SPRING

1894

PRICE LIST
OF THE
Peachland Nurseries
SEAFORD, - DELAWARE.
CHARLES WRIGHT, PROP.

These Prices are subject to fluctuations of the market and may be changed at any time without notice.

PEACHES—Leading Varieties.

(ONE YEAR FROM BUD.)

On Natural Seedlings Only.

Having enjoyed an extra good trade on peach trees the past season, I have but few to offer this spring. My stock of trees now consists of but a few thousand trees in 2 to 3 ft. grade, very few in 3 to 4 ft., and but a few hundred 4 to 5 ft. However, I expect to have next fall the largest stock of Peach trees, as well as Apple, Plum, Pear, Nut and other trees, and Strawberry plants, I have ever grown; Should you desire anything then, that I cannot supply you, now I will be glad to make most liberal quotations on your order. A new descriptive catalogue will be issued about September 1st. Send for it.

	<i>Each.</i>	<i>Doz.</i>	<i>Hun.</i>	<i>Thou.</i>
First Class, 4 to 5 feet.....	\$0 25	\$2 00	\$8 00	\$60 00

Special Prices on 10,000 Lots.

STRAWBERRIES.

Owing to the unprecedented drouth early in the season, I have not the large quantity of strawberry plants to offer I usually have, but can assure my customers the quality will be fully up to the standard. Like everything else, it

costs money, time and labor to handle them in the best manner, so I wish it understood, my plants and prices are not in competition with the cheap stuff sold by parties who have no reputation at stake, and who merely want to make sales. Plants are dug from young beds EXCLUSIVELY, which have never fruited, handled in the best manner, tied in bunches of 50, packed in moss to carry any distance, and as a rule, have always given entire satisfaction.

I have probably the largest stock of the new berry, Greenville, in the Eastern States. This probably will supercede Bubach when it is better known. In addition to the list below, I can supply plants of perhaps fifty other varieties that I do not think it worth while to describe at length. The varieties described comprise only such of recent introduction as have proved satisfactory on my grounds.

GREENVILLE.—An imperfect flowering variety that originated some years ago in Ohio; strong, vigorous grower, exceedingly prolific, only surpassed by one or two in this respect; berries large to very large, firm, good color, best quality; medium early,. Having fruited this in somewhat extensive way, I do not hesitate to pronounce it one of my best all-round varieties.

VAN DEMAN.—Extra early, has been tested and succeeds almost everywhere; good size, firm, very productive, plant a good grower.

MEEK'S EARLY or ADVANCER.—From Anne Arundel county Md. One of the best of the recent introductions; as early as Hoffman, exceedingly firm, good size, strong grower and prolific.

EDGAR QUEEN.—An imperfect flowering sort that is a rival of Bubach. Good every way.

ENHANCE.—Berry large, productive, firm; plant a strong grower, and superior to fertilize pistillate sorts with. Midseason to late.

LOVETT.—Will become one of the leading market varieties; very large, productive, firm, and one of the best fertilizers.

PHILLIPS' SEEDLING.—A companion for Bubach, as it has all its good qualities with addition of a perfect blossom.

AUBURN.—Very large, rather shy, good grower.

DAYTON.—Pronounced by all who have grown it, to be a very fine berry, with me a good grower and desirable; early.

GOV. HOARD.—Very large, and while not as productive as some, it seems to be one of the very best of the large varieties and worthy of planting.

BARTON'S ECLIPSE.—This has been fruited here a number of years and considered by many, as superior to Haverland, and has a perfect blossom; good grower.

IOWA BEAUTY.—Plant a strong grower, berry extra large and fine.

BEVERLY.—I know little of this; I have fruited it and find it a rather large, good sort, though further trial is necessary.

GILLESPIE.—Exceedingly fine but a poor plant maker.

PRINCESS.—Equal to Bubach in all respects with me. No plants for sale.

NOTE.—"Per." signifies perfect, "imp." imperfect. All imperfect varieties require at least one row in every three or four to fertilize their blossoms, to insure bearing.
