns; flower perfect; one of the most prolific in pollen; berries largest size, very firm, bright crimson color; very attractive and salable.

ECLIPSE. (P.) One of the finest kinds we have; luxuriant grower, with dark green, perfectly healthy foliage; strong roots, standing extreme drouth or wet; one of the most productive; berries very large, bright scarlet, uniform size, excellent quality, firm, carries to market well, and brings the highest market rates.

CRAWFORD. Large, firm, beautiful red color, of fine quality; ripens early; continues a long time in bearing; is very prolific. Plant a strong, vigorous grower. On rich soil one of the finest.

REGINA. From Alabama, and claimed to be the latest of all,

GANDY. Still holds its reputation as a late berry. It requires good cultivation and rich soil. The berries are of large, uniform size and shape, of bright crimson color, very handsome and showy, of good quality, and very firm.

PARKER EARLE. This is one of the few berries that seem to succeed in all localities. It is one of the most productive varieties, and stands drought remarkably well. It has been tried by experimenters in many different sections of the country, and has won praise from all who have fruited it. The fruit is of good size, long, conical, with a slight neck, very bright red, and of good quality. The plants are healthy and vigorous, making immense stools but very few runners. It is a good market variety, carrying well, and attracting general attention because of its fine appearance. Season late.

MICHEL'S EARLY. As early as the Hoffman, and matures its crop in a few days, while prices are high. Succeeds finely in the south when not allowed to mat. It is an excellent fertilizer.

The Strawberry is our specialty, and we are the largest growers of plants in the state.

GENERAL LIST OF STRAWBERRIES.

Those marked (P) have pistillate or imperfect blossoms, and must be planted near some variety with perfect flowers, to fruit them. If to go by mail, add 20 cts. per hundred to pay postage; at dozen rates mailed free.

ONLEY, - - VIRGINIA.

LOCATION.

Our nurseries are located about the centre of the peninsula of the Eastern Shore of Virginia on the line of the New York, Philadelphia and Norfolk Railroad—the great through route from North to South, connecting at Philadelphia and New York for all points North and West, and at Norfolk for all points South. Our office is within a few yards of the railroad depot, Adams Express, Western Union Telegraph and Post Office, so that we have every facility for quick despatch of business.

TERMS AND ADVICE.

Cash With Order, unless by special agreement. Nursery stock bought on time seldom does well! Then, you should not expect us to know who are good and who are not. We cannot afford to take any risk at these low prices.

Money can be sent by registered Letter, draft on New York or Philadelphia, or Postoffice Money Order.

Very Important. In every letter always write your name, postoffice, county and state very plainly, and give explicit shipping directions, whether by freight or express.

Packing is done in the best manner, free of charge, except in cases where large boxes are required, then only a sufficient charge is made to cover cost of material.

Reference. First National Bank of Onancock, Virginia.

Guarantee. We guarantee our stock true to name, and will replace the same free of charge if it should prove the contrary; but it is mutually agreed between the purchaser and ourselves that we will not be held responsible for any amount greater than the original cost of stock.

STRAWBERRIES.

The strawberry is our specialty. In fact we are the largest growers of plants in the state, and our stock has gone to every section of the Union, and to foreign countries.

Our soil is especially adapted to the growth of strong well rooted plants, which are dug from new beds, cleaned of dead leaves and vines, roots straightened, tied in bunches of 50 each, and packed in moss in light boxes or baskets, to carry safely by freight or express to any part of the country. We do a large mailing business and small quantities can generally be sent cheaper and in better condition by mail than in any other way.

The blossoms of all varieties are bi-sexual or perfect, except those marked **P**, which are destitute of stamens, and are termed pistillate, or imperfect, and need every fourth or fifth row to be planted with some perfect sort.

GENERAL LIST OF STRAWBERRIES.

Those marked **P** have pistillate or imperfect blossoms, and must be planted near some variety with perfect flowers, to fruit them. If to go by mail add 20 cents per 100 to pay postage: at dozen rates mailed free.
