N. C. AGRICULTURAL EXTENSION SERVICE RECOMMENDATIONS FOR INCREASING CORN YIELDS

1. Have soil tested and apply lime as recommended.
2. Prepare a good seedbed and plant level with the ground except where drainage is poor.
3. Use 300 to 500 lbs. of 6-8-6 or 4-8-8 at planting. Use the higher rates following crops receiving low amount of fertilizer and the 4-8-8 on potash deficient soils or following legumes for hay.
4. Avoid late, deep cultivation but control weeds early. Use a weeder where available until Corn is six inches high. Cultivate shallow until the Corn is 2 1/2 feet high, and then stop cultivation. Do not use turning plow or bull tongue which injures Corn roots.
5. Place rows about 3 1/2 feet apart.
6. Space plants about 16 to 20 inches apart within the row, using wider spacing for less fertile soils.
7. Sidedress with adequate nitrogen (potash where needed) when Corn is 6 to 8 weeks old or about 2 1/2 feet high. Yield increases of 25 to 45 bushels per acre may be expected by use of 500 lbs. of Nitrate of Soda or 400 lbs. of Calnitro or ANL, or from 250 lbs. per acre of Ammonium Nitrate. One-fourth of this rate of application should give yield increases of 10 to 12 bushels per acre above similar Corn receiving no side dressing.

CHEMICAL WEED CONTROL

Planters of large Corn acreages should contact us for information on chemical weed control. No obligation. A large eastern grower wrote us May 26, 1949, "I treated around 80 acres of Corn with the best results. Hardly a weed left and did not hurt any Corn in any way."

Here are the 3 new hybrids, two white and one yellow, developed by the N. C. Experiment Station and certified by the N. C. Crop Improvement Association for Piedmont and Coastal Plain farms. Each has been carefully tested for the area in which it is recommended.

F5 N.C. 29

(White.) A pure white, 2-ear hybrid with a white cob. A high yielder, comparable to N. C. 27 (yellow) except under conditions of severe drought. Grain quality and weevil resistance are also about equal to N. C. 27. The 2 good ears per stalk are well protected by fairly tight shucks. N. C. 29 is slightly later than N. C. 27. Stalks are vigorous, stand well and moderately resistant to leaf spot and brawn spot. The good qualities of this hybrid coupled with its white cob make it an excellent milling variety for the Coastal Plain where it is recommended. See illustration on this page. Prices: 7 lbs. (1/2 pk.) \$2.15; 14 lbs. (pk.) \$3.65; 28 lbs. (1/2 bu.) \$6.60, postpaid. Not prepaid, 7 lbs., \$1.75; 14 lbs., \$3.00; 28 lbs., \$5.50; 56 lbs. (bu.) \$10.50.

F27 N.C. 27

(Yellow.) The most widely planted yellow Corn in North Carolina and widely adapted and popular in South Carolina, Georgia, Alabama and Tennessee. While it is not the highest yielding yellow Corn in every test, other qualities have won for it by far the greatest planter acceptance. Grain quality, shuck coverage, insect resistance and general good appearance and performance are some of these qualities. Root and stalk strength are good and the plants average 179 ears per 100 stalks. Medium maturity. N. C. 27 at its very best, treated, tested and graded is sealed in the Wyatt bags. Buy it with confidence at your regular seed supplier's store or order it direct from us. Prices: 7 lbs. (1/2 pk.) \$2.15; 14 lbs. (pk.) \$3.65; 28 lbs. (1/2 bu.) \$6.60, postpaid. Not prepaid, 7 lbs., \$1.75; 14 lbs., \$3.00; 28 lbs., \$5.50; 56 lbs. (bu.) \$10.50.

3 NEW CORN HYBRIDS

F14 N.C. 31

F5 N.C. 29

F21 DIXIE 18

(Yellow.) This hybrid is characterized by its fine quality grain, weevil resistance and strong roots and stalks. It is recommended for upper and lower Coastal Plain where its plant vigor, tight shuck and high yield make it a favorite. Prices: 7 lbs. (1/2 pk.) \$2.15; 14 lbs. (pk.) \$3.65; 28 lbs. (1/2 bu.) \$6.60, postpaid. Not prepaid, 7 lbs., \$1.75; 14 lbs., \$3.00; 28 lbs., \$5.50; 56 lbs. (bu.) \$10.50.

F26 DIXIE 17

(White.) A very high yielding, red cob, white Corn averaging over 200 ears for 100 stalks. Prices: 7 lbs. (1/2 pk.) \$2.15; 14 lbs. (pk.) \$3.65; 28 lbs. (1/2 bu.) \$6.60, postpaid. Not prepaid, 7 lbs., \$1.75; 14 lbs., \$3.00; 28 lbs., \$5.50; 56 lbs. (bu.) \$10.50.

F14 N.C. 31

(White.) Released by the N. C. Agricultural Experiment Station in 1951 for seed production and general distribution for the first time this year. Ears are larger tending toward a one-ear variety, producing a high yield of excellent milling Corn on white cobs. Grain quality equals and stalk strength is as good or better than N. C. 27. Slightly later maturing than N. C. 27. Recommended for the Northern Coastal Plain and Piedmont. See illustration on this page. Prices: 7 lbs. (1/2 pk.) \$2.15; 14 lbs. (pk.) \$3.65; 28 lbs. (1/2 bu.) \$6.60, postpaid. Not prepaid, 7 lbs., \$1.75; 14 lbs., \$3.00; 28 lbs., \$5.50; 56 lbs. (bu.) \$10.50.

F1 DIXIE 82

(Yellow.) In 14 experiment station tests during 1949-1951 this new 2-ear yellow hybrid produced an average yield of 78.2 bushels per acre. Repeated tests indicate Dixie 82 out-yields N. C. 27 except under severe drought conditions. Grain quality is good with some variation in the color; good root and stalk strength. It is more susceptible to weevil than N. C. 27, moderately susceptible to leaf spot but more resistant to brown spot than N. C. 27. Recommended for both lower and upper Coastal Plain. Prices: 7 lbs. (1/2 pk.) \$2.15; 14 lbs. (pk.) \$3.65; 28 lbs. (1/2 bu.) \$6.60, postpaid. Not prepaid, 7 lbs., \$1.75; 14 lbs., \$3.00; 28 lbs., \$5.50; 56 lbs. (bu.) \$10.50.

Outstanding New
SNAP BEAN

WADE

(U.S.D.A. B-1515-1-7-1-2)

20 Wade Offered this spring for the first time. While it is several days later than some of the earliest varieties, Wade has a high rating in almost every bean use. The plants, resistant to Common and Southern Bean Mosaic and Powdery Mildew, stand (20 to 24 inches) well above all other bush varieties in the trial plots and are deeper green. Pods are long (6 1/2 to 7 inches) straight (see illustration) round, quite smooth and very dark green. This fine appearance, coupled with the fact that the picked beans are classed as slow wilting, should make it an important shipping variety. It has been given an excellent rating for freezing. While not the highest yielding bean, Wade ranks in yield well above many important commercial varieties, an example being its 219.9 bu. per acre yield as compared with Tendergreens 197.8 bu. per acre in a N. C. Experiment Station test. We are glad to be one of the comparatively few seedsmen receiving our stock seeds directly from the U. S. Regional Vegetable Breeding Laboratory, Charleston, S. C. 64 days. Pkt. 15c; 1/2 lb. 45c; 1 lb. 75c; 2 lbs. \$1.25; 5 lbs. \$2.65; 10 lbs. \$4.60, postpaid.

NEW HAMPSHIRE MIDGET WATERMELON

449 Watermelon New Hampshire Midget

449 New Hampshire Midget Watermelon

Designed and developed to meet the demand for a short season watermelon for northern gardens. The variety is extra early, ripening in 65 to 75 days from seeds. Its breeders also had in mind a melon that could be kept in the average home refrigerator. Melons are quite thin rind, about 6 inches through and average about 6 pounds. Flesh is strawberry-red somewhat coarse but good flavored. Prices: Pkt. 25c; 1/2 oz. 50c; oz. 80c; 1/4 lb. \$1.80, postpaid.

VEGETABLE ROOTS

ASPARAGUS ROOTS

CULTURE: Dig or plow out a trench 18 to 24 inches deep, put in plenty of well-rotted manure, covering it with a few inches of soil, then set the roots 1 1/2 to 2 feet apart and cover with 4 inches of soil. In the fall, cut off and burn the top growth, plow or throw down the earth and give a good application of stable manure. Early in the spring fork this in and apply ground bone meal. If white asparagus is wanted draw earth around the stalks as they grow. Do not continue cutting too long, as this exhausts the plants. 100 roots plant about 15x50 feet; 5,000 to 7,000 will plant an acre.

Washington Rust-Resistant
12 roots 85c; 25 for \$1.50; 50 for \$2.50; 100 for \$4.00, postpaid. Not prepaid, 12 roots 65c; 100 to 999 @ .03 each; \$22.00 per 1,000.

JERUSALEM ARTICHOKE

For winter and early spring crops sow from July to October 1. For spring and summer crops sow successively as early as soil can be worked.

Cultivate the same as cabbage or cauliflower and $\frac{1}{2}$ lb. of seeds are required per acre. The Salad Broccoli is cultivated like turnips and 1 ounce of seed will drill 100 ft.; 2 lbs. of seeds per acre.

The plants are rapid growing and produce a large head at center of plant in about 90 days from the date of planting. The head is a compact cluster of tightly closed flower buds and resembles cauliflower only in shape. When the central head is cut, numerous sprouts develop from the leaf axis, each sprout terminating in small green separate heads. These are cut in lengths of 10 to 12 inches. Served in the same way as asparagus, they form a very tasty and nourishing dish. June seeded plants transplanted in July provide a welcome mid-winter crop in this latitude. 90 days. Prices: Pkt. 10c; oz. 45c; $\frac{1}{4}$ lb. \$1.00, postpaid.

143 Broccoli Salad

This variety has become very popular in the eastern part of North Carolina. It is planted in the fall, and in growth somewhat resembles the Seven Top Turnip. Prices: Pkt. 10c; oz. 25c; $\frac{1}{4}$ lb. 60c; lb. \$1.50, postpaid.

Kill Red Mite, Scale, Aphis, etc.

PROTECT your valuable trees, fruit, shrubs, and ornamentals with Scalecide, "The Complete Dormant Spray".

Scalecide controls scale, red mite, red spider, bud moth, aphid, case-bearer, pear psylla, also brown rot canker and peach leaf curl. 1 gallon makes 16 gallons of spray.

Now is the time to order your Scalecide—the *safest* and *most thorough* dormant spray.

SCALECIDE

Scalecide is a miscible oil, containing a combination of vegetable and mineral oils, that is known as the complete dormant spray because it controls more insects and diseases than any other spray or combination of sprays at that time. It is noted for its safety and effectiveness.

How It Is Used

Scalecide is used for the control of San Jose scale, oyster shell scale, terrapin scale, cottony maple scale, red unite, pear psylla, aphids and other overwintering insects that are controlled by a dormant spray.

For apples, pears, peaches, plums, cherries and other deciduous fruit trees, including grape vines and deciduous small fruits, use 1 gallon Scalecide to 15 gallons water (6 gals. to 100; 1 cupful to 1 gal.) Spray any time after the leaves fall, until they start out in the Spring, providing it is not colder than 40° F., and there is no danger of freezing before it dries on the trees.

For shade trees, shrubs, and other deciduous ornamentals use 1 gallon Scalecide to 25 gallons water (1½ cupfuls or 1 pint to 3 gallons of water). Spray in the Spring before the foliage starts, when the temperature is warmer than 40° F.

For conifers, spruces, pines and evergreens, including broad-leaved evergreens, use 1 gallon Scalecide to 50 gallons water (1 cupful to 3 gallons of water). Spray just before the new growth starts in the Spring with a fine, misty spray.

WYATT'S Western Grown Muskmelons

CULTURE: The Melon delights in warm rich soil with good drainage. Good Melons, however, can be grown on almost any land if the trouble is taken to dig holes 2 feet square, filling them with a rich compost of woodsmold and cow-pen manure. Plant three-fourths to one inch deep April or May in rows 6 feet apart, leaving not less than 4 feet between the hills, putting about 10 seeds to the hill. As insects are often very destructive, it is best not to thin at all until the plants are well started. When they are large enough to be safe, thin to two in a hill, and keep the ground mellow and free from weeds. Those who make a speciality of Muskmelons will find it advantageous to start the seed under protection of glass, so as to have the plants ready by the time seeds could be usually planted in the open ground.

402 Rockyford Earliest Larger than Hales Jumbo, good appearance, and the famous Rockyford quality all wrapped into a melon ripening a week ahead of the earliest Rockyford and the market-wise grower has a really profitable melon. The delicious spicy sweetness typical of the Rockyford strain recommends it for home gardens as well as for commercial production. 75 days. Prices: Pkt. 10c; oz. 35c; 1/4 lb. 80c, postpaid.

409 Imperial or Hales Best No. 45 (Mildew Resistant) This variety is sometimes called Hales Best No. 45, and is similar to Hales Best. Fruits are short oval with indistinct ribbing and well netted. Flesh thick, firm, sweet and of good quality, light orange in color. Imperial can be picked at much later stages than other melons for distant shipping and it holds firm and in good edible condition. Recommended for areas in which powdery mildew is prevalent. 80 days. Prices: Pkt. 10c; oz. 35c; 1/4 lb. 80c, postpaid.

410 Gold Lined Rockyford

A green fleshed fruit of spicy deliciousness peculiar to Rockyford melons. It has a gold lining next to the small seed cavity which makes it unusually attractive in appearance. The flesh is green, very thick, sweet, and the shape is nearly round with a complete covering of netting and no ribs. 80 days. Prices: Pkt. 10c; oz. 35c; 1/4 lb. 80c, postpaid.

424 Rockyford or Netted Gem

This delicious melon, continues in strong demand year after year because of its distinctly superior flavor. Repeated attempts by breeders to transfer this quality to melons of the shipping type have failed as have efforts to introduce into Rockyford those characteristics that would qualify it as a shipping melon. It therefore remains the peer of local market and home garden melons. Fruits are small with rather large seed cavity, nearly round, 2 1/2 lbs; with very faint ribs, and heavily covered with hard grey netting. Flesh thick, green and of excellent texture. 92 days. Prices: Pkt. 10c; oz. 35c; 1/4 lb. 80c, postpaid.

414 Cantaloupe, Hales Best No. 36

414 Hale's Best No. 36

An early prolific and profitable shipping melon which comes to us from the Imperial Valley in California. The melons are oval in shape, heavily netted, and the flesh is firm and thick. The color is deep salmon and they mature a week or ten days earlier than other types of Rockyford melons. This is the standard commercial melon of the Southeast. 80 days. Prices: Pkt. 10c; oz. 35c; 1/4 lb. 80c, postpaid.

413 Honey Dew The fruits are round or oval and the skin smooth. The flesh is tasty, fine grained, and of a very sweet, sugary flavor. They weigh 6 to 8 lbs. each and the flesh is light green in color. 100 days. Prices: Pkt. 10c; oz. 35c; 1/4 lb. 80c, postpaid.

415 Hearts of Gold Grown extensively by market gardeners and is a good shipping type. Fruits weigh 2 pounds, are nearly round, distinctly ribbed, deep green, covered with fine grey netting. Flesh very thick, deep salmon; tender, juicy, sweet and aromatic. Prices: Pkt. 10c; oz. 35c; 1/4 lb. 80c, postpaid.

418 Hales Jumbo One of the most important commercial melons similar to Hales Best but slightly larger (average 4 to 5 lbs.) later and slightly more ribbed. 88 days. Prices: Pkt. 10c; oz. 35c; 1/4 lb. 80c, postpaid.

TOMATOES

Plant Successively Grow a Surplus to Can

CULTURE: 1 ounce is sufficient for 100 feet of drill; 4 ounces will produce enough plants to set an acre. The tomato flourishes best in warm light soil moderately rich. For early use sow $\frac{1}{4}$ of an inch deep in January or February in a hot-bed, or box. In order to get the plants strong and stocky, they should be transplanted when 2 to 3 inches high. When all danger of frost has passed set out in the open ground in rows 3 feet apart, leaving the same distance between the plants, and if convenient, furnish a support for the vine. For late crops sow in the open ground.

745 Break O' Day The earliest, disease resistant, globe-shaped, scarlet-fruited, Tomato. Break O' Day is an early Tomato with the good qualities of the popular later sorts. Fruits are Marglobe type, deep globe-shaped, solid, meaty, with few seeds, and bright scarlet. Excellent for home gardens, truck farmers, or canners. 70 days. Prices: Pkt. 10c; $\frac{1}{4}$ oz. 35c; oz. \$1.00; $\frac{1}{4}$ lb. \$2.20, postpaid.

738 Certified Marglobe WILT RESISTANT. Main crop, scarlet-fruited variety, originated by the U. S. Department of Agriculture for wilt resistance. It is also resistant to "nail-head rust" which attacks Tomato fruits. Fruits are of medium size, smooth, solid and deep from stem to blossom ends. They are set in clusters of 5 to 7 on vines with medium to heavy growth. It is valuable for wilt resistance, the popular Globe shape, scarlet color, a good cropper, marketer and shipper. 75 days. Prices: Pkt. 10c; $\frac{1}{4}$ oz. 30c; oz. 80c; $\frac{1}{4}$ lb. \$1.80, postpaid.

739 Select Marglobe Pkt. 10c; $\frac{1}{2}$ oz. 40c; oz. 70c; $\frac{1}{4}$ lb. \$1.60, postpaid.

750 Southland A new main crop shipping and canning tomato, for home and market gardens. Nearly globe shaped, with thick, solid flesh walls like Marglobe and Rutgers, it is of splendid market, canning and shipping type, with good scarlet color. Practically immune to fusarium wilt and resistant to collar rot caused by Alternari, it is also resistant to some forms of late blight (Phytophthera). (75 days.) Prices: Pkt. 10c; $\frac{1}{4}$ oz. 50c; $\frac{1}{2}$ oz. 85c; oz. \$1.45; $\frac{1}{4}$ lb. \$3.20, postpaid.

733 STOKESCROSS* No. 5 A new F2 Tomato Hybrid

This second generation hybrid is distinguished by its vigor. Stokes-cross No. 5 has been tested competitively in all parts of the United States and has been very generally accepted as an introduction of importance. Stokes-cross No. 5 is one of the strongest cropping tomatoes ever introduced. It will mature within 75 days from transplanting—10 days earlier than Rutgers—developing a continuing harvest of highly colored, rich flavored, 6 oz. fruit, that is nearly crack-free. It is offered as an important addition to our list. Although bred essentially as a processing tomato, Stokes-cross No. 5 has been found equally profitable as a market tomato. We shall not be surprised to have you report that it will out-produce and out-sell any tomato you have ever grown. This seed is sold in the introducer's original package.

SHIPMENTS

777 Turnip, Pomeranian White Globe

We are equipped to make prompt shipment except when weather conditions or other reasons beyond our control prohibit, of large or small orders for plants listed on this page during their respective planting seasons as shown following each variety of plants. All plants are produced by skilled growers. Orders for plants received after Thursday will be held until the following week thus avoiding unnecessary delay in delivery over the week-end.

Vegetable Planting Calendar

Many otherwise successful gardeners lose months of valuable production because of a failure to realize the cold hardness of a number of the most popular and productive vegetables.

By successive plantings beet, broccoli, cabbage, carrot, chard, kale, mustard, onion, parsley, radish, spinach and turnip (salad or root) can be kept in production, out-of-doors and without protection winter or summer, every day in the year in this isothermal zone.

The planting information shown in the chart on this page is the result of careful preparation and years of actual gardening experience. Planting dates shown for tender varieties are

based on the average U. S. Weather Bureau records of the last killing frost in the spring and the first killing frost in the fall in this zone, for the past 50 years.

Throughout our catalog we have endeavored to give the approximate number of days to maturity for all varieties. This information should be helpful, especially in determining the latest safe date to plant tender varieties in the summer or fall, in order to make a crop before frost.

Soil conditions permitting, we recommend planting on or immediately after the average date of the last frost in the spring, otherwise spring rains may delay planting days or weeks.

"TESTED SEEDS"

The term "tested seeds" as used in this catalog, and in all of our advertising means that every bag or package of seeds purchased at Wyatt's is supplied from a lot that has been carefully tested by the North Carolina Seed Testing Laboratory and the seeds are known to grow. Every lot of seeds reaching our warehouse is sampled and tested before the seeds are moved into our store for packaging or for sale in bulk. This accounts for the fact that "Wyatt's Tested Seeds" are more and more in demand in North Carolina and in the South.

Plant Wyatt's Tested Seeds and be sure of success.

FERTILIZERS AND SOIL CONDITIONERS

New Life

FOR YOUR SOIL

To have a healthy garden you must first have **healthy soil**. Don't waste time, seed and fertilizer on poor soil. Premier Peat Moss, 97% organic, gives your soil loam-like texture, making it more productive. It absorbs 20 times its own weight in moisture . . . loosens and aerates heavy soil . . . adds body to light soil . . . prevents leaching. Water and fertilizer penetrate deeply, feeding the roots as needed.

Remember, your garden can be no better than your soil. Get Premier Peat Moss, with the certified seal.

For new lawns 1 bale should be thoroughly pulverized and mixed in each 100 to 200 sq. ft. of lawn area. Nothing is so beneficial to establish lawns as a bale of peat mixed with 100 pounds of Sheep Manure applied to each 2,000 sq. ft. 3 or 4 times each summer. Peat should also be used liberally in gardens, flower beds and borders, and as a mulch for shrubbery, because of its capacity to hold moisture. Prices: Large Bale 18" x 20" x 39" \$4.95; Handy Bale 18" x 14" x 30" \$3.50.

Ten Steps in Lawn Building

- 1—Break or plow deep, with subsoil or similar plow to prevent burying top soil—then level or grade as needed.
- 2—Apply the equivalent of 3 heavy, green cover crops or 3 inches weed free manure or both if available.
- 3—Apply lime as needed up to 50 lbs. per 1,000 sq. ft. and fertilizer 40 lbs. per 1,000 sq. ft.
- 4—Pulverize and smooth surface.
- 5—Seed 6 lbs. Carolina, Sunny South or Shady Nook, mixture per 1,000 sq. ft., between September 1 and March 1.
- 6—Soak thoroughly but slowly to avoid moving seeds. Keep moist until grass is up. Soak occasionally during dry periods.
- 7—Mow Bermuda and rye grasses close and often; Blue grasses and fescues no closer than 2 inches nor more often than necessary, particularly during hot, dry seasons.
- 8—Compost clippings with liberal amount of sand and return to lawn in light applications as mulching during summer.
- 9—Feed at 8 weeks intervals, year 'round, with 20 to 40 lbs. per 1,000 sq. ft., high grade fertilizer or 50 to 100 lbs. per 1,000 sq. ft. sheep manure, or both. Always sprinkle after feeding.
- 10—Apply additional seeds as needed with regular feedings.

Wyatt's All-American Winners and Special Novelties For the Modern Flower Garden

1807 Morning Glory, Darling

REGAL LARKSPUR

1730 REGAL LILAC. Pure clear lilac.

1731 REGAL ROSE. Rich rose.

1732 REGAL DARK BLUE. Very deep violet blue.

1733 REGAL WHITE. Pure white.

1734 REGAL PINK. Brilliant pink or salmon.

1735 REGAL Mixed.

Pkt. 15c; 2 pkts. 25c; 1/8 oz. 35c; 1/2 oz. \$1.00.

1807 Morning Glory, Darling This new morning glory is rich wine-red with a snowy-white throat that provides enough contrast to make the flowers "stand out" immediately. When in full bloom, Darling is a very showy sight. Pkt. 10c; 3 pkts. 25c; 1/4 oz. 50c.

1754 Marigold, Red Head

(All-American Selection in 1948.) The most interesting of all the recent introductions in dwarf single marigolds. Petal color is mahogany when flowers first open, changing to auburn and later to bronze. The crested center is composed of small upright petals, gold edged with maroon. Blooms begin early and continue throughout the summer. Plants are dwarf and compact. Pkt. 10c; 3 pkts. 25c.

1844 Nierembergia, Purple Robe

A new All-American Selection, deep violet-purple. Pkt. 25c; 2 pkts. 40c.

1908 Petunia, Fire Chief

A brilliant scarlet red, an entirely new color in this class. It is about a foot high with rich, medium green foliage, freely branched but strong and upright. They hold the bright color without perceptible fading. Growth also holds up without spreading or flopping over late in the season. Fire Chief is the First Gold medal winner in 11 years and the only A.A.S. flower winner for 1950. Awarded more points than any other A.A.S. winner in any year. Pkt. 25c; 3 pkts. 65c.

1869 Pansy, Super Giant

The Super Giant Pansies are borne in profusion on large vigorous plants supporting long strong stems. The rich coloring and great size of the flowers in addition to its prolonged blooming season will make this variety a garden favorite. Pkt. 50c.

1127 Aster, Princess

Finest Mixed. The flowers are borne on long stems, have crested centers that remain full when flower is completely open, surrounded by multiple rows of guard petals. Fine for home gardeners because of high wilt resistance. Plants 2 to 2 1/2 feet tall, branching habit, blooms in late August. Pkt. 25c; 1/8 oz. 50c; 1/4 oz. 90c.

1913 Petunia, Glamour

Honorable mention A.A.S. 1942. Truly one of the loveliest Petunias we have ever grown. The flowers range from 4 to 5 inches across; they are artistically waved and ruffled, and the color is a beautiful salmon rose with golden veining on the white throat. Brilliant in the garden and glorious under artificial light. It is continuously in bloom and is the object of much admiration wherever grown. Pkt. 25c; 3 pkts. 65c.

2144 Tithonia, Torch

A quick growing dwarf annual, only waist high, easy to grow as a zinnia. Brilliant orange-scarlet flowers resembling a single Dahlia. Fine for cutflower or garden. All-America selection top winner for 1951. Pkt. 25c; 2 pkts. 40c.

1524 Cynoglossum, Firmament

2199 Zinnia, Peppermint Stick Mixed

2199 Zinnia, Peppermint Stick Mixed

One look at the picture tells you this is really new; unlike any zinnia on the market today. Peppermint Stick has a much wider color range (red and white, red and yellow, pink and white, orange and yellow, purple and white) than its parents, Old Glory and The Clown. One of the best cut-and-come-again zinnias, it produces flowers until frost if kept picked. An early strain, Peppermint Stick produces approximately 70% striped flowers. Pkt. 25c; 2 pkts. 40c.

2201 Zinnias, David Burpee Mixed

Unusually large, with the petals so attractively curled and quilled that the flowers may be likened to large-flowered chrysanthemums. Pastel shades predominate, with tones of apricot, cream, buff, burnt orange, soft rose and peach. 3 ft. tall. Pkt. 10c; 1/4 oz. 50c.

2202 Zinnias, Super Giant Mixed

This mixture contains the loveliest colors and combinations of colors ever seen in zinnias. Unusual shades of apricot, cream, buff, salmon and orange with few yellows and whites. Giant flowers 5 to 6 inches across, and of a wide diversity of flower form. Plants 3 ft. tall. Pkt. 10c; 1/4 oz. 50c.

1765 Marigold, Glitters

A new fluffy 3 inch incurved canary yellow. It flowers early on bushy erect plants. Pkt. 25c.

1485 Cosmos, Radiance

MORNING GLORIES

IPOMEAS. In growing Ipomeas (Morning Glories and Moonflowers), never plant until the soil is thoroughly warm. To aid germination of particularly hard-seeded varieties, filing a small notch at the top of the seed will help considerably. Always select the driest, sandiest part of the garden and sow where the plants are to flower as the Ipomeas resent transplanting. Plants should be kept on the dry side in order to induce early and abundant flowering with a rather sparse growth of foliage.

CLOVER SEEDS

F97 Alfalfa

F87 White Blossom Sweet Clover

Adapted to a wide variety of soils; is used for pasture, for forage, for ensilage, for bees, for soil improvement. Especially good as a manure crop and to inoculate the soil in preparation for a crop of alfalfa. The roots break up, aerate and drain stiff subsoils and add humus. Spring sowings will yield a crop the following fall and two crops the following year. The first season it grows 1½ to 2½ feet high, but if cut when 6 inches high it stools out and makes a more tender growth for grazing. Sow 15 pounds per acre July to October or February, March. Prices: lb. 60c; 5 lbs. \$2.05; 10 lbs. \$3.40, postpaid. Not prepaid, 10 lbs. \$2.90; 25 lbs. \$6.50; 100 lbs. or more at 24c lb.

F80 White Dutch Clover

Because of its spreading habit and persistent year 'round growth White Dutch is invaluable for lawn and pasture use. It grows in all soils and will grow both in the shade and open areas responding to lime and fertilizers recommended for other clovers. Like other clovers White Dutch enriches the soil while furnishing nutritious grazing. Sow 6 to 8 pounds per acre alone or 2 to 3 pounds with other clovers or grasses. Prices: lb. \$1.25; 5 lbs. \$5.35; 10 lbs. \$10.00, postpaid. Not prepaid, 10 lbs. \$9.50; 25 lbs. \$23.00; 100 lbs. or more at 90c lb.

F89 Ladino Clover—More Popular Every Year

A perennial clover of exceptional merit for pastures, especially on moist, fertile land. Recovers rapidly from grazing or clipping and is leafy and succulent. A complete recovery after grazing often takes place in two weeks. Its growing season is as long as that of any other legume. Like all clovers, Ladino succeeds best on well limed land. Sow 5 to 6 pounds per acre alone or 1 to 3 pounds in mixtures. Prices: lb. \$2.05; 5 lbs. \$9.35; 10 lbs. \$18.00, postpaid. Not prepaid, 10 lbs. \$17.50; 25 lbs. \$42.50; 100 lbs. or more at \$1.65 lb.

F89 Ladino Clover and Orchard Grass

F97 Alfalfa (Oklahoma Approved) While Alfalfa is a relatively expensive crop, the first cutting usually returns about double the cost of seeds, lime, fertilizer and planting. A good method is to lime the land and plant an annual legume crop that can be thoroughly disked, not turned, in preparing the alfalfa seed bed. Use 20 to 35 pounds (not more) borax per acre and drill August 20 to October 1, or February 15 to March 25, 25 to 40 pounds of thoroughly inoculated seeds per acre. Roll or cultipack after seeding. At seeding time use 1,200 pounds 2-12-12 and 8-10 tons barnyard manure if available and not weed infested. Apply 400 pounds 0-12-12 annually thereafter. Cut before ¼ flowers open. Always leave the alfalfa stand 6 inches tall or more for winter since any closer cutting invariably results in severe damage. If your stand of alfalfa becomes thin or weak sow 3 to 5 lbs. Orchard grass per acre to help control weeds and increase production. We handle only premium quality seeds. Supplies of good seeds will be limited. Prices: lb. \$1.05; 5 lbs. \$4.35; 10 lbs. \$8.00, postpaid. Not prepaid, 10 lbs. \$7.50; 25 lbs. \$18.00; 100 lbs. or more at 70c lb.

F95 Atlantic Alfalfa Seed supplies of this improved strain of alfalfa for the Southeast will be available for limited distribution this year. N. C. Experiment Station reports a fourth to a fifth more production with Atlantic than with other adapted strains, following good practices. We offer premium quality seeds of the highest purity. Prices: lb. \$1.50; 5 lbs. \$6.60; 10 lbs. \$12.50, postpaid. Not prepaid, lb. \$1.30; 5 lbs. \$6.25; 10 lbs. \$12.00; 25 lbs. \$28.75; 60 lbs. \$66.00.

F82 Red Clover (N. C. Grown) One of the most productive of the clovers. Well adapted to our piedmont soils. Especially valuable in pasture mixtures. Sow early spring or fall 20 pounds per acre. Lime and fertilizer as for other clovers. Prices: lb. 95c; 5 lbs. \$3.85; 10 lbs. \$7.00, postpaid. Not prepaid, 10 lbs. \$6.50; 25 lbs. \$15.50; 100 lbs. or more at 60c lb.

F83 Crimson Clover Should be sown from August to October. When sown by itself, 25 to 30 pounds are required to the acre; sown with grain or vetches, 15 pounds would be sufficient. Prices: lb. 55c; 5 lbs. \$1.85; 10 lbs. \$3.20, postpaid. Not prepaid, 10 lbs. \$2.70; 25 lbs. \$6.00; 100 lbs. or more at 22c lb.

F95 Sericea Lespedeza Scarified and recleaned. This is the perennial lespedeza being grown so largely over the south. Its greatest asset is that it grows on the poorest soils without fertilizer or lime and while it steadily improves the land, it produces an abundance of nutritious hay if cut when tender. Prices: lb. 55c; 5 lbs. \$2.00; 10 lbs. \$3.60, postpaid. Not prepaid 10 lbs. \$3.00; 25 lbs. \$7.00; 100 lbs. or more at 26c lb.

F93 Kobe Lespedeza A variety particularly adapted to lowlands and lighter soils. The leaves and stems are slightly coarser making a heavier hay crop. This variety is recommended by the N. C. Experiment Stations for all but the mountainous regions of North Carolina, South Carolina and Virginia. Sow 30 to 40 lbs. per acre. Responds to liming and fertilizing. Prices: 10 lbs. \$3.10, postpaid. Not prepaid, 10 lbs. \$2.60; 25 lbs. \$5.75; 100 lbs. or more at 21c lb.

F92 Korean Lespedeza Korean Lespedeza will grow on any soil, wet or dry, rich or poor, sour or sweet. Unexcelled for hay crop since it will produce from 2 to 4 tons of good hay per acre on a good thick even stand. It is almost equal to alfalfa in feeding value, and compares favorable in fineness, palatability and protein content. A good stand will make one ton of hay per acre for each 4 to 5 inches above cutter bar. Korean Lespedeza is earlier than other lespedezas, this insures harvest before fall rains and early frost and gives time for seed bed preparation for small grain that fall. Sow 30 pounds of seed per acre February to April. Prices: 10 lbs. \$2.90, postpaid. Not prepaid, 10 lbs. \$2.30; 25 lbs. \$5.25; 100 lbs. or more at 19c lb.

3 NEW CORN HYBRIDS

Here are the 3 new hybrids, two white and one yellow, developed by the N. C. Experiment Station and Certified by the N. C. Crop Improvement Association for Piedmont and Coastal Plain farms. Each has been carefully tested for the area in which it is recommended.

F5 N. C. 29 (White) A pure white, 2-ear hybrid with a white cob. A high yielder, comparable to N. C. 27 (yellow) except under conditions of a severe drought. Grain quality and weevil resistance are also about equal to N. C. 27. The two good ears per stalk are well protected by fairly tight shucks. N. C. 29 is slightly later than N. C. 27. Stalks are vigorous, stand well and moderately resistant to leaf spot and brown spot. The good qualities of this hybrid coupled with its white cob make it an excellent milling variety for the Coastal Plain where it is recommended. Prices: 7 lbs. (½ pk.) \$2.15; 14 lbs. (pk.) \$3.65; 28 lbs. (½ bu.) \$6.60, postpaid. Not prepaid, 7 lbs. \$1.75; 14 lbs. \$3.00; 28 lbs. \$5.50; 56 lbs. (bu.) \$10.50.

F14 N. C. 31 (White) Released by the N. C. Agricultural Experiment Station in 1951 for seed production and general distribution for the first time this year. Ears are larger tending toward a one-ear variety, producing a high yield of excellent milling corn on white cobs. Grain quality equals and stalk strength is as good or better than N. C. 27. Slightly later maturing than N. C. 27. Recommended for the Northern Coastal Plain and Piedmont. Prices: 7 lbs. (½ pk.) \$2.15; 14 lbs. (pk.) \$3.65; 28 lbs. (½ bu.) \$6.60, postpaid. Not prepaid, 7 lbs. \$1.75; 14 lbs. \$3.00; 28 lbs. \$5.50; 56 lbs. (bu.) \$10.50.

F1 Dixie 82. In 14 experiment station tests during 1949-1951 this new 2-ear yellow hybrid produced an average yield of 78.2 bushels per acre. Repeated tests indicate Dixie 82 outyields N. C. 27 except under severe drought conditions. Grain quality is good with some variation in the color; good root and stalk strength. It is more susceptible to weevil than N. C. 27, moderately susceptible to leaf spot but more resistant to brown spot than N. C. 27. Recommended for both lower and upper Coastal Plain. Prices: 7 lbs. (½ pk.) \$2.15; 14 lbs. (pk.) \$3.65; 28 lbs. (½ bu.) \$6.60, postpaid. Not prepaid, 7 lbs. \$1.75; 14 lbs. \$3.00; 28 lbs. \$5.50; 56 lbs. (bu.) \$10.50.

F21 Dixie 18 (Yellow) This hybrid is characterized by its fine quality grain, weevil resistance and strong roots and stalks. It is recommended for upper and lower Coastal Plain where its plant vigor, tight shuck and high yield make it a favorite. Prices: 7 lbs. (½ pk.) \$2.15; 14 lbs. (pk.) \$3.65; 28 lbs. (½ bu.) \$6.60, postpaid. Not prepaid, 7 lbs. \$1.75; 14 lbs. \$3.00; 28 lbs. \$5.50; 56 lbs. (bu.) \$10.50.

F26 Dixie 17 (White) A very high yielding, red cob, white corn averaging over 200 ears per 100 stalks. Prices: 7 lbs. (½ pk.) \$2.15; 14 lbs. (pk.) \$3.65; 28 lbs. (½ bu.) \$6.60, postpaid. Not prepaid, 7 lbs. \$1.75; 14 lbs. \$3.00; 28 lbs. \$5.50; 56 lbs. (bu.) \$10.50.

F27 N. C. 27 (Yellow) The most widely planted yellow corn in North Carolina and widely adapted and popular in South Carolina, Georgia, Alabama and Tennessee. While it is not the highest yielding yellow corn in every test, other qualities have won for it by far the greatest planter acceptance. Grain quality, shuck coverage, insect resistance and general good appearance and performance are some of these qualities. Root and stalk strength are good and the plants average 179 ears per 100 stalks. Medium maturity. N. C. 27 at its very best, treated, tested and graded is sealed in the Wyatt bags. Buy it with confidence at your regular seed suppliers store or order it direct from us. Prices: 7 lbs. (½ pk.) \$2.15; 14 lbs. (pk.) \$3.65; 28 lbs. (½ bu.) \$6.60, postpaid. Not prepaid, 7 lbs. \$1.75; 14 lbs. \$3.00; 28 lbs. \$5.50; 56 lbs. (bu.) \$10.50.

GRASSES

for Pasture and Hay

F57 Alta and F53 Kentucky 31 Fescues. Soil Conservation Service Photo.

F57 Alta Fescue A tall or giant Fescue adapted to a wide variety of soils and uses. Like most long lived grasses, growth is slow after germination and should not be grazed until 6 inches high. Once established Alta Fescue promises to be the most versatile and valuable grass in a generation. It is the highest yielding grass in virtually every experiment station where it has been tried; is palatable and grows over a longer period each year than other grasses. Alta has a remarkable resistance to drought and its dense, deep roots make it ideal for erosion control, soil building, weed control, roadside planting, athletic fields, parks, airports, etc. In combination with suitable legumes it produces an excellent almost year 'round pasture. Because it has no underground root stocks it cannot become a pest and is readily killed by plowing. Continued high yields will require feeding, especially nitrogen which may be supplied partly by seeding with clover. Seed in a prepared, firm seed bed fall or early spring 20 to 25 lbs. per acre alone; 10 to 15 lbs. with 3 lbs. Ladino, White or Sub Clover, or 15 lbs. Lespedeza. Prices: lb. \$1.15; 5 lbs. \$4.85; 10 lbs. \$9.00, postpaid. Not prepaid, 10 lbs. \$8.50; 25 lbs. \$20.50; 100 lbs. or more at 80c lb.

F53 Kentucky 31 Fescue A tall Fescue very similar to Alta. This strain was developed in Kentucky from whence its fame as a pasture grass has spread over the South. Because of its close kinship to Alta we recommend the same practices listed above for Alta. Prices: lb. \$1.15; 5 lbs. \$4.85; 10 lbs. \$9.00, postpaid. Not prepaid, 10 lbs. \$8.50; 25 lbs. \$20.50; 100 lbs. or more at 80c lb.

F48 Bermuda Grass Makes a vigorous and persistent growth in every part of the South; lasts for years; stands heat without injury; grows well in any soil that is not too wet. Sow at the rate of 10 to 20 lbs. to the acre for pasture; 60 to 80 lbs. for lawns and golf courses. Plant from March until June. Seed will not germinate when ground is cold, and under favorable conditions, takes 30 to 40 days to germinate. Prices: lb. 80c; 5 lbs. \$3.10; 10 lbs. \$5.70, postpaid. Not prepaid, 10 lbs. \$5.20; 25 lbs. \$12.50; 100 lbs. or more at 47½c lb.

Better health, greater wealth and soil conservation with permanent pastures.

F57 Dallis Grass (Imported) In the cotton belt it furnishes two or more hay cuttings of fine quality. It stands light frosts and does well on most any soil with ample moisture. It stands close grazing remarkably well and grows from early spring until killing frost. Sow February to April. Plant 8 pounds per acre. Prices: lb. \$1.25; 5 lbs. \$5.35; 10 lbs. \$10.00, postpaid. Not prepaid, 10 lbs. \$9.50; 25 lbs. \$23.00; 100 lbs. or more at 90c lb.

F43 Italian Rye Grass American Grown—An annual grass with tall, broad flat leaves; very valuable for winter pasture or cover crop, either alone or in mixture. Sow 10 lbs. per 1,000 square feet for lawn; 30 to 50 lbs. per acre for pasture. Our seeds are thoroughly re-cleaned and are 99 per cent pure or better. Prices: lb. 50c; 5 lbs. \$1.60, 10 lbs. \$2.60, postpaid. Not prepaid, 10 lbs. \$2.10; 25 lbs. \$4.50; 100 lbs. or more at 16c lb.

F42 Perennial Rye Grass It produces an abundance of foliage that remains bright and green throughout the season, will bear frequent and close cropping, is relished by all kinds of stock, and is not easily injured by tramping. It prefers a stiff wet soil. Prices: lb. 60c; 5 lbs. \$2.05; 10 lbs. \$3.40, postpaid. Not prepaid, 10 lbs. \$2.90; 25 lbs. \$6.60; 100 lbs. or more at 24c lb.

F51 Carpet Grass Grows on poor sandy soils, if moisture conditions are favorable, even if the land is acid, and will furnish more grazing than Bermuda grass. Sow 10 lbs. per acre for pasture and 40 lbs. for lawns. Write for prices.

F55 Timothy Sow 15 lbs. per acre. Prices: lb. 55c; 5 lbs. \$1.85; 10 lbs. \$3.00, postpaid. Not prepaid, 10 lbs. \$2.50; 25 lbs. \$5.50; 100 lbs. or more at 20c lb.

F37 Bermuda (Hulled) This is the same Arizona grown Bermuda offered under F48 except that the tough hull has been removed and 1/3 less seeds are needed. Hulled Bermuda under favorable conditions during the late spring or summer will germinate in 8 to 10 days, and should be sown only during this period. Prices: lb. \$1.05; 5 lbs. \$4.35; 10 lbs. \$8.00, postpaid. Not prepaid, 10 lbs. \$7.50; 25 lbs. \$18.00; 100 lbs. or more at 70c lb.

F52 Red Top or Herd's Grass For hay, pasture and lawns. Best on heavy, moist lowlands. Sow 10 lbs. to the acre. Prices: lb. 85c; 5 lbs. \$3.35; 10 lbs. \$6.00, postpaid. Not prepaid, 10 lbs. \$5.50; 25 lbs. \$13.00; 100 lbs. or more at 50c lb.

F65 Permanent Upland Hay and Pasture Mixture A mixture of thoroughly cleaned grasses and clovers of adapted varieties carefully selected and mixed to produce an abundance of rich nutritive grazing or hay. It contains only the best quality Orchard, Alta Fescue, Dallis, Tall Oat and Perennial Rye grasses among others and Ladino, Dutch, Alsike, Medium Red and Lespedezas along with other clovers. Sow 40 lbs. per acre, spring or fall. Prices: lb. 80c; 5 lbs. \$3.15; 10 lbs. \$5.60, postpaid. Not prepaid 10 lbs. \$5.00; 25 lbs. \$11.75; 100 lbs. or more at 45c lb.

F47 Orchard Grass (Onion Free) One of our most productive grasses for the Middle South for hay and pasture. While succeeding well in almost all fertile soils it does best on loamy and moderately stiff uplands. Starts growth very early in the spring and continues well into the winter. It is a long-lived perennial grass, yet it is easily exterminated. Sow 20 to 25 lbs. per acre alone or 12 to 15 lbs. with other grasses and clovers. Prices: lb. 70c; 5 lbs. \$2.65; 10 lbs. \$4.60, postpaid. Not prepaid, 10 lbs. \$4.10; 25 lbs. \$9.50; 100 lbs. or more at 36c lb.

F197 Hegari

HEGARI

F197 Hegari Recognized as the most valuable and widely adapted member of the sorghum family, and well suited to conditions in the Southern states. Hegari has great forage value for two reasons. First because its high sugar content makes stalks and leaves highly palatable to livestock, and second, it yields heavily with its many broad leaves and substantial stalks. As an ensilage crop many acres are planted to Hegari every year in the South. As a pasture crop, in thickly seeded plantings it pastures well and also makes good hay. Its largest use is in bundle feeding and it can be left shocked in the field until fed, or as is coming into more general practice, it is ground head, stalks and leaves through a hammer mill. Hegari makes a good substitute crop for corn, which it out yields on light soils, and it can be planted much later. Prices: lb. 40c; 5 lbs. \$1.25; 10 lbs. \$2.00, postpaid. Not prepaid, 10 lbs. \$1.50; 25 lbs. \$3.00; 100 lbs. or more at 10c lb.

WYATT'S RECLEANED MILLETS

Seed thickly, not less than 50 lbs. to the acre, from the middle of April until the end of July. It's a quick crop, maturing in six to eight weeks. Cut while in bloom, before the seed hardens in the head. Prices: lb. 40c; 5 lbs. \$1.25; 10 lbs. \$2.00, postpaid. Not prepaid 10 lbs. \$1.40; 25 lbs. \$3.25; 100 lbs. or more at 12c lb.

F186 Pearl, or Cat-Tail Millet One of the best and most nutritious of the continuous cutting green forage plants. Grows 8 to 10 feet high, but cutting can commence when it has attained the height of 3 to 4 feet, when it will stool out enormously and make rapid growth; can be cut in this way three to four times during the season. It does well even on poor land, and surprisingly well in dry seasons. Plant April to August, 6 to 8 lbs. to the acre in rows 3 feet apart. Prices: lb. 45c; 5 lbs. \$1.40; 10 lbs. \$2.40, postpaid. Not prepaid 10 lbs. \$1.80; 25 lbs. \$4.25; 100 lbs. or more at 16c lb.

TEOSINTE

F289 Teosinte Cut when 4 or 5 feet high, it makes an excellent fodder, starts immediately into growth again, and will give several more cuttings. If sufficient quantity is planted a continuous supply of nutritious green feed can be had daily right up to frost. Plant in May or June in drills 3½ to 4 feet apart; 3 to 4 lbs. plants an acre. Prices: lb. \$1.50; 2 lbs. \$2.75, postpaid. Write for prices on larger lots.

F296 Combine Milo

F146 Soy Bean, Ogden

SOY BEANS

F146 Ogden Ogden is considerably earlier than most beans and is consequently better adapted to rotations with small grains. Seedings as late as June in the Wake County trials made a substantial production of hay. Average bean yield for 6 tests at scattered points in the state during 1943 was 27.8 bushels per acre. Plants are nicely branched and for that reason are more desirable for hay than the coarser growing types. Write for prices.

F150 Volstate A yellow seeded variety producing high yields of good oil beans. Plants are somewhat taller than Ogden and slightly less branched. For a hay crop or a crop that might be optional we would recommend Ogdens, but for a crop planted on light land and for combining we would recommend the Volstate owing to the height of the plant and the fact that the beans are somewhat bunched on the plant. Write for prices.

F143 Roanoke A new bean developed in the N. C. Experiment Station, U.S.D.A. Co-operating. Bean yield is higher than other popular varieties and the oil content of the bean is higher. Write for prices.

PEANUTS

CULTURE: Soils: Well drained sandy loam, properly limed, is best. Varieties: Virginia Bunch and Jumbo Runners in the old belt of North Carolina and Virginia. Spanish, North Carolina Runner or Virginia Bunch in the Southern Coastal plains and counties bordering the Piedmont using Spanish, Tennessee Red, or North Carolina Runner if in doubt as to the ability of the soil to make the larger varieties. In the Piedmont the Spanish variety is recommended. Smaller varieties produce more oil per ton of nuts, however, on adapted soils the larger nuts produce more oil per acre. Use 35 lbs. small varieties; 45 lbs. large varieties (shelled) per acre. Buy 1-3 more nuts by weight in the shell for the desired amount of shelled nuts. Field tests show 27 per cent increase in yield when seeds are treated with Arasan. Average of 22 tests conducted in North Carolina showed \$16.43 per acre increase return where peanuts were dusted 4 times with sulphur-copper dust, after deducting the cost of dusting.

GRANVILLE WILT and BLACK SHANK RESISTANT

F266 Dixie Bright 101, Certified

From information available, Dixie Bright 101 is the best in yield and value per acre of any variety having resistance to Black Shank or to Granville Wilt. This variety grows tall and normally produces broad and well proportioned leaves of medium length, the yield approaching that of 402. Since the crop grows with a yellow cast, it must appear well-ripened when primed; this is especially important so as to prevent the leaf from curing white. Dixie Bright 101 is not so severely affected by dry weather conditions, which causes the plant to button prematurely, as is the case of some other varieties. Spacing should be 18 inches to 20 inches in the row and plants topped high.

Dixie Bright 101 has moderate resistance to Black Shank and high resistance to Granville Wilt. Suitable throughout the state where growers are using a rotation to keep the degree of Black Shank infestation down to some extent, or where both Black Shank and Granville wilt are present, or where Granville wilt alone is present. Prices: oz. \$3.00; 3 ozs. \$8.25; lb. \$39.00, postpaid.

F261 Dixie Bright 102, Certified

Probably the highest quality variety available today, having high resistance to Black Shank and Granville wilt. A moderate yielder (about like Oxford 26 and Virginia Bright Leaf), usually produces cigarette tobacco nearly to the top of the plant, and can be cured to a rich lemon color. Dixie Bright 102 needs to be primed when mature and ripe and the temperature needs to be advanced early and rapidly as the leaf approaches the yellow stage. Otherwise, the leaf sponges easily. With proper ventilation, the leaf will dry at a fairly low temperature and dries quickly. The variety is suitable throughout the state where Black Shank and Granville Wilt are present. The variety did show considerable susceptibility to ringspot in some cases where ringspot is a problem. Fertilize liberally on lighter soils. Space plants 16 inches to 18 inches in the row and top high. Prices: oz. \$3.00; 3 ozs. \$8.25; lb. \$39.00, postpaid.

GRANVILLE WILT RESISTANT

F254 Oxford 26, Certified Highly resistant to Granville Wilt, also showing some resistance to Fusarium wilt. Recommended only for fields known to be contaminated with Granville Wilt. This strain is highly resistant, but for best results should be grown on soil rotated to other crops for 1 to 2 years. It can be planted closer together in the row for increased yield and the quality compares favorably with other varieties. Our seeds are chemically treated. Prices: oz. \$2.00; 3 ozs. \$5.25; lb. \$26.00, postpaid.

F269 Dixie Bright 27, Certified Has about the same degree of resistance to Granville wilt as Oxford 26. No Black Shank resistance. Yields 200 to 400 pounds more per acre than Oxford 26. The variety is a strong feeder and care should be taken to avoid over-fertilization with nitrogen. Allow to become well-ripened before harvest. Prices: oz. \$3.00; 3 ozs. \$8.25; lb. \$39.00, postpaid.

HOW TO USE DILUTION TABLE

This Dilution Table indicates the quantities of any given spray material to add to a given quantity of water to give the desired dosage (strength) of spray.

All liquid or semi-liquid materials are proportioned directly on a liquid basis, i. e., 1 to 100 dilution indicates that one gallon of spray material should be diluted with water to make 100 gallons of diluted spray (or three tablespoonfuls to make one gallon of diluted spray).

Dry materials such as Lead Arsenate or "BORDO" are proportioned by mixing a given number of pounds of spray material with water to make each 100 gallons of diluted spray. To aid in mixing, the table shows the smaller quantities of dry materials in convenient household measuring units.

NOTE: When two or more spray materials are combined in one spray mixture the same water is used to dilute all the materials.

The No. 220 will distribute fertilizer in the middles of three rows 12 to 14 inches apart; it will side-dress one side each of two rows up to 36 inches apart (one complete row; and corn in wider rows). You can use it in very narrow rows—as close as 9 inches. You can use it in 42 to 48-inch rows by closing off the flow in three spouts and distributing through the other three—either on the right or left hand side.

The No. 220 spreads fertilizer from 4 to 30 inches on the ground. The hopper capacity is one bushel and the weight of the load is placed over the wheel, making it easy to push. The No. 220 will distribute 100 to 2,000 pounds of commercial fertilizer to the acre. Quantity per acre is regulated by a notched index on the right hand handle. The shut-off rod is operated from the same point.

NO. 9—PLANET JR. HORSE HOE AND CULTIVATOR

Weight 70 lbs.
Price: \$26.95

These Planet Jr. Horse Hoes and Cultivators are stronger, better made and finished than any other one-horse cultivators, and enable you to increase your yield, because they do a greater variety of work in corn, potatoes, cotton, beans, tobacco and other crops requiring similar cultivation, and do it more thoroughly. Cultivate deep or shallow, in different width rows, and the extra long frames make them steady running. All Planet Jr. cultivator steels are made of beveled steel thickest down the center, making them self-sharpening, and the points retain their shape and strength. No. 9 has lever expander, allowing quick adjustment for different width rows. Used with or without a wheel.

NO. 9-D Without wheel. Price: \$24.75.

NO. 4-D—PLANET JR. PLAIN CULTIVATOR

PLANET JR. TRACTORS AND EQUIPMENT

Planet Jr.

The Planet Jr. trade mark has been known in the Implement field since 1871 and Planet Jr. machines and equipment have been sold by our company since 1881. More than three-quarters of a century of experience in design and manufacture is your recommendation to buy a Planet Jr. Garden Tractor.

Ranking above any tractors in their class are the efficient, sturdy and versatile 1½ h.p. and 2½ h.p. tractors shown at left of this page. These sizes are ideal for small farms, nurseries and home gardens. They have a variety of uses with attachments shown at right of page.

At the left below is shown the 3 h.p. and 5 h.p. tractors, which are designed for the farmer who has given up his horse and plans to use power equipment, or the commercial vegetable grower who wants ample power for plowing, harrowing, seeding, cultivating and mowing.

The illustration shows the many features of advantage to you—adjustable handles shaped for easy handling; sturdy construction, actually the frame is welded instead of bolted together; the motor is set well ahead of the wheels, balancing the weight, making it easier to turn at the ends of rows, and providing maximum traction and power beyond the rated horsepower of the motor.

The patented Planet Jr. Jiffy Hitch provides for quick-change of attachments without the use of tools.

Foliage plants grown for their brilliance of color. Very effective as pot plants or in semi-shade in the garden. Plant one inch in rich soil of a porous nature. Peat moss or leaf mold are good for this purpose. Little water is required until growth starts then increase as the plants become larger. The bulbs may be planted upside down for better plants but growth is slower in starting. Being of tropical nature, warm temperature is essential. Color is intensified by sunlight. Our mixture is made from named varieties. 35c each; Three 90c; Six \$1.65; Dozen \$2.75.

CANNAS

Foliage and flowering plants of tropical appearance producing great masses of foliage and flowers throughout summer and fall. Well adapted for use as foundation planting, screens and bedding. Plant after frost about two feet apart and cover shallow. A sunny location is best. Cannas are gross feeders and will readily respond to any additional attention.

KING HUMBERT—4 ft. This is the grandest canna ever offered. The large heart shaped leaves are purple-madder brown over bronze. Plant Wyatt's Gladiolus for the finest of Summer Cutflowers

GLADIOLUS are among the most popular of all summer flowering bulbs (Corms) especially well adapted for use as cut flowers. Color range is so extremely varied as to be almost unequaled. Culture is remarkably easy. Plant four inches deep and six or more inches apart in good garden soil after danger from frost and make successive plantings at two week intervals for continuous bloom until mid-July. Fertilizers are best applied as side dressing after growth starts, omitting same at planting time. Vigoro gives excellent results. Cultivate and water freely during the growing season.

After frost dig the corms, allow them to dry, cut off the tops remove the old shriveled corm and store in a cool dry frostproof location.

We offer, we believe, the finest, healthiest gladiolus obtainable. Corms offered are number one. Postage is prepaid at prices quoted.
