ROEDING'S TRUE TREES

FOR SEASON 1915-1916

Are described, illustrated and quoted in this new Catalog. We list only such varieties as have been tested and found worthy of planting.

To those who have never dealt with us, we will be glad to demonstrate the high quality of our stock. The yearly growth of our business has required scientific method of growing and the prompt handling of our large output of trees and plants.

We have every convenience for this purpose. Our main offices are located on the third floor New Holland Building, 2137 Fresno Street. The lath and greenhouses connected with our fully equipped packing house are situated at our Nurseries on the Roeding Park and Cemetery Car Line two and one-half miles northwest of Fresno. Our Local Sales Yard, L and Fresno Streets, carry a complete line of trees and plants to meet the demand of our customers who find it inconvenient to visit our packing yards.

We invite your correspondence on any subject pertaining to our business, especially for information concerning the best varieties of trees and plants for your locality. In addition to this, we have a "Landscape Service" Department at your disposal. We want to assist you in planning the planting of your grounds, orchards or vineyards, and further to supply you with "ROEDING'S TRUE TREES," which are not excelled by any other nursery concern on the Coast.

GUARANTEE OF GENUINENESS

In growing and furnishing all nursery stock, every care and precaution is exercised to have it true to name; still with all our care, mistakes are liable to be made, but we hold ourselves in readiness, on proper proof, to replace all stock that may be untrue to name, free of charge, or to refund the amount paid. This statement is due notice to purchasers of nursery stock of the extent of our liability after the same has been accepted by the buyer.

ADVICE TO CORRESPONDENTS

ORDERS

All orders should be legibly written on the enclosed order blank or a separate sheet of paper, and not mixed up with the body of the letter.

Write your name, postoffice, county and State; also give your nearest express office and railway station, or stage route, giving us the name of the transportation company. Orders for export to Old Mexico, the Hawaiian Islands, Cuba and South American points should give, in addition to the above, the steamship routes by which their orders are to be shipped.

Please state whether substitution will be permitted, as we feel at liberty when no instructions accompany the order to use other varieties as nearly similar as possible.

It very often happens on orders of small assorted varieties, for a home orchard, that it is necessary to make substitutions. On orders for commercial planting, substitutions are never made without first corresponding with the customer and making our recommendations before any alterations are made in the order.

Orders from unknown correspondents must be accompanied by a remittance or satisfactory reference.

Orders to be sent by express, C. O. D., will be filled, provided one-half of the amount is sent with the order.

All remittances should be by postoffice money order, registered letter, express order, bank draft, or check. All orders from foreign countries to be accompanied by draft or international money order.

PACKING

Our packing is as perfect as possible, and we charge for the same only to cover the cost of material. Cartage to the railway or express office free of charge.

We tie our trees in bunches of 10, and grape-vines in bundles of 50; and we suggest to our patrons to make their orders for assortments as far as possible in multiples of these numbers.

Articles mentioned in this Catalog will be furnished at prices named as follows: Five at the 10 rate; 50 at the 100 rate; 500 or more at the 1,000 rate. Less than five of a variety at the single rate. This does not mean, as an illustration, that 10 pears, 10 apples, 10 plums, 10 nectarines, 10 peaches would be charged at the 100 rate. To secure this rate it will be necessary to order 50 trees of one sort.

If any mistakes are made in filling orders, we will cheerfully rectify the same, but must respectfully request our customers to notify us at once, or, at the most, within ten days after receipt of the goods.

It is difficult to give the actual cost of packing charges accurately, as they will vary according to the size of the trees; however, the figures given are taken from our records of charges for the run of shipments for sizes specified: 6 to 8 ft. trees in bales, \$3.00 per 1,000; 4 to 6 ft. trees, \$2.50 per 1,000; 3 to 4 ft. trees, \$2.25 per 1,000; 6 to 8 ft. trees completely boxed, \$6.00 per 1,000; 4 to 6 ft. trees, \$4.00 per 1,000; 3 to 4 ft. trees, \$3.50 per 1,000.

Grape-vines, in bales, 75c per 1,000 vines; in cases completely boxed, \$3.00 per 1,000 vines.

Deciduous ornamental trees, 6 to 8 ft. and up to 12 to 15 ft., in bales, from 50c to \$1.00 per 100, and completely boxed, \$1.00 to \$2.00 per 100.

Potted plants in from 3 to 6 inch pots, from 3c to 10c each.

Citrus trees, balled, packed in boxes, tops protected with burlap, 10c per tree (boxes hold from 10 to 12 trees); in cases, completely boxed, 20c per tree; naked roots, packed in moss in boxes, tops burlaped, 2c per tree; completely boxed, 3c per tree.

Olive trees, packed in crates, tops protected, $\frac{3}{4}$ to $\frac{1}{2}$ caliper, 35c per 100; $\frac{1}{2}$ to $\frac{3}{8}$, 55c per 100; $\frac{3}{8}$ to $\frac{1}{4}$, 75c per 100; $\frac{1}{4}$ to 1 inch, \$1.00 per 100.

Palms, balled, in boxes, tops burlaped, from 10c to 20c per plant, according to size.

Grape cuttings packed in bales, 50c per 1,000 cuttings, and in cases, completely boxed, 75c per 1,000.

Eucalyptus, Cypress and hedge plants, tops covered with burlap, in flats, 15c per flat.

This data is supplied for the purpose of placing our customers in position to figure out about what their stock will cost them delivered at destination.

WEIGHTS

The general run of deciduous fruit trees, either in bales or cases, averages about as follows: 6 to 8 ft., 2 pounds each; 4 to 6 ft., $1\frac{1}{2}$ pounds each; 3 to 4 ft., 1 pound each; 2 to 3 ft., one-half of a pound each. Grape-vines, one-third of a pound each.

Deciduous ornamental trees from 6 to 8 ft. and up to 12 to 15 ft., 3 to 6 pounds each.

Potted plants in from 3 to 6 inch pots, packed in boxes, weigh from 4 to 12 pounds each.

Citrus trees, balled, packed in boxes, 40 pounds each, and with naked roots, 3 pounds each.

Palms, packed in boxes, with ball of earth, 2 to 3 ft. plants, 40 pounds, and gradually increasing to 110 pounds each on 5 to 6 ft. plants.

Grape cuttings 14 to 16 inches long, 80 pounds to the thousand cuttings, in either bales or boxes.

Eucalyptus, Cypress, about 100 to the flat, 50 pounds per flat; hedge plants from 50 to 100 to the box, according to size, 50 pounds per flat.

SHIPPING

State distinctly how you wish us to ship—by freight or express; also designate the route, otherwise we use our own discretion in forwarding.

The method of packing a shipment of trees or plants is the basis on which freight charges are made. Nursery stock in bales or boxes completely covered with tulle or burlap takes a first-class rate, while in cases completely boxed the third-class rate applies. When trees are shipped without packing, the double first-class rate applies.

In carload lots with a minimum of ten tons, class C applies, and this is as a rule from 50 to 75 per cent less than the first-class rate.

For shipments in California, trees are either packed in bales, wrapped with tulle, or in boxes, tops protected with burlap; for the difference between the first and third-class rates is so slight that nothing would be gained by boxing, as the increased cost would more than offset the saving in freight charges.

To distant points in Texas, Mexico, Colorado, and to other States and countries outside of California, when stock is to be a long time in transit, it is packed in paper-lined cases, not only with a view of having the trees carry better, but also because of the saving in freight charges, the difference in classification being in many cases \$1.00 per 100 pounds.

We have made a very close study of traffic conditions, and our knowledge is used to secure in all cases the very lowest freight rates for the benefit of our customers.

No accurate data can be given as to freight charges on orders for export, except that in a general way a shipment by water to Australia or Japan from San Francisco will cost about one-third less than it does from Fresno to San Francisco, a distance of 206 miles.

Parcel Post: Within a radius of 150 miles of Fresno, orders not exceeding 50 pounds in weight, and outside this zone in the United States or any of its possessions, not exceeding 20 pounds, may be forwarded by parcel post. In ordering by parcel post, remittances must cover articles charged at single rate and postage extra. Refer to table on this page for approximate weights. Parcel postage rates on different weights may be obtained from your postmaster.

After delivering to the carriers we cannot hold ourselves responsible for any loss or injury to trees or plants after they have been carefully packed and shipped, but we will do everything in our power, if any loss should occur, for the protection and recovery of our customer's property.

Square Method—Multiply the distance in feet between the rows by the distance the plants are apart in the rows, and the product will be the number of square feet for each plant or hill; which, divided into the number of feet in an acre (43,560), will give the number of plants or trees to an acre.

Equilateral Triangle Method—Divide the number required to the acre "square method" by the decimal .866. The result will be the number of plants required to the acre by this method.

SPRAY OF APPLES

FRUIT DEPARTMENT

Certain varieties of trees grow stocky, making it impossible to grade them on a basis of their height. We reserve the right on such trees to grade them on a diameter or caliper basis, as follows: The measurements are made one inch above the intersection of the bud with the stock.

1 to 2-inch caliper.....	8 to 10-foot trees	$\frac{3}{8}$ to $\frac{1}{2}$ -inch caliper.....	3 to 4-foot trees
$\frac{3}{4}$ to 1-inch caliper.....	6 to 8-foot trees	$\frac{1}{4}$ to $\frac{3}{8}$ -inch caliper.....	2 to 3-foot trees
$\frac{1}{2}$ to $\frac{3}{4}$ -inch caliper.....	4 to 6-foot trees		

The difficulty of selecting varieties is a problem which no doubt confronts many of our customers, and in order to assist them in this we have placed an asterisk (*) opposite the names of such sorts which rank high in the planting of commercial orchards.

1 year.....2 to 3 ft.	.15	1.40	12.00	100.00

Pear on Quince roots. "Double worked" on Beurre Hardy Pear:

	Each	10	100	1000
1 year.....4 to 6 ft.	\$0.30	\$2.50	\$20.00	\$180.00
1 year.....3 to 4 ft.	.25	2.00	18.00	150.00

It is a recognized fact that a great many varieties of Pears lack affinity when budded on Quince root. Experience has demonstrated the necessity for budding the Beurre Hardy on the Quince, as it makes an unusually strong, perfect union. After the Beurre Hardy are grown they are then budded to the following varieties: Bartlett, Beurre Clairgeau, Crocker Bartlett, Doyenne du Comice, Easter Beurre, Glou Morceau, Madeleine, Seckel, Winter Bartlett and Winter Nelis. This is what is termed "Double Worked" trees. The Quince root causes the trees to become of a dwarfish habit; they bear very much earlier and produce immense crops of fruit when only a few feet high. It is practical to plant them among "standard" orchard trees, and they are also very desirable for home grounds. They can be planted 12 feet apart in orchard form.

- *Bartlett. The leading commercial pear of California for canning, shipping and drying, and more extensively planted than any other. Large; golden yellow, red cheek; thrives in all parts of California. Aug.
- *Beurre Clairgeau. Large; crimson; good shipper. Sept.
- Beurre d'Anjou. Large; russet yellow, shaded with crimson; juicy and delicious; fine for table and market. Sept.
- *Beurre Hardy. Large; greenish, covered with light russet. Flesh buttery. Sept.
- B. S. Fox. Large, greenish-yellow, covered with golden yellow russet. Oct.
- *Crocker Bartlett. (New.) Fruit oblong, acute, pyriform; large; rich golden yellow; netted and overspread with russet. Flesh is yellowish, buttery, juicy, subacid to sweet and rich flavor. Tree vigorous grower. Nov.
- Doyenne d'Alencon. Medium; skin rough yellow, shaded dull crimson. Dec.
- Doyenne d'Ete. Small, yellow, shaded bright red. One of the earliest. July.
- *Doyenne du Comice. Large; greenish yellow, shaded with crimson. As a market pear ranks next to Bartlett. Oct.
- Dana's Hovey. (Winter Seckel.) Skin greenish-yellow, netted with russet. Flesh yellowish, juicy, with rich aromatic flavor. Heavy bearer. Nov.
- *Easter Beurre. Large, roundish; fine-grained; most desirable. Oct. to Jan.
- Flemish Beauty. Large, pale yellow; good bearer; hardy. Sept. and Oct.
- Forelle or Trout. Lemon-yellow with large crimson specks. Sept. and Oct.
- *Glou Morceau. Pale greenish yellow, marked with small green dots; flesh fine-grained, with sugary flavor; fine shipper. Dec.

BARTLETT PEAR

- Howell. Medium; yellow, with minute russet dots. Immensely prolific. Aug.
- *Madeleine. The first early pear. Pale yellow, dotted with brown. June.
- Lawson or Comet. Large; bright crimson on yellow ground; good shipper. June.
- Le Conte. Tree a wonderful grower, with rich, luxuriant foliage. Fruit large, bell-shaped; skin smooth; rich creamy yellow color; fine for shipping and excellent for cooking. July.

P. Barry. Large; yellow; juicy, fine-grained; excellent keeper. Tree vigorous grower and heavy bearer. Dec. to March.

***Seckel.** Highly flavored variety; brownish green with russet brown cheek; flesh whitish, buttery. Aug. to Sept.

***Winter Bartlett.** Large; yellow, slightly russeted on one side; tender, juicy. Flavor almost identical with summer Bartlett. One of the finest winter varieties. Nov.

***Winter Nelis.** Medium; yellowish green, gray-russet dots; flesh yellowish white; excellent shipper. Dec.

CHERRIES

Prices on Mazzard roots:

		Each	10	100	1000
1 year.....	.4 to 6 ft.	\$0.30	\$2.50	\$20.00	\$180.00
1 year.....	.3 to 4 ft.	.25	2.00	18.00	160.00
1 year.....	.2 to 3 ft.	.20	1.80	16.00	140.00

Except Burbank and Abundance—see special prices.

The Hearts, or Bigarreus, are the sweet Cherries, the trees being strong and vigorous growers. These are designated by the letter "H"; the Dukes, or Morellos, which are the sour Cherries, by the letter "D." These grow slowly, the branches are slender; the leaves are thicker, smaller and of a deeper green.

Belle d'Orleans. H. Roundish, heart-shaped, light yellow, flushed with red. May.

***Bing.** H. One of the grandest blacks. Its large size, firmness and delicious flavor have caused it to be in active demand. A thrifty grower and prolific bearer. Middle of June.

***Black Tartarian.** H. An old favorite. Deep purplish black. Late May.

Centennial. H. Pale yellow, marbled and splashed with crimson; flesh firm, sweet. Early June.

Chapman. H. One of the best early market varieties. Deep black; firm. April and May.

Early Purple Guigne. H. One of best. Purplish; tender, juicy, sweet. April and May.

Early Richmond. D. Medium; dark red; juicy; very productive. Middle of May.

English Morello. D. Large; deep red; tree small and slender. July.

Governor Wood. H. Deep yellow, shaded red. Fine for canning and table use. Early June.

Lewelling. H. (Black Republican; Black Oregon.) Large size; black; young and profuse bearer. July.

***Lambert.** H. Its large size, rich, glossy, deep red color, firm flesh, unsurpassed flavor, combine to make it one of the leading market varieties. Middle of June.

May Duke. D. Large; rich dark red. May.

***Napoleon Bigarreau.** H. (Royal Ann.) A magnificent cherry of largest size; pale yellow with bright red cheek; flesh firm, sweet; most popular all-round cherry. Late June.

NEW CHERRIES

On Mazzard roots.

		Each	10	100
1 year.....	.4 to 6 ft.	\$0.50	\$4.00	\$35.00
1 year.....	.3 to 4 ft.	.40	3.50	30.00

"Abundance"

Tree a strong grower and an early bearer of very heavy crops. Fully twice as productive as Royal Ann, fruit larger, handsomer, as firm, better form and color, sweeter and far more delicious, never cracks. When canned, in appearance and color the very best.

"Burbank"

This cherry has been tested by practical cherry growers and its commercial value has been fully established. Ripens earlier than the Early Purple Guigne, and its size, firmness and flavor far surpass that variety. Averages medium to large in size; skin deep purplish black; tree a beautiful grower, vigorous and erect.

LAMBERT CHERRIES

PLUMS

Prices of Plums, General Collection, on Almond, Myroblan and Peach roots:

		Each	10	100	1000
1 year.....	.4 to 6 ft.	\$0.40	\$3.00	\$25.00	\$200.00
1 year.....	.3 to 4 ft.	.30	2.50	20.00	180.00
1 year.....	.2 to 3 ft.	.25	2.00	18.00	150.00

America. Fruit large; skin glossy coral-red; flesh yellow, moderately firm, delicious; one of the most highly flavored plums.

Apple. Deep red with white marbling; large, firm and of fine flavor. Late July.

Bartlett. Yellow, turning to crimson; flesh salmon-colored, firm, juicy. Last of June.

Bavay's Green Gage. (Reine Claude de Bavay.) Large; greenish yellow; juicy. Aug.

***Burbank.** Medium; globular; cherry-red, with lilac bloom; flesh yellow. Late June.

Chalco. Large; cinnabar-red; fine flavor; tremendous grower; prolific. Early Aug.

Cherry. Really identical with the Myroblan Plum, so extensively used as a stock. The variety we offer has been carefully selected. June.

***Climax.** Very large; deep, dark red; flesh yellow, delicious flavor. Tree vigorous and very productive. Middle of June.

***Clyman.** Reddish purple; firm and sweet. Valuable for shipping; very prolific. June.

PLUMS—Continued

- ***Diamond.** Tree wonderful grower and heavy and regular producer. Fruit very large, oblong; dark purple with deep bloom. A splendid shipper. Middle of July to early August.
- ***Giant.** Tree handsome, vigorous grower. Fruit large; flesh yellow; flavor good; freestone. Fine market variety. Late August.
- ***Grand Duke.** Tree regular and prolific bearer. Dark purple; flesh greenish yellow, with rich flavor; fine shipper. Late August.
- ickworth Imperatrice.** Deep purple, with golden fawn tracings; flesh greenish yellow. Sept.
- ***Jefferson.** Large; greenish yellow; one of the best for canning. July to Sept.
- ***Kelsey Japan.** Rich yellow overspread with red; flesh yellow. Its large size and extended period over which it ripens make it invaluable as a shipping plum. Firm. July to Sept.
- President.** An English plum of very recent introduction. Fruit uniform, large and shaped like Yellow Egg. Skin purple; flesh

yellow and of fine texture. Remarkably sweet, with no acidity under the skin. In the Vacaville district it is recognized as the most promising of market plums.

- ***Satsuma.** (Blood Plum.) Large; dark red from skin to pit; firm; ships and keeps well; juicy. Early July.
- Sultan.** Very large, deep purple; flesh dark crimson, firm and sweet. Late July.
- ***Shropshire Damson.** Oval; dark blue; very firm; flesh greenish, juicy and sprightly. Late Sept.
- ***Simon Plum.** (Apricot Plum.) *Prunus Simoni.* Large, cinnabar-red; flesh yellow, with pineapple and banana flavor. Early July.
- ***Washington.** Large; yellow, with crimson blush; flesh yellow, firm, sweet. Fine for canning. Early Aug.
- ***Wickson.** Tree strong, upright grower and heavy bearer. Heart-shaped; flesh amber; juicy. Early Aug.
- ***Yellow Egg.** Showy market variety and good for canning. Large; oval; deep golden; juicy; rather acid. July and Aug.

NEW PLUMS

On Peach and Myrobolan roots:

	Each	10	100	1000
1 year.....	4 to 6 ft.	\$0.50	\$4.00	\$30.00
1 year.....	3 to 4 ft.	.40	3.00	25.00
1 year.....	2 to 3 ft.	.30	2.50	20.00

APEX PLUMCOT. This new fruit ripens with the earliest plums. Tree a strong, compact, upright grower and good bearer even where apricots cannot be grown, and in seasons where some plums are failures. Fruit very large; color deep pink or light crimson, freestone; flesh honey-yellow, firm, rich, aromatic.

SANTA ROSA PLUM

BEAUTY. Another of the new introductions, having been accorded a leading place by the growers of shipping plums. Tree a most remarkably vigorous, upright grower, with large, healthy foliage. Fruit beautiful, oval, crimson with amber-crimson flesh. The largest of the early plums and ripening ten days earlier than Santa Rosa.

***FORMOSA.** A grand shipping fruit. Tree is a vigorous, upright grower with large, cherry-like foliage; fruit of the largest size, heart-shaped and of light cherry-red color. Flesh pale yellow, usually firm, sweet, rich, delicious, with delightful flavor. Ripens July.

***GAVIOTA.** Ripens two weeks after Formosa; is of a deep reddish purple color; flesh honey-yellow; fragrant and sweet to the pit, which is so small in comparison with size of fruit that it might almost be called "seedless."

RUTLAND PLUMCOT. As its name indicates, this new fruit is a cross between a Plum and an Apricot. The tree grows very much like a weeping willow; its long, pendulous branches bend gracefully over. Fruit large, with a deep purple, velvety skin and with a brilliant red flesh with subacid flavor, making it very desirable for cooking, jellies and jams.

SANTA ROSA. Regarded as one of the best of the Japanese type of plums. Very large; deep purplish crimson color, with pale blue bloom. Flesh yellow, streaked and shaded with crimson. As a shipping plum it has few equals. Ripens middle of June.

NEW INTRODUCTIONS

	Each	10	100
1 year.....4 to 6 ft.	\$0.60	\$5.00	\$35.00
1 year.....3 to 4 ft.	.50	4.00	25.00

NEW PRUNE "STANDARD"

This late introduction is a cross between Tragedy and Sugar Prune. It has been tried in a commercial way now for several years, and it undoubtedly has great possibilities as a high-grade Prune.

The trees are heavy bearers, and strong, healthy growers. Well-grown fruits measure four and a half inches around one way by nearly six inches the long way. Skin dark reddish purple, with a heavy blue bloom; flesh honey-yellow, fine-grained, juicy, yet firmer than most other drying prunes. Is very sweet and a perfect freestone.

NEW PRUNE "CONQUEST"

The tree is a vigorous, healthy, rapid grower and unusually productive. The fruit is very similar to the French Prune in form, size and color, with golden, sweet, rich flesh. The stone has been eliminated with the exception of a tiny speck. The fruit is valuable and the tree is very productive. Ripens with the French Prune.

FRENCH PRUNE (IMPROVED)

On Myrobolan and Peach roots:

	Each	10	100	1000
1 year..6 to 8 ft.	\$0.40	\$3.50	\$30.00	\$250.00
1 year..4 to 6 ft.	.35	3.00	25.00	225.00
1 year..3 to 4 ft.	.30	2.50	22.50	200.00
1 year..2 to 3 ft.	.25	2.25	20.00	180.00

This improved type of French Prune was discovered by us at Suisun, Solano County. Years of observation have demonstrated that this new variety is identical in every particular with the French Prune with the exception that the prunes average 30s to 40s from year to year. The marked distinction in the tree is its weeping habit. It produces without fail every year heavy crops of fruits. This demonstration of selection must appeal to every fruit grower.

PEAK'S CLING PEACH

See page 11

***Admiral Dewey.** Identical with Triumph. Large and handsome; the first early yellow-fleshed variety to ripen; a good market sort. Middle June.

***Alexander.** Large; greenish white, shaded deep maroon; juicy, sweet; a standard shipping sort. Early June.

Australian Sauter. Medium; flat; white, shaded crimson; flesh white, sweet. July.

Blyeu's Late. Large; white with blush cheek; flesh white; excellent late shipper. Oct.

Blood Cling. Medium; clouded purplish red; flesh deep red. July.

Briggs Red May. Greenish white, with red cheek; flesh white. Recognized market variety. Middle of June.

Crosby. Orange-yellow, splashed with carmine; valuable for shipping. Late Aug.

***Early Imperial.** Identical with Yellow St. John. Deep yellow, with dark red cheek; flesh juicy and firm. Good for table and shipping. Last of June.

***Elberta.** Very showy and one of the best market and table varieties. Last of July.

***Foster.** Large; yellow, dark red cheek; fine for drying, market or canning. July.

George's Late Cling. Large; yellowish white, splashed with red; flesh firm. Ships well. Sept.

***Hale's Early.** Large; skin greenish, mottled red; flesh white, juicy, sweet. A standard among shipping varieties. Early July.

***Heath Cling.** Very large; creamy white, with faint blush; flesh white; highly flavored and one of the best for canning. Sept.

Late Crawford. Very large; yellow, with red cheek; flavor excellent; dries well. Early Aug.

Levis Cling. Strong grower; fruit deep golden yellow, slightly blushed on one side. Flesh clear yellow to pit; fine-grained, excellent flavor. Ripens before Tuscan Cling.

Levy's Late or Henrietta Cling. Deep yellow, shaded brownish red; of the largest size and one of the best for canning for home use. Oct.

***Lovell.** Leads all other clear yellow freestones; medium to large. One of the best drying and canning freestones. Dries even heavier than the Muir. First week in Aug.

***McDevitt's Cling.** Large; golden yellow; flesh superior flavor. In demand by canners. Aug.

***McKevitt's Cling.** Creamy white, with delicate blush; flesh firm, rich and sugary; as a canning peach it has few superiors. Late Aug.

Morris White. Large; greenish white; flesh firm, sweet and juicy. First of Aug.

***Muir.** Very large; flesh clear yellow, very rich and sweet. The leading drying peach of California; good for canning. Last of July.

Opulent. Originated by Luther Burbank. Medium to large, almost globular; creamy white, with crimson dots and blush; flesh firm, very juicy. Early July.

***Phillip's Cling.** Large; yellow; flesh firm, clear yellow. Always commands the highest market price for canning. Late Aug.

Picquet's Late. Large; skin yellow with red cheeks; flesh yellow. Early Sept.

***Runyon's Orange Cling.** Very large; yellow, with a dark crimson cheek. Early Aug.

***Salway.** Large; flesh deep yellow; rich and sweet. Good for canning and drying. Middle of Sept.

Sellers' Orange Cling. Very large; rich golden. Middle of Aug.

***Sims Cling.** An improved Phillip's Cling. Large to very large; golden yellow, with faint blush; flesh deep yellow, of fine texture, firm and rich; pit small. We regard it as the best clingstone for canning and recommend extensive planting. Ripens middle of Aug.

Sneed. Large, creamy white, with blush cheek; tender, juicy; valuable for early shipping. Middle of May.

Strawberry. Medium white, marbled dark red; flesh white, juicy, with rich flavor; good table sort. Early July.

***Susquehanna.** Large; yellow, nearly covered with red; flesh yellow, sweet, juicy. Aug.

***Tuscan Cling.** (Tuskena; Yellow Tuscan.) Very large; yellow. The best early canning peach; takes the lead over all other peaches in price. Middle of July.

Van Buren Dwarf. Tree very dwarf and ornamental; loaded with fruit when three feet high; fruit medium, yellow shaded red; flesh yellow. Middle of Aug.

***Wheatland.** Very large; yellow, shaded red; flesh yellow; firm, melting, juicy. Aug.

CONNET'S SOUTHERN EARLY. Creamy white, with bright red blush; large, and of fine flavor; vigorous grower. Last of May.

GREENSBORO. Among the earliest and largest. Creamy white, with dainty blush; a wonderfully vigorous grower. May 1.

LEADER. The earliest of all the Muir X Crawford types, ripening near the coast in July. Unusually vigorous trees, which never fail to produce a full crop of beautiful, smooth, globular, bright yellow fruit with deep crimson blush; flesh pure yellow, meaty, firm, very sweet and delicious.

LIBBY CLING. This is another new peach which originated in Selma, and which commences to ripen its fruit shortly after the Peak. In general appearance, the fruit bears a rather close resemblance to the Peak Cling, except that the skin is more highly colored and the flesh is of a somewhat deeper yellow tinge. The fruit is very large. The tree is of an exceptionally robust habit and a very heavy producer. This variety has been planted in a small way for several years and it has been tested sufficiently so that its value as a canning peach with a great future ahead of it cannot be questioned. The Peak and the Libby are two varieties which will undoubtedly stand out prominently as leaders among the canning peaches.

MAYFLOWER. One of the earliest peaches; red all over. Tree a strong grower, late bloomer and heavy bearer. Early May.

NATIONAL. Tree a strong grower and never-failing producer of very firm, nearly globular fruits. Freestone—small stone. Flesh pale yellow, firm, superior quality, far excelling either parent. Ripening two weeks after the "Leader." A firm and most delicious peach when canned, and unexcelled for drying and shipping. Extra handsome and good. A market or home peach.

OKLAHOMA BEAUTY. Extremely large; nearly round, with high color. Among the finest in quality. Specimens measure 8 inches in circumference. May.

OKLAHOMA QUEEN. "Queen of Peaches." Larger than Greensboro in size, and in quality one of the finest early peaches grown. Wonderfully productive. Middle of May.

PEAK'S CLING. Originated near Selma, Fresno County, California. This new variety has so many points in its favor that it is sure to be in heavy demand by canners. The peach averages uniform in size, is almost round, with skin slightly colored where exposed to the sun, but the flesh is clear yellow to the pit. It is fine-grained and of excellent flavor. The pit is very small—a point which appeals very forcibly to those who engage in the canning of fruit. It ripens immediately after the Tuscan and therefore fills a long-felt want, for canners throughout California have for years been seeking just such a peach as this. Its value as a commercial peach has been thoroughly tested out by the canners, and they are very profuse in their praises of this new sort. We take great pleasure in recommending it as worthy of extensive planting. The tree has every appearance of being a Muir and this variety is undoubtedly a seedling developed from the Muir, except that, instead of being a freestone, it is a cling.

***Drake's Seedling.** Regular and abundant bearer, due to its late flowering. Soft shell.

Harriot's Seedling or Commercial. One of the largest of the soft shells, with a sweet kernel. Tree very ornamental.

***I. X. L.** Sturdy, upright grower; nut large; soft shell; bears heavily and regularly. Highly recommended by all orchardists.

Languedoc. One of the best of the foreign varieties grown in California. Nut large; kernel sweet.

***Ne Plus Ultra.** Large and very long; soft shell. A rapid grower and regular, heavy bearer.

***Nonpareil.** Weeping habit and forms a beautiful tree. One of the best. An extraordinarily heavy bearer of the paper-shell type.

Peerless. Preferred by some to I. X. L., which it resembles, but the nut is larger.

***Texas Prolific.** Closely resembles Drake's Seedling. Kernel very plump and of medi-

um size, shell soft, hulls very easily. Never fails to produce a good crop.

The Jordan. The famous Spanish variety so long sought after by nut-growers. Nuts are long, with hard shells; the kernels are superior in flavor, long and plump and filling the entire cavity. A strong grower and heavy bearer.

***EUREKA (New).** Blooms with Nonpareil, usually in full bloom March 1. Nuts mature September 1. The Eureka, on account of the similarity of the kernel in shape and flavor to the famous Jordan, commands the very highest price, and confectioners pay a premium to secure it. It differs in two essentials from the Jordan, being somewhat smaller in size and is a paper-shell. The tree is an exceptionally strong grower and heavy cropper. Originated on the farm of A. M. Newland, Colusa, Cal. His orchard is twenty years old and a failure of crop has never been known. The commercial value of this nut has been established by years of trial.

FRANQUETTE WALNUT

Marron Combale. French; nut large, sweet and highly flavored; glossy foliage.

Marron de Lyon. Similar to the preceding, but the nuts are somewhat larger.

Numbo. Nuts large, handsome, and as finely flavored as any large Chestnut.

Paragon. Tree hardy, very productive; nut large.

Ridgely. One of the hardiest nuts; nut of exceptionally good quality.

Too much cannot be said in praise of the improved types of the Pecans. The Paper-shell types, which we are offering for sale, are so far superior to the common Pecans that they cannot be considered in the same category. The Pecan thrives and produces fine crops of nuts in all localities throughout California, except in the immediate vicinity of the coast, where, on account of the fog and cool breezes, they would be rather late in maturing, and it would, therefore, be inadvisable to plant them except for avenue purposes or specimen trees.

***Frotscher.** One of the best; nuts cylindrical; shell thin, parting from the kernel easily.

Pabst. Nut cylindrical; soft-shell; kernel particularly well filled.

***Stuart.** A standard for commercial orchards; large; good shape and of fine appearance; always well filled; meat of good flavor.

***Success.** One of the largest and best; shell very thin; kernel plump.

Van Deman. Large and oblong in shape; shell thin; kernels plump; good quality.

THE PISTACHIO

American Black. Moderate grower, starting late in the spring. Nut is very hard, with corrugated exterior.

California Black. Rapid growing and desirable as a stock for grafting or budding; adapts itself to all conditions. Nut medium size; hard, smooth shell.

GRAFTED ON CALIFORNIA BLACK

We have practically discontinued the growing of the recognized leading varieties of Walnuts from seed, for the reason of the variation in the seedlings, which even the most careful selection cannot overcome. Standardization of the established varieties can only be maintained by the selecting of grafting wood from trees which are known to be true to their type. Grafted trees worked on the California Black Walnut have so many points in their favor, and one in particular is that they come into bearing several years earlier than the seedlings, making the difference in price in favor of seedling not worthy of consideration.

A'Bijou. (Large-fruited.) Immense in size; the quality of the kernel is excellent.

Chaberte. Good size; kernel extra fine flavor; a good bearer; one of the best.

***Cut-leaved.** A most graceful ornamental tree, particularly adapted to gardens and lawns; foliage deeply cut and laciniated; nut large, round, smooth shell; kernel sweet and well filled; very best quality.

***Franquette.** The standard among walnuts, and commanding a higher price in the market than any other. Nut large, elongated, oval and very attractive in form; kernel full, sweet, with a very rich nutty flavor. Blooms late in spring.

***Mayette.** This ranks with the Franquette as one of the leading commercial varieties. Size large, and unequaled as a dessert nut; an abundant bearer; starts late in the spring.

Mayette Rouge. Identical with the Mayette, except that the nut is reddish.

Parisienne. Large; excellent; starts late. The nut is large and of fine shape.

***Concord.** This popular variety originated from a seedling planted years ago by the father of Mr. George Westcott, in Walnut Creek, Contra Costa County, Cal. The fact that the tree has been a strong grower, enormous bearer, producing large, smooth, round nuts, well filled, has placed it in the front rank as the sort to plant by all Walnut growers in this district. It is certainly worthy of trial in other sections of the State.

***Eureka.** Tree is remarkably vigorous, upright grower, leaves and blooms fully three weeks later than seedlings of the Santa Barbara Soft-Shell, and is therefore very desirable in localities subject to late frosts. An immense producer. Nuts large, elongated, smooth and tightly sealed.

***Neff's Prolific.** A rapid-spreading grower with smooth and clean bark. Blooms late, but ripens its nut early. Nuts large, oval, slightly ribbed and tightly sealed. Trees fifteen years old in orchard form have produced 215 pounds of fine, large nuts. Highly resistant to blight. Especially suited to Southern California conditions.

***Placentia Perfection.** A vigorous grower; commences to bear abundantly about the fifth year after planting. An improved Santa Barbara Soft-Shell.

***Willson.** Originated by F. C. Willson and probably a seedling of the A'Bijou, to which

it bears a very close resemblance as to size, which is exceptionally large. The shell is much smoother. The variety is noted for its precocity, even in the nursery row being loaded with nuts. Valuable for planting in the confines of the home grounds.

Burbank's latest creations in rapid-growing timber trees.

Paradox. It grows fully a third faster than the California Black, is very hardy and free from pests. Produces timber light in color and with fine, compact grain. In cold climates, winter protection should be given the trees for two or three years. Very rarely produces any quantity of nuts.

Royal. A stately, symmetrical tree, with all the good qualities of the California Black, exceeding it by far in its rapidity of growth. The wood is exceedingly hard, close-grained and takes a silky polish, more nearly resembling the tropical mahogany.

All of our fig trees are two years old and are thoroughly ripened up. One-year trees are pithy and do not transplant well.

Bardajic. A magnificent table fig, with rich, deep purple pulp. Aug. and Sept.

***Calimyrna.** Large to very large; lemon-yellow; pulp reddish amber, sometimes pale, turning dark just before falling; seeds large, yellow, fertile, overspread with a clear, white syrup, giving the fruit a richness and meatiness unsurpassed by any other fig. Dries readily, dropping to the ground of its own accord. Aug. to Oct.

Kassaba. Large; almost globular; skin pale green; pulp reddish pink. Sept.

The Smyrna Figs cannot be grown without Capri Figs. The Capri Figs serve as a home for the minute insect *Blastophaga grossorum*, the only insect which can carry the pollen from the Capri Figs to the female flowers of the Smyrna types.

It is necessary to write us as soon as your Capri Figs are four years old for figs containing the fig wasp, *Blastophaga grossorum*. The time for distributing is in April. These figs will be mailed free of charge.

It is necessary to have one Capri Fig tree with every 20 Smyrnas. Even where one Smyrna tree is planted, a Capri Fig tree should be ordered. In plantings of any consequence it is important to have an assortment of Capri Figs. For detailed information regarding the culture of figs and the relation of the Capri Fig to the edible Smyrna varieties, ask for Roeding's "Practical Horticulture on the Fig." It is free.

Capri Howard. Ripens shortly after Capri No. 1. The figs are large and the Profichi crop has an abundance of male flowers, which always mature. This variety is one of the best of the late introductions.

Capri Magnissalis. By far the largest of all Capri Figs and more abundantly supplied with insect galls than any other variety.

Capri Milco. One of the most promising varieties. A good producer of all the crops necessary to perpetuate the insect. Profichi crop rather late in maturing and valuable on this account.

Roeding's Capri No. 1. Very rapid, vigorous grower, maturing its first Profichi figs June 12th, following closely after Roeding's Capri No. 3. Produces an abundance of all crops necessary to sustain the life of the *Blastophaga* insects from year to year.

Roeding's Capri No. 2. Produces an abundance of the Profichi crop and lengthens the season of caprification and is valuable on this account. Its first figs ripen June 16th.

Roeding's Capri No. 3. A decidedly distinct variety. Branches very heavy; closely jointed; a spreading grower; figs very large, heavily ribbed and always abundantly supplied with insects in the Profichi crop. It also carries a good crop of the over-wintering or Mammé figs.

Van Lennep Capri. This variety has been grown by us for a great many years. Introduced from Smyrna by D. Van Lennep, of Auburn, Cal. We regard this variety as one of the best of the Capri Figs. Ripens June 10th.

ADRIATIC CLASS

This class of figs does not require pollination to mature its fruits. They will adapt themselves to a wider range of localities than the Smyrna types.

CALIMYRNA FIGS
See page 14

Bourjasotte Panache. The most ornamental of all fig trees. Fruit medium, green and yellow. Early Aug.

Brown Turkey. The earliest large fig. Color violet-brown. Identical with the so-called Magnolia Fig.

***Mission.** (California Black.) Stands in the lead of all black figs for shipping and drying. Tree a vigorous grower and heavy bearer. Late June and Aug.

San Pedro White (Fico de San Pietro). "Apple Fig." Excellent flavor; skin golden yellow; very palatable. Middle of June.

San Pedro Black. Very large; violet-black; pulp red. Early in Aug.

Verdal Longue (Sultana; Verdal Honde). Very rich, sweet, aromatic. Sept. and Oct.

***White Adriatic.** Fruit large; greenish yellow; pulp carnation-red. Second week in Aug.

***White Endich.** (Kadota.) Medium sized; thin, white skin; pulp white. One of the best for canning and pickling. First week in Aug.

✓ **White Celeste.** A very small fig of amber color, pulp reddish. Fine for preserving and crystallizing. Early Aug.

OLIVES

Our nurseries have been more closely associated with the growing of the Olive than possibly any other concern in the State. Twenty-five years ago we were growing over 30 varieties of Olives. At that time equal attention was being given to both the oil and pickling varieties. Now that it has been demonstrated that a good pickling olive makes an excellent grade of oil in nearly all cases, the elimination of so many varieties has been very pronounced. The demand has dwindled down to a few standard varieties which seem to meet the exacting demands of the firms engaged in the business commercially.

We are devoting our attention particularly to growing the best types of these recognized standards, the cuttings having been taken from our own orchards, of which there are none superior in the State.

We do not grow our trees on Picholine roots except such varieties as will not root readily from cuttings. We are constantly receiving letters inquiring for trees on Picholine roots. Our own orchards and other orchards which have come under our observation, from trees sold by us, have demonstrated that there is no advantage either in the growth of the trees or in their fruitfulness; therefore we have never used this root to any extent. We wish to state to our customers that had we deemed it to their advantage to give budded trees the preference, we would have followed this policy years ago.

Olive trees are sold on the basis of caliper measurement, the heavier the body, the higher the price. In filling orders, we make an invariable rule to cut trees back to three feet or

less and shorten in all the side branches. To insure the life of the trees, it is very essential that this should be done. For detailed information about the Olive, write for copy of Roeding's "Practical Horticulture on the Olive." It is free.

Atroviolacea. Medium size; deep jet-black; a good oil olive. Late Oct.

Chemlaly. (New.) There are several hundred thousand acres of these olives growing in Algiers on arid lands and the orchards are never irrigated. The trees are enormous bearers. The olives are small and only adapted for oil purposes.

Corregiola. Small; high grade for oil. Nov.

Lucques. Crescent-shape; good for oil and pickling. Middle of Oct.

***Manzanillo.** One of the standards for green and ripe pickles. Produces oil of a very high grade. Very hardy, and a regular and prolific bearer. First week in Oct.

Manzanillo No. 2. Valuable for green pickles; rich in oil. Middle of Nov.

***Mission.** Tree a handsome, upright grower, and fine for avenues. Medium to large; excellent pickles; makes a superior oil. Late Oct.

Nevadillo Blanco. Medium; deep black; rapid grower, and makes a pickle of superior flavor, but runs somewhat small in size. Sept.

***Obliza.** Large; borne in clusters on the stems. Excellent for pickles. Middle Oct.

Pendulina. Grows in clusters and produces a high grade of oil. Last of Nov.

Razzo. Oval; medium; yields the finest grade of oil. Last of Nov.

Rubra. Yields oil of highest grade, Early Nov.

SEVILLANO OLIVE

CITRUS FRUITS

There is no variety of fruit trees grown that is so exacting in its demand for favorable soil and climatic conditions as citrus trees. Our nurseries at La Habra, Orange County, California, which are devoted to the growing of citrus and other tropical and semi-tropical fruits, are admirably situated for growing the very best of stock. Intense cultivation and close attention to every detail must be exercised to grow the high-grade citrus trees which we supply to our customers. We make it a point to grow trees on Sweet, Sour and Citrus Trifoliata roots. This last-named root seems to exert a decided influence in causing citrus fruits to mature earlier, the skin to be smoother and the pulp finer grained and with less rag. It is a noticeable fact, and one very important to the grower, that trees on Citrus Trifoliata root are very heavy croppers. We particularly recommend this root for locations where early ripening is an important factor.

Write for special low prices on commercial plantings of more than one hundred trees, of orange, lemon, pomelo, etc. Our stock is unusually fine this year, grown from buds of select strains from trees producing premium fruit, and if you will write us the kinds and varieties wanted, we will quote you by return mail, describing the stock, freight rates, etc.

SPECIAL VARIETIES

	Each	10	100
3 to 4 feet.....	\$1.50	\$12.50	\$100.00

Citron of Commerce. Large, weighing from 3 to 5 lbs.; shaped like a lemon; skin bright yellow, smooth and very glossy. The tree is of a dwarf habit, with large, glossy leaves and very ornamental.

***Bearss Seedless Lime.** Very large; seedless; very juicy, with pronounced acidity. One of the best in cultivation. Hardy, enormously productive, and matures fruit year round.

Mexican Lime. Largely used in California for hedges; fruit large and excellent.

Kumquat. About the size of a large gooseberry; rind sweet, juicy, acid, delicious and refreshing. Tree dwarf and desirable for pot and garden culture. May to July.

***Satsuma.** (Unshiu; Oonshiu.) Deep yellow; flesh very tender, juicy. Oct. to Dec.

St. Michael. Small; round; firm; thin skin; pulp juicy and very sweet. Feb.

***Tangerine.** (Dancy's.) Medium size; very sweet; rind thin and separating readily. March.

Willow-leaved Mandarin. Skin thin; flesh dark orange-yellow, spicy and aromatic. Dec. to Feb. Tree handsome.

New Seedless Lemon. Buds sent to Mr. Roeding from Algiers, and has been fruiting with us for the past four years. Tree a vigorous grower and quite prolific; fruit about the size of the Eureka, but pear-shaped; thin-skinned and very juicy; absolutely seedless.

Ponderosa Lemon. An ornamental type of dwarf habit, adapted to small gardens. Fruit large and abundantly supplied with juice. Of no commercial value.

ALGERIAN CITRUS FRUITS

3 to 4 ft., each \$1.50.

NEW MANDARIN. Buds of this were forwarded to us several years ago by Dr. Trabut, of the French Government Experiment Station, Algeria. The tree is not quite as vigorous as the ordinary Mandarin or Satsuma. It is more of a dwarfish habit and in addition to this is very striking on account of its willow-like foliage, making it a very handsome ornamental tree as well as being a heavy producer of most luscious oranges. The fruit is of the true Mandarin type with a few more seeds. The flavor is

of the best and the fact that it ripens fully a month earlier, combined with the fact that it is exceedingly ornamental, as well as being very prolific, will make it a valuable acquisition for small gardens.

NEW TANGERINE. A vigorous, upright grower like the Dancy Tangerine. The fruit bears very close resemblance to the ordinary Tangerine, is almost seedless and ripens fully three months earlier. It gives promise of being one of the most valuable of our late introductions in the citrus line.

NEW LIME

RANGOON LIME. This is a very valuable Lime, unlike any known to the trade. The fruit has the appearance of a Tangerine, with the same loose skin, but with an intense acid and valuable for the uses that limes or lemons are put to. The tree is a very prolific bearer and a novelty of great value.

***Eureka.** Medium size; sweet; smooth, glossy; abundant acid and very little rag. Popular on account of its heavy summer crop, maturing when Lemons are in greatest demand.

***Lisbon.** Medium size; sweet rind and strong acid; few seeds; a prolific bearer. Very hardy.

***Villa Franca.** Oblong; rind thin, without any trace of bitterness; pulp acid, juicy, nearly seedless. A fine commercial variety.

AVOCADO—Continued

Ganter. A greenish, thin-skinned variety of oblong oval shape. A good sort for garden planting, being a uniform, prolific bearer of fine-flavored fruit from 3 to 4 inches long, ripening in the late fall.

Harman. An extra hardy, pear-shaped, thin-skinned variety, ripening in early winter, having a smooth, rich, nutty flavor. Tree an upright, uniform grower, bearing purple fruits weighing slightly over one-half pound.

Meserve. A round, slightly pear-shaped, thick-skinned variety of greenish color, weighing about one pound, with a tight seed, which, together with its rich, buttery flavor, makes it one of the best for commercial planting. Ripens April to June.

Taft. A pyriform green thick-skinned variety weighing about a pound and ripening in midsummer, with a fine velvety rich flavor. Tree a good, uniform grower, very ornamental.

Wagner. Similar to the Meserve except it ripens later, making them desirable for planting together for a long fruiting period. Good market variety.

Northrop. Purple, thin-skinned, medium size; pear-shaped; rich flavor. Tree very hardy and vigorous. Yields two crops a year. Sept. to Nov. Each 10

Early Red. Earliest variety grown; highly recommended for Southern California planting.

***Premier.** Fruit large, lemon-yellow; flesh melting, juicy and sweet; seeds small.

GRAPES

Our stock of vines on their own roots, Phylloxera-Resistant roots and grafted on Phylloxera-Resistant roots, is very complete. Our vines are grown on new land, causing them to have a fine, vigorous root system.

The vines will be supplied as follows: 500 at the 1,000 rate, where this rate is quoted, in not less than 50 of any one variety; 50 at the 100 rate, in not less than 10 of a variety. In small lots of one or two of a kind, the 10 rate will apply, except in quantities of less than five vines, when the single rate will be charged.

DATTIER DE BEYROUTH GRAPE

NEW GRAPES

FOREIGN TABLE GRAPES OF VERY RECENT INTRODUCTION

	Each	10	100
Price	\$0.50	\$4.00	\$30.00

A few years ago we introduced a number of new varieties of grapes from France. It is only recently that we have observed these varieties sufficiently to feel at liberty to offer them for sale. They have been carefully tested in our trial grounds and their value has been fully determined. Our descriptions and recommendations are made from actual observation for several years.

✓ **Angulato.** A very handsome grape, bluish black, large size, oval. Bunch large, closely set; flesh firm, juicy, sweet and crackling. A good table and market sort. Aug.

✓ **Assoud Zeine.** A fine, showy grape of excellent quality. Bunches loose; berries large and elongated; color dark red. One of the best of the new introductions. Aug.

✓ **Buckland Sweetwater.** A splendid English variety, exclusively grown for table use; bunch medium, compact; berries medium juicy; fine yellow skin when ripe. Aug.

✓ **Black Monukka.** A black seedless grape, similar in size and quality to the well-known Thompson Seedless. Bunches loose; berries deep black and of even size. Extra fine quality. Introduced from India. Sept.

Damas Rose. (Grafted.) This is one of the finest of table grapes. Bunch large, rather compact; berries immense, an inch and over in diameter. When fully matured, deep coppery red in color. For home use this is a very superior grape and we can recommend it highly. Sept.

Dronkane. As a late shipping grape this sort has qualities which will cause it to be in great demand in the interior valleys. Bunches are very large, berries are oval-shaped, compactly set on the clusters. Berries of a metallic red, very firm and highly flavored. Nov.

Foster's Seedling. A strong-growing vine; bunches cylindrical; berries large, long, oval and of a beautiful golden amber color; flesh is very sweet, with a peculiar attractive flavor distinct from other varieties. We regard this as one of the best sorts for home use. Sept.

Gradiska. For home use this is a desirable variety. The bunches are large, heavily shouldered; berries large, greenish white and of excellent flavor. A fine trellis grape and a valuable dessert fruit. Sept.

OLIVETTE BLANCHE

vine is a very strong grower, but the canes are heavier and more closely jointed. The leaves are identical with the parent with the exception that they have much heavier texture. We have propagated this variety for several years and know it comes true to the type. It is worthy of a trial and we can recommend it particularly as an arbor grape.

*Alicante Bouschet. Red; gives a very superior wine; bright in color. Sept.				
Black Malvoise. Bunches large and long; berries large, black, oval. An excellent table grape and a valuable wine variety. Sept.				
*Burger. German; produces a light, white wine of excellent quality. Sept.				
*Carignan. Medium, slightly oblong; makes a superior type of red wine. Vine a fine grower and abundant bearer. Sept.				
*Feher Zagos. Very productive in sandy soils; greenish; a valuable sherry grape. A good grape for interior valleys. Sept.				
*Grenache. Heavy producer in the interior; makes an excellent claret. Always in good demand at the wineries. Sept.				
Mission. Berries medium, round, purple-black, sweet and delicious. Sept.				

*Gros Guillaume. Among the grapes of recent introduction this of the black type is the show fruit of them all. Bunches are of medium size, but berries are as large as Damson Plums, with a coloring when used for table decoration that makes them look as if molded in wax. Flavor the very best. Ripe in early September, but keep well until the middle of October. Enormous producers. Vines should be cane-pruned. Suitable for trellising.

*Joannenc or Lignan. Ripe with us July 1. Much earlier and a far better grape than the White Sweetwater. Bunch medium; berries compact, medium; flesh sweet and juicy; golden yellow when ripe.

*Maraville de Malaga. It is no exaggeration to say that this grape has a coloring of red which is later modified with a bluish tint, which will make it an excellent market variety. Bunches long and loose; berries large, conical, oval. Ripe in September and will keep in the best of condition until the middle of October; flesh crisp and juicy.

*Ohanes d'Almeria. Bunch above average. Berries are a beautiful golden color; fine flavor; good shipper. This variety is imported from Spain in cork dust. Nov.

*Olivette Blanche. As this variety does not ripen until October, it is adapted only to warm climates. The grape is large, fully 2 inches long, never too close; berries long, olive-shaped, greenish amber, slightly brown on side exposed to sun; crisp, firm, with a neutral flavor. Vine very abundantly furnished with foliage and not only produces heavily, but is a vigorous grower. As a market grape and for trellising it is sure to take a prominent place.

*Olivette de Vendemian. This grape bears a very close resemblance to the Almeria so extensively exported from Spain, packed in cork dust, with several important exceptions. Vine stronger grower; bunches and berries larger. In every way a better grape and somewhat earlier in ripening. Oct.

Roeding's Improved Thompson Seedless. This is a sport of the well-known Thompson Seedless. Berries are twice as large. The

ORNAMENTAL DEPARTMENT

LANDSCAPE SERVICE

We shall be pleased to be of service to any who contemplate beautifying their grounds. Get started **early** on your landscape problem. Write now, so that we may help you plan what to plant, when to plant and where to plant.

Landscape plans showing the proper locations for buildings, walks, drives, trees, shrubs, vines and flowers, with the names of each, together with planting list and estimates, are prepared. **NO CHARGE** is made for plans for small grounds. Send for our sketch plan cross-section blank. By filling it out and returning it to us, you will have supplied us with such information that we can offer you valuable suggestions for which there will be no charge.

INSTRUCTIONS. In forwarding data to us for small home lots, the location of the house, garage, walks and drives should be drawn out roughly to a scale of 10 feet to one inch. For larger places, 20 to 40 feet to an inch is a good scale. Always send photographs of buildings and grounds and mark on sketch points from which they are taken.

We are glad to offer suggestions without charge to our customers, but where landscape problems require special visits, detailed plans, and specifications, etc., a charge is made consistent with value of service rendered.

TOWN AND CITY PLANS

Space will not permit us to give more than a very brief description of ornamentals in this catalog. Further descriptions will be supplied upon request. We shall be pleased to quote special prices on larger grades of deciduous trees than those quoted in this list. Before shipping these large trees, we invariably cut them back to 10 feet and shorten in the side branches for the purpose of saving freight charges. When these trees are planted, cut them down to within 8 feet of the ground, shortening lateral branches, thinning out if too thick and cut away entirely to about 6 feet from the ground. To such customers as desire to purchase ornamentals in large quantities, we would esteem it a favor if they would send us a list of their requirements for special quotations.

EVERGREEN TREES

AN AVENUE OF CEDRUS DEODARA

See page 36

We invite inspection of our evergreen stocks, as it often happens we have an assortment of large sizes in specimen plants on which it is difficult to make quotations in this list.

This list includes trees that do not shed all their foliage at one time, thereby remaining green after deciduous trees are bare.

All stock quoted in tubs, cement pots and boxes are specimens which have been well established in their containers.

ACACIAS

Although there are some 400 species of Acacia, we have confined ourselves to varieties of well-known merit, the uses of which are enumerated below. The Acacia finds the

most favorable conditions to its development in California.

EUCALYPTUS

(The Gum Tree)

The tree is a native of Australia and serves a variety of purposes—for example, it is often planted in damp, swamp places, where it acts as a sort of drain, absorbing excess moisture and frequently improving an otherwise malarial locality. The ornamental value of the Eucalyptus is considerable; its merits should not be overlooked.

All varieties planted in flats contain about 100 plants to the flat. As it is necessary to cut the flat in case a smaller quantity is ordered, part flats will be charged at 1½ cents per tree higher than the hundred rate.

Corynocalyx. Beautiful, upright grower; distinct, bright, shiny leaves; timber very durable. A graceful avenue tree.

Crebra (Narrow-Leaved Iron Bark). Extremely hardy; stands great extremes of heat. Wood hard, elastic; very heavy.

Globulus (Blue Gum). Broad, bluish leaves when young. More extensively planted than any other variety; wood when polished resembles hickory. Valuable for wagon work, bridges, tool-handles, and as firewood.

Polyanthema (Red Box). A fine avenue tree; leaves round, silvery; a late bloomer, not subject to drought and cold.

Robusta (Swamp Mahogany). Well adapted to low ground; foliage deep, glossy green; immense clusters of white flowers in fall and winter; desirable for bee-keepers.

Rostrata (Red Gum). Remarkably rapid grower. Wood takes a handsome finish and is desirable for interiors. Called "Red

Mahogany." Valuable for ties, fence posts, etc.

Rudis. An excellent avenue tree, of very rapid growth, and withstands both heat and cold. Wood hard and close-grained.

Tereticornis (Forest Red Gum). Fully as rapid a grower as the *Rostrata*; timber somewhat more durable.

Viminalis (Manna Gum). Very hardy; of rapid growth; fine avenue tree, with long, graceful, festoon-like branches.

PALMS

No plants are more decorative, for indoors or out. The smaller and more tender varieties "set off" interior decorations, while the larger and hardier varieties are invaluable for garden, lawn and avenue. We carry a large stock in boxes, tubs and cement pots, which have been taken from the open ground and are well established. These can be used either for porch decorations or planted out in the open. Such plants give an immediate effect, and never go back, when transplanted.

All marked with an asterisk (*) are for indoors and conservatory decoration.

ARECA Baueri. A graceful and beautiful palm. Foliage bright glossy green; very desirable house palm.

Sapida. More compact grower than the preceding. Pennated leaves heavier and broader. Each

NEWEST IN ROSES

We take pleasure in calling attention to a few varieties of roses which our Mr. Geo. C. Roeding saw in a number of different nurseries while on his recent trip to Europe. Many of these sorts are entirely new and have never been offered for sale before in the United States.

Among the immense list of new roses, it is a source of satisfaction to us to be in a position to offer for sale a few of the very best varieties.

Price\$0.50

Except Mad. Edouard Herriott and Willowmere. See Special Price.

CHATEAU DE CLOS VOUGEOT (H. T.).

The color is varied from a deep velvety scarlet shaded to bright red and then to dark velvety crimson, as the flowers expand. Its fragrance is very pronounced.

ERNA TESCHENDORFF (Dwarf Poly.).

The color is a brilliant carmine red. It is a very free bloomer and it has a permanency of color which has always been lacking in other roses of this family.

EXCELSA (H. Wich.). Flowers double, bright scarlet, produced in clusters; a fine novelty.

EDWARD MAWLEY (H. T.). One of the best of the new roses; flower large, dark velvety crimson, almost continuously in bloom.

FARBEN-KONIGIN (H. T.). The color is a carmine rose, inclined to somewhat deeper color on the outside of the petals; flowers very large and full.

GEO. ARENDS (H. P.). Called by the originator "Red Frau Karl Druschki." Flowers bright red carmine, borne on long stems; an extra good forcing rose.

HEINRICH MUNCH (H. P.). It has every characteristic of the Druschki with the exception that the plants are somewhat stronger growers and the flowers are more striking, both in bud form and when fully open. The petals are beautifully reflexed. Pink.

HELVETIA (H. T.). Fine cut flower rose; inside of petals bright pink, outside fiery red; very free bloomer.

HERZOGIN MARIE ANTOINETTE (H. T.). One of the finest of the yellow roses; buds long, orange gold, opening well.

HIAWATHA (H. Wich.). Flowers rich crimson with white center.

JULIET (Hybrid Briar). A distinct type of rose. It is a wonderful grower, sending up long, strong stems surmounted by flowers of most unique color; the outside of the petals is old gold; the interior, rich rosy red, changing to deep rose as the flowers expand; very large and full; delicious fragrance.

KONIGIN CAROLA (H. T.). Satiny rose with reverse of petals silvery rose. Very free flowering. Even more so than its parent.

LAURENT CARLE (H. T.). Brilliant velvety carmine; flowers very large, of perfect form, not too full, always opening freely.

LIEUTENANT CHAURE (H. T.). Vigorous grower; long buds borne on long stems. Velvety crimson, shaded garnet.

LEUCHTFEUER (Bengal). Among the new roses for bedding or massing, there is probably no variety grown today which is more effective than this rose. Its free-blooming qualities and brilliant blood red color combine to place it among the top notchers.

MADAM JULE GROLEZ (H. T.). A rose of highest quality. Color a beautiful satiny china rose; flowers of large size; very double; of good form and very free flowering. Deserves to be planted extensively.

SUNBURST (H. T.). Few roses have so many favorable points all combined in one plant. Its bronzy foliage; absence of thorns; its long, pointed, orange-yellow buds, becoming deeper towards the center, carried on long, stiff stems, place it in the front rank among the new roses.

RAYON D'OR (H. T.). A vigorous grower, of fine branching habit, with fine bronzy green foliage and oval shaped buds; tinged coppery orange. It is not only very attractive in this form, but equally so when the flowers are expanded, on account of its fine substance and magnificent golden yellow coloring.

WHITE DOROTHY PERKINS (H. Wich.). A sport from Dorothy Perkins; of the same habit as its parent; flowers pure white.

WILLOWMERE (Pernetiana). A very vigorous grower, of erect habit and few thorns; buds long; flowers large, shrimp pink, turning to yellow in center, edges carmine pink. 75 cents each.

MADAM EDOUARD HERRIOTT (Pernetiana). A very strong grower; flowers a unique blending of shrimp pink, copper, orange and apricot. 75 cents each.

LATE INTRODUCTIONS

	Each	10	100
Price	\$0.40	\$3.00	\$25.00

Climbing White Cochet (H. T.). Identical with White Maman Cochet except that it is a climber; flowers white, sometimes suffused with pink.

Dean Hole (T.). Silvery carmine, with salmon shadings. The flowers are large, of great substance and perfect in form, both as a bud and when fully expanded. A wonderful rose.

Dorothy Page Roberts (H. T.). Distinctively a cut-flower rose. Buds large and well formed; color deep shade coppery pink.

Duchess of Wellington (H. T.). Intense saffron yellow, stained with crimson, changing to deep coppery saffron yellow.

Florence Edith Coulthwaite (H. T.). Deep cream, suffused with bright rose; petals reflexed and back delicate orange.

Flower of Fairfield (Poly.). Crimson.

Harry Kirk (H. T.). Color deep sulphur-yellow with a lighter shade on the edges of petals. Flowers large, perfect form, buds long.

His Majesty (H. T.). Dark crimson, shaded deep vermilion edge of petals.

Jonkheer J. L. Mock (H. T.). This stands out as a leader. It is fine in bud, being full and well formed, and is equally good when it opens up. In color, it is a mixture of bright red and salmon pink. As a grower, it is among the best.

Kronprinzessin Cecilie (H. T.). Silvery pink, exquisite form.

Lady Alice Stanley (H. T.). Deep coral rose, inside pale flesh.

Lady Ashtown (H. T.). Very free bloomer and keeps a splendid color; pale rose shading to yellow at base of petals, reflex of petals silvery pink; buds long and pointed; flowers large and full.

Lady Hillingdon (T.). A grand rose for either pot work or garden decoration. Blooms continuously, buds very long, with a most pleasing shade of orange yellow. Particularly fine in the bud state.

Lady Ursula (H. T.). The flowers are large, and of a perfect form; delicately scented, and of beautiful pink color.

Margaret Molyneux (H. T.). Saffron yellow, shaded bronzy carmine.

MARQUISE DE SINETY

Marquise de Sinety (H. T.). This rose inspires enthusiasm as soon as it is seen. It is clear yellow, fading to pale rose at edge of petals, large, full and cup-shaped; very fragrant.

Mary Countess of Lichester (H. T.). Crimson carmine, delicately scented.

Mildred Grant. Color is pearly white, petals edged pink. Blooms size of Paul Neyron. One of the best of the late introductions.

Mrs. Aaron Ward (H. T.). Long buds borne on erect stems. Flowers large; Indian yellow, suffused with salmon rose.

Mrs. E. J. Holland (H. T.). Deep salmon rose, shaded light at edge of petals.

Nita Weldon (H. T.). Ivory white with faint blush on edge of petals.

Pink Cherokee. A California introduction having all the qualities of the White Cherokee, possessing its vigorous growth, beautiful glossy foliage.

Rhea Reid (H. T.). Color varying from rose-cerise to rich crimson-red. Large, full flowers; fine for forcing.

Schnelkopf (Poly.). An exquisite rose of snow-white color, borne on slender, graceful stems like Mlle. Cecile Brunner.

The Lyon (H. T.). Salmon pink, shading into chrome yellow.

Walter Speed (H. T.). A vigorous, erect grower, of a deep lemon-yellow color, becoming white as it develops.

Wellesley (H. T.). Fine shade of pink.

William Shean (H. T.). Purest deep pink, with shell-shaped petals forming extra long buds.
