GUARANTEE OF GENUINENESS

Our trees are all budded or grafted as far as possible from bearing trees, and every care and precaution is exercised to have them true to name; still with all our caution mistakes are liable to be made, but we hold ourselves in readiness, on proper proof, to replace all trees and other stock that may prove untrue to label, free of charge, or to refund the amount paid. It is mutually understood and agreed to between purchaser and ourselves, however, that our guarantee of genuineness shall, in no case, make us liable for any greater sum than that originally paid us for said trees, etc., that prove untrue.

Address all letters to

GEO. C. ROEDING, President and Manager,
Fancher Creek Nurseries (Inc.)

Fresno, Cal.

REMARKS

In presenting to our patrons our price list for the season 1906-1907, we wish to thank them for past favors, and solicit a continuance of same. We shall endeavor to maintain our reputation for fair dealing, and to give our very best attention to all orders entrusted to us, so that the stock we send out shall reach our patrons in good condition and be satisfactory. Our facilities for shipping are as perfect as possible, and with our improved methods we are enabled to pack and forward orders at short notice.

At our local sales yard, 1225 J street, we will carry a fine line of ornamental plants to meet the demands of our customers who have found it inconvenient to visit our packing grounds.

The limited amount of space in our J street lots will not permit us to display our immense stock to advantage, and our patrons who are desirous of purchasing fruit as well as ornamental trees are strongly advised to visit our extensive grounds on the Southern Pacific Company's railroad reservation on H street, between Amador and Sacramento streets. In order to keep a full line of palms and decorative plants, we have erected a fine green-house 20 by 50 feet, and a large lath house, which will be under the charge of a thoroughly competent man. The packing grounds can be easily reached by taking the Fortcamp avenue car. Get off at Sacramento street and go two blocks west.

Our main office will be located at 1225 J street, in very commodious quarters and immediately adjoining our former office building. From here we are in telephonic communication with all of our nurseries and departments. We invite correspondence. Our services are always at the disposal of our patrons should they desire any advice on anything pertaining to our line of work.

Our stock of trees for this season is exceptionally fine, both in fruit and ornamental departments; and we are confident that we can please all those who place their orders with us. It is a rule of this establishment to send out no tree or plant which we would hesitate to plant ourselves.

NOTICE TO CORRESPONDENTS

1. All orders should be legibly written on a separate sheet of paper, and not mixed up with the body of the letter.

2. It is always advisable to send orders in for nursery stock as early as possible, as those who come first are served first, and we make it a rule to fill all orders in rotation as received.

3. In ordering please state whether substitution will be permitted, as we feel at liberty when no instructions accompany the order to replace with other sorts as nearly similar as possible. Those not acquainted with the different varieties will do well to leave the selection to us, as we will send them only such varieties as we know are adapted to their locality.

4. Our packing and labeling is as perfect as possible, and we charge for the same only to cover the cost of material. All goods are delivered at the railway or express office free of charge.

5. State distinctly how you wish us to ship—by freight or express; also designate the route; otherwise we will use our discretion in forwarding.

6. After delivery to the carriers we can not hold ourselves responsible for any loss or injury to trees or plants after they have been carefully packed and shipped; but we will do everything in our power, if any loss should occur, for the protection and recovery of our customers' property.

7. Orders to be sent by express, C. O. D., will be filled, provided one-half of the amount is sent with the order.

8. If any mistakes are made in filling orders, we will cheerfully rectify the same, but must respectfully request our customers to notify us at once, or, at the most, within ten days after the receipt of the goods.

9. Orders from unknown correspondents must be accompanied with a remittance or satisfactory references.

10. We uniformly tie our trees in bunches of 10, and grapevines in bundles of 50; and we suggest to our patrons to make their orders for assortments as far as possible in multiples of these numbers.

11. Articles mentioned in the following list will be furnished at prices named as follows: 5 at the 10 rate; 50 at the 100 rate; 500 or more at the 1000 rate. Less than 5 of a variety at the single rate. This does not mean as an illustration that 10 pears, 10 apples, 10 peaches, 10 plums, 10 nectarines would be charged at the 100 rate. To secure this rate it would be necessary to order 50 trees of one sort.

ARTICLES BY MAIL

For the convenience of those who can not be reached by railroad or express, packages of small articles not exceeding four pounds in weight can be forwarded by mail, such articles to be charged at single rates, postage additional.

THE CALIMYRNA FIG

So many questions are being constantly asked by new-comers interested in the culture of Smyrna Figs that we have concluded to devote a few pages of our price list to the subject, for the purpose of clearing up some of the points which to the uninformed appear to be complicated.

As the Smyrna or edible figs are dependent on the caprifig for their development, we will refer to this variety first. To begin with, the caprifig is a distinct tree from the edible type of figs, and its only value lies in the fact that it serves as a home for the little wasp *Blastophaga grossorum*, which carries pollen from the male or staminate blossoms of the caprifig to the Smyrna fig. The Smyrna figs set fruit as early even as the first year, and these figs would mature providing there were insects present to convey the pollen to the figs. The caprifig, however, does not produce a succession of crops from which there are from three to four in the year, depending on the locality and season, until the fourth year. While the trees are young, they will produce the first crop known as the Profichi, which is the only one having a supply of the male blossoms, but as there are no succeeding crops, the insect has no place to deposit its eggs, and as a result is lost. When the trees reach their fourth year they (particularly Roeding's Capri No. 1) produce all three crops of caprifigs, the Profichi already referred to, appear in March and reach maturity in June; the second crop called Mammoni, pushes out in the latter part of that month and matures in September, when the third crop, Mamme, then makes its appearance. The insect enters this crop, lays its eggs, which develop as far as the larvae form, when the growing season stops, and at the same time the evolution of the insect ceases.

These figs remain on the trees all winter and are as firm and hard apparently as bullets. In the spring, when the new growth starts on the trees, the caprifigs commence to grow, and at the same time the wasp passes through its various stages until it reaches maturity. The female insect which is winged, passes out of this crop and enters the Profichi crop, the gall flowers of which are then in the receptive stage to receive the eggs. Now as to the wasp, the male is wingless, while the female is winged. The male always emerges from the gall first, crawls around in the caprifig, pierces the gall containing the female with its powerful mandibles and impregnates her. She then enlarges the opening made by the male, and in passing out of the fig comes in contact with the male flowers surrounding the orifice, which are then mature, and gets her body and wings dusted with pollen. At this stage, which is readily determined by breaking open a fig, for the insects, both male and female, will be found crawling around inside, the figs are picked off and hung up in the Smyrna fig trees. A single caprifig contains from two hundred to fifteen hundred wasps.

Within a very short time the workman knows by the outward appearance of the fig if it has reached the proper stage of ripeness. All the succeeding crops of caprifigs have no male flowers, and this being the

case, even if a wasp should find figs to enter they would never mature, for their flowers could not be fertilized.

The male and female wasps are readily distinguished, the former being of a reddish cast, while the latter is black and winged. The complication which many people imagine in connection with the distribution of the caprifigs seems ridiculous when it is borne in mind that the ignorant peasants do this work in Smyrna without having the slightest conception of the matter, not knowing the male from the female insects.

All they do know is, if they do not have this bug their crop is a failure. With all their ignorance, they harvest from twenty to thirty thousand tons of figs annually, and the failure of a crop is almost unknown there. Climatic conditions are not as favorable there as here, for it is often very much colder in winter. If the winds do not happen to come from the north in the summer, it remains cool, and early rains cause the crop in some seasons to be seriously damaged.

The distribution of the Profichi figs extends over a period of two weeks. In an old orchard the figs are picked three to four times with an interval of two or three days between each picking. In our orchard from thirty to forty figs are hung in each tree, and the entire expense for doing this work does not exceed one dollar per acre. In an orchard of five years 35 cents to 50 cents per acre would more than cover every item of expense.

Rumors are being constantly circulated, evidently by persons entirely unfamiliar with the subject, that Smyrna figs do not bear like the White Adriatic, all of which is a mistake. The fact of the matter is they bear fully as much and simply because they are apparently not so many figs on the trees does not indicate that the weight is not there when the fruit is dried. Fully 25 per cent of the White Adriatic are too small to be packed, while of the Smyrna figs the average is from 3 to 5 per cent. A sweat box of Smyrna figs will weigh from 20 to 30 pounds more than a box of the same size containing White Adriatic.

Can any intelligent fruit grower afford to raise a fruit which, no matter how processed, can never be regarded as a first-class article? It is no uncommon thing for 50 to 75 per cent of the Adriatic figs to sour on the trees before the drying season is half over, while with the Smyrna type such figs are only found after a heavy rain fall or after the harvesting season is practically closed, when rather unusual cold weather will cause the figs to sour.

Today the Adriatic figs are packed and sold not because they appeal to the trade, for they do not. They have absolutely nothing to recommend them to the consuming public except that they are cheap, and because many people do not know what a good fig is. When the Smyrna figs are produced on a more extensive scale, the White Adriatic will be relegated to the place they belong—hog feed. It is to be regretted that these figs were ever placed on the market, for their sale has done so much injury to the business, it is difficult to convince the trade today that California can really produce a good fig.

Thus far our experience has been that there is only one variety of the Smyrna fig which makes a high grade dried fruit, and this sort we have designated as the CALIMYRNA, which is identical with the one so largely exported from Smyrna. The name Lop Injir given to this variety, means nothing more or less than sweet fig, Lop being the Turkish word for sweet, and Injir, meaning fig.

In conclusion allow us to say, this firm has never offered anything in the tree line to planters unless we were convinced that it had merit. We have had enough confidence in the future of the industry to increase our own acreage from 60 to 220 acres.

For more detailed information, we beg to refer those interested to the monograph "The Smyrna Fig at Home and Abroad," by our Mr. George C. Roeding. Price 50 cents.

CITRUS TREES—All of our stock is grown in Exeter, along the foot-hills, the great thermal belt of Tulare county by the Roeding and Wood Nursery Company. The trees are planted in a heavy, black loam permitting the taking up of balled stock in first class shape. No fertil-

izer is used and in consequence of this, our trees when the planting season arrives, are sturdy, well matured—are in fact, perfect specimens. The iron in the soil gives the foliage a deep, lustrous green, healthy color, and this in itself makes the stock attractive to dealer and planter alike. Quotations named are for trees taken up with ball of earth. Trees dug with naked roots, in lots of fifty or over, 5c per tree less. Diameter measurements are taken one inch above the bud. Trees are branched at two feet from the ground and have fine, compact heads.

ORANGE—On Sweet Orange Root.

GRAPES—It is only natural, that Fresno, the greatest grape growing section in California, should have a nur-

Each Per 10 Per 100 Per 1000

sery correspondingly large devoted to grape culture. Cuttings of all the standard varieties of wine, raisin and table grapes are readily obtained. We are prepared to furnish cuttings in large quantities, providing parties place their orders with us prior to December 15th. A large area of our nurseries is devoted to grape culture in order to meet the requirements of our customers from all parts of the Pacific Coast, and even far down into Mexico. Our trade in recent years has extended to some of the Eastern States, where the winters are not too severe. Our stock of vines on their own roots, Phylloxera Resistant roots and grafted on Phylloxera Resistant roots is very complete. Our vines are grown in the Kings River bottom, on new land in loose alluvial soil, causing them to have a fine vigorous root system.

The vines will be supplied as follows: 500 at the thousand rate, where this rate is quoted, in not less than 50 of any one variety; 50 at the 100 rate, in not less than 10 of a variety. In small lots of one or two of a kind, the ten rate will apply except in quantities of less than five vines, when the single rate will be charged.

TAXODIUM— <i>Distichum</i> (Bald Cypress).....				
.....	6 to 8 ft	.80	7.00	
TEXAS UMBRELLA—(<i>Melia</i>). This beautiful tree is so well adapted to the great valleys of California and the demand for it has been so heavy, we have finally grown a stock of these trees large enough, we hope, to be in the position to meet all demands. Our enormous stock places us in a position to offer our trees at exceptionally low prices, and we trust the inducements we are making will encourage the extensive planting of this remarkably rapid growing and attractive tree.				
Well branched fine strong heads.....	10 to 12 ft	1.00	7.50	60.00
Branched.....	8 to 10 ft	.75	6.00	40.00

PALMS, AGAVES, DRACAENAS, YUCCAS

Of all the plants, grown in California and in other states and countries, with climates similar to ours, none are more decorative or do more to give a tropical effect to our gardens and rural homes than the palms. For the home the smaller and more tender varieties do much to set off the interior decorations. There is such an endless variety of these striking plants, that sorts for the smallest garden which do not grow higher than four feet, to those which attain a height of 100 feet, may be selected.

As will be noticed from the following list, we carry a large stock of palms in boxes and tubs. These have been taken out of the open ground and are well established in their containers. They can be used either for porch decoration or planted out in the open ground. Such plants give an immediate effect and never go back when transplanted. Hardy sorts are marked with an asterisk (*)

ROSES

Our roses are budded plants and field grown, in rich loose alluvial soil, which is conducive in giving them a fine vigorous root system and heavy tops. Roses are tied in bundles of ten, and we will appreciate it if orders are made up as far as possible in multiples of this number. Plants will be supplied as follows: 50 at the hundred rate, in not less than 5 of a variety. In small lots of one and two of a sort the ten rate will apply, except in quantities of less than 5 plants when the single rate will be charged. The roses are arranged in alphabetical order, the abbreviations opposite each variety indicates the class to which it belongs. All varieties marked with an asterisk (*) can be supplied in standards or tree form, which are budded at from 3½ to 4 ft. from the ground and have strong heads.

ABBREVIATIONS

Ban.—Banksia.

Requisites for Orchardists and Nurserymen

PRICES NET

GRAFTING WAX, $\frac{1}{2}$ lb., 15c; 1 lb., 25c.

RAFFIA: Used for tying bench grafted vines. The most desirable and cheapest material known for tying plants. Very largely used by florists and nurserymen. Much cheaper than string, and more durable. Per pound, 20c; 10-pound lots, 15c per pound.

TREE AND POT LABELS

	Per 1000
3½ inch Tree Labels, iron wire.....	\$1.00
3½ inch Tree Labels, copper wire.....	1.25
4 inch Pot Labels.....	.75
5 inch Pot Labels.....	1.00
6 inch Pot Labels.....	1.25

TREE PROTECTORS

Our extreme long, hot and dry summers make it imperative for all fruit growers to shade the bodies of young trees the first season. A piece of burlap or common newspaper wrapped around the tree will answer the purpose, but the most efficient and valuable of all protectors is made from the Yucca Palm. It is easily put on, will outlast any other protector, and allows the air to circulate around the stem of the tree. We have used these protectors for years, and can recommend them very highly. Soak the bundles in water shortly before using.

	Weight Per 100
30 inches long, 7 inches wide, \$17.50 per 1000.....	20 lbs
24 inches long, 7 inches wide, \$15.00 per 1000.....	18 lbs
18 inches long, 7 inches wide, \$12.50 per 1000.....	13 lbs
16 inches long, 7 inches wide, \$12.00 per 1000.....	12 lbs
14 inches long, 7 inches wide, \$10.00 per 1000.....	10 lbs
12 inches long, 7 inches wide, \$9.00 per 1000.....	9 lbs
10 inches long, 7 inches wide, \$8.00 per 1000.....	8 lbs

RIESER PRUNING SHEAR

This standard shear from which all hand shears are patterned is made in Switzerland. It is hand made, and the material is the very best. It will outlast any other shear made two to one, in the hands of a careful workman, even where subjected to the heaviest work. We have used it in our nurseries for years for stubbing nursery stock, and have found it to be the only shear which would stand up to the work.

Price, per pair, 8½ or 9 inch, with extra blade, postpaid.....\$ 4.00

Price, per dozen pairs, with extra blade, by freight or express.....\$41.00

Actual weight per pair, 1¼ pounds.

FRESNO PRUNING SHEAR

This shear has come into universal use in Fresno and in many of the larger vineyard and orchard districts. For vine and tree pruning there is no more serviceable tool made. It has given such general satisfaction, we do not hesitate to recommend it.

For light pruning or making cuttings, the small hand shear is to be preferred. The total length of the shear including handles, is 26 inches. The shear is made of the finest tempered steel, the jaws have a spread of $3\frac{1}{2}$ inches, permitting the cutting of branches which would ordinarily have to be cut with a saw. The handles are made of ash, and the sockets are strengthened with a steel band. Shears can be supplied with shorter handles if desired.

Price, per pair, express paid.....\$ 3.25

Price, per dozen pairs, by freight or express.....\$30.00

Actual weight per pair, $2\frac{3}{4}$ pounds.

PERFECT SHEAR

For making hard wood cuttings, such as grape, fig, etc., this shear in the hands of the average workman has given us the very best of satisfaction. It is strong and durable enough for ordinary work. It is patterned very much after the Rieser, having the double brass springs, which rarely break. It makes a clean cut and does not bruise the wood.

Price, per pair, $8\frac{1}{2}$ or 9 inch, postpaid.....\$ 2.00

Price, per dozen pairs, by express or freight.....\$20.00

Actual weight per pair, 1 pound.

ROSE SHEAR

This shear is only adapted for light pruning and for cutting flowers. It is just the thing for a ladies' use. It has a spiral spring and is nickle plated.

Price, per pair, postpaid, 6 inches long.....\$ 1.00

Price, per dozen pairs, by express..... \$10.00

Actual weight, per pair, $\frac{1}{4}$ pound.
