NOTE:

LATEST 1942 AND 1943 CALIFORNIA BEARING ACREAGE data as reported by the California Crop and Livestock Reporting Service, June 11, 1943 are given in Comparative Summaries, pages 11 and 12 and Grapes, page 66. Substitute these for the preliminary 1942 estimates given elsewhere in the tables on individual fruits.

DECIDUOUS FRUIT STATISTICS 1/

as of January, 1943

Compiled by S. W. Shear 2/

GUIDE TO USERS

Those seriously interested in using this compendium of deciduous fruit statistics will find it helpful to read the following brief comments about the data included and where additional supplementary data may be secured. Users will also find it worth while to read the footnotes to individual tables which briefly describe the data and indicate the original sources.

Purpose--This is the fifth compendium of selected Deciduous Fruit Statistics published as a special mimeographed report by the Giannini Foundation. The data included have been selected as being the most generally useful of a much larger group of statistics that the compiler has found necessary to keep up to date in order quickly to help responsible groups in diagnosing some of the major economic problems of the deciduous fruit industries of the state.

Content--This compendium makes readily available, in one place, selected historical series of statistical data on supply, demand, and prices of fruits, evaluated and briefly described, and conveniently arranged to throw light on the direction or tendencies of the more important economic changes in the California deciduous fruit industries. The data given are mostly for the past fifteen or twenty crop years and deal largely with acreage, production, yields,

1/ Contribution from the Giannini Foundation of Agricultural Economics, Mimeographed Report No. 83 June, 1943.

It is a pleasure to acknowledge the outstanding contribution of Mr. R. E. Blair, Senior Agricultural Statistician for Fruit Crops of the California Crop and Livestock Reporting Service, to this report. Most of the historical series of data on California fruit production, utilization, farm price, and acreage presented herein were taken from published reports on fruit of the Federal and State Crop and Livestock Reporting Service prepared either by him or under his guidance.

2/ Associate Agricultural Economist in the Experiment Station and on the Giannini Foundation of Agricultural Economics, University California.

THE UNIVERSITY OF CHICAGO

[Faint, illegible text]

 

[illegible]

utilization, consumption, shipments, exports, imports, and prices, with special reference to California and the United States. The tables included relate mostly to the ten deciduous fruits grown extensively in California, namely, apples, apricots, cherries, dates, figs, grapes, peaches, pears, plums, and dried prunes. A section on dates is also included although they are not a deciduous fruit.

Comparative Summaries--Some data on all fruits, including citrus, are included in the first section, Comparative Summaries. Rapid scanning of the tables themselves will acquaint one with the nature of the data given in the section on Comparative Summaries. The averages on consumption, production, and utilization in this section were prepared before the published revisions of recent months of production of apricots, cherries, grapes, peaches, and pears, of the Crop Reporting Service were available and hence some of these averages are subject to minor revisions to correspond with the revised data used in the annual series for these fruits in other tables. A few revisions as recent as of June, 1943, have been included in this edition of Deciduous Fruit Statistics.

Exports--Several tables on exports are included to help visualize the importance of our fruit exports to Europe before the present war. Data on United States exports by country of destination for the crop year, 1940-41, are incomplete as their publication was discontinued after March 31, 1941. Publication of both export and import data by individual commodities was discontinued after September 30, 1941. Some export tables are in the section on Comparative Summaries and others in the sections on individual fruits. The comparisons of United States and California fruit production with total exports and with exports to Europe by kinds of fruit and by uses, shown in the section on Comparative Summaries, pages 17-20 are particularly helpful in indicating the relative importance of exports to the fruit industry as a whole and to each fruit during the pre-war period, 1934-1938.

Other Sources--This compendium supplements the extensive body of fruit statistics included in Agricultural Statistics, the statistical yearbook of the United States Department of Agriculture. Of the numerous current reports of the United States Department of Agriculture dealing with fruit statistics, the mimeographed Fruit Situation is of general interest. Some issues of the Fruit Situation and the November, 1942, issue of the Agricultural Situation contain very brief 1943 outlook statements on fruits with some tables and graphs in these and in the supplementary 1943 Agricultural Outlook Charts. More detailed statistics are available in Crops and Markets and in the monthly Fruit and Nut Crop Reports of the Federal and State Crop and Livestock Reporting Service and in the numerous releases and annual summaries on fresh and dried fruits of the Federal-State Market News Service at San Francisco and Sacramento. The most important current official publications in the United States of statistical data on foreign fruit industries are Foreign Crops and Markets published by the office of Foreign Agricultural Relations of the United States Department of Agriculture, Foreign Commerce Weekly published by the United States Department of Commerce and the mimeographed reports on foreign fruit production and markets of the Federal-State Market News Service at Sacramento. A most valuable source of citrus statistics are the three bulletins of the California Fruit Growers Exchange on Statistical Information on (1) the Lemon (2) the Orange, and (3) the Grapefruit Industry.

Acknowledgements--Footnotes on sources and description of data as given in the tables are shortened considerably in order to confine each table to one page. Exact details are available in my files. However, the agency or agencies from which I obtained the data are given credit for their contributions in the source stated at the foot of each table. Those who quote or reproduce data from this report will help to secure more adequate and improved basic statistics if

 

they, likewise, will give proper credit to the specific agency or agencies named in these tables as the original source from which the data have been secured.

Although I take the responsibility for the tables as presented, this compendium is really the joint contribution of many persons and agencies, official and private, engaged in the collection and compilation of economic statistics. I wish again to thank each of the persons and agencies who have generously cooperated in making the data in this report available. I am particularly indebted to Mr. R. E. Blair of the California Crop and Livestock Reporting Service for his very generous cooperation. Most of the historical series of data on fruit production, utilization, farm price, and acreage presented here were taken from published reports of Federal and State Crop and Livestock Reporting Service prepared either by or under his guidance. Miss Valerie W. Smith, formerly Statistical Clerk in the Statistical Laboratory of the Giannini Foundation, deserves much credit for the accuracy of the tables and footnotes which have involved a tremendous amount of detailed, painstaking, thoughtful work in compiling, checking, and documentation.

^{1/} Includes harvested and unharvested production.^{2/} Citrus data are for 12 months beginning November 1 of year indicated.^{3/} Includes oranges, grapefruit, and lemons; excludes limes.^{4/} Preliminary data for 1942.

Sources of data:

Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics,
University of California, largely based on data from United States and California Crop Reports.

Data on deciduous-tree fruits in last two columns from table 6, following.

1/ Total harvested and unharvested production except "plums" cover only harvested sold fresh for canning and fresh consumption including fresh prunes as well as plums, except California includes unharvested production of plums as well as harvested. Prunes cover only dried tonnage but include all unharvested prunes, dried or fresh, all in terms of fresh weight.

2/ Preliminary estimates for 1942.

Sources of data: Compiled by S. W. Shear. Giannini Foundation of Agricultural Economics largely from U. S. and California Crop Reports except apples, 1939-1942; cherries, 1919-1923; and several fruits, 1942, partially unofficial estimates by S. W. Shear

^{1/} Includes harvested and unharvested production. The total of deciduous tree fruits is that for the eight fruits given in table 8. Data in this table on deciduous fruits for some years embody minor revisions published through March, 1943 which were not available when the averages in tables 4, 9, 19 and 20 were made.

^{2/} Citrus data are for 12 months beginning November 1 of year indicated.

^{3/} Includes oranges, grapefruit, and lemons.

^{4/} Preliminary data for 1942.

Sources of data:

Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California, very largely on the basis of data from United States and California Crop Reports.

^{1/} Total harvested and unharvested production. Data in this table on apricots, cherries, and pears, for some years, embody minor revisions published through March, 1943, which were not available when the averages in tables 4, 9, 19, and 20 were made.

^{2/} Merchantable and nonmerchantable.

^{3/} Preliminary.

Sources of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, from latest California and United States Crop reports except apples, 1939-1942 estimated by S. W. Shear.

Cols. 2, 6, and 7: Apples, pears, peaches converted to tons at 48 pounds per bushel.

Cols. 5 and 9: Dry weight converted to fresh by multiplying figs by 3 and prunes by $2\frac{1}{2}$.

1/ Returns for naked fruit at growers' first delivery point, except citrus and for naked fruit delivered at packing-house; averages and annual data are weighted prices.

2/ Citrus data are for 12 months beginning November 1 of year indicated.

3/ Preliminary data for 1942, citrus subject to considerable revision.

Source of data:

Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, by dividing data in table 15 by harvested production as reported largely in reports of United States and California Crop Reporting Services.

<u>3/</u> 1942	60	44	69	148	59	56	64	77	56

1/ Growers' returns for naked fruit at growers' first delivery point.2/ Price of all figs, including merchantable and nonmerchantable, 1919-1923, partly based on unofficial estimates by S. W. Shear.3/ Preliminary.

Sources of Data: Compiled by S. W. Shear, Glenn Foundation of Agricultural Economics, very largely on the basis of reports of United States and California Crop Reporting Services. Col. 1 is weighted average price of fruits shown obtained by dividing data in table 16, col. 1, by harvested production.

1/ Includes exports of dried fruits in salad and of canned fruits in salad.

2/ Percentages computed from data to the nearest 100 short tons.

3/ Less than 500 short tons or less than 0.05 per cent.

Sources of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, largely upon the basis of official data but includes numerous conversions and estimates involving assumptions by the compiler. For annual data comparing production and exports of fruits, see U. S. Dept. Agriculture, Agricultural Statistics, 1941. Numerous detailed footnotes on original table omitted for lack of space.

REPORT OF THE COMMISSIONER OF THE GENERAL LAND OFFICE, ALABAMA, FOR THE YEAR 1900.

ALABAMA HAS TWO DISTRICTS, NORTHERN AND SOUTHERN, EACH WITH ITS OWN COMMISSIONER. THE COMMISSIONER OF THE GENERAL LAND OFFICE, ALABAMA, IS THE HEAD OF THE LAND DEPARTMENT, AND IS RESPONSIBLE FOR THE MANAGEMENT OF THE LANDS BELONGING TO THE STATE.

THE LANDS BELONGING TO THE STATE ARE DIVIDED INTO TWO CLASSES, WATERSHED LANDS AND OTHER LANDS. THE WATERSHED LANDS ARE THOSE WHICH ARE SUBJECT TO THE CLAIMS OF THE UNITED STATES, AND THE OTHER LANDS ARE THOSE WHICH ARE NOT SUBJECT TO SUCH CLAIMS.

THE LANDS BELONGING TO THE STATE ARE DIVIDED INTO TWO CLASSES, WATERSHED LANDS AND OTHER LANDS. THE WATERSHED LANDS ARE THOSE WHICH ARE SUBJECT TO THE CLAIMS OF THE UNITED STATES, AND THE OTHER LANDS ARE THOSE WHICH ARE NOT SUBJECT TO SUCH CLAIMS.

1/ Includes exports of dried fruits in salad and of canned fruits in salad.

2/ Percentages computed from data to the nearest 100 tons.

3/ Less than 500 tons or less than 0.05 per cent.

4/ assumed to be zero.

Source of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, largely upon the basis of official data but includes numerous conversions and estimates involving assumptions by the compiler. Numerous detailed footnotes on original table omitted for lack of space.

1. The following information is being furnished for the purpose of providing a basis for the preparation of the annual report of the Board of Directors of the Corporation for the year ending December 31, 1934.

2. The following information is being furnished:

Apples	352	6,463	7,500	7,404	8,059	8,396

1/ Some preliminary data, 1934 to date, had to be used in tables 31 and 32, and hence preliminary totals are also used in this table for comparability.

2/ Only Canadian imports from United States used for crop years 1924-1939.

3/ Dashes indicate data not reported separately, but included in "other" dried or "other" canned fruits; "other" canned fruit tonnage excluded from this table: 1924-1928, 14,630; 1929-1933, 12,682; and 1934-1938, 6,289.

Source of data:

Compiled by S. W. Shear, Giannini Foundation, from official customs data, largely from reports of the U. S. Department of Agriculture. No export data have been published since those given for 1940-41.

1. The first of these is the fact that the majority of the population of the United States is of European descent. This is a result of the fact that the United States was founded by European immigrants, and the majority of the population of the United States is of European descent. This is a result of the fact that the United States was founded by European immigrants, and the majority of the population of the United States is of European descent.

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

| Apples | 4 | 6,164 | 7,256 | 5,717 | 7,188 |

1/ Some preliminary data had to be used in preparing this table.

2/ Minor estimates involved.

3/ Minor fruits omitted as data unavailable every year; most exports of fresh plums, apricots, and cherries are to countries other than Europe.

Source of data:

Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics from official preliminary customs data. Export data by countries have not been published since March, 1941.

1. The first of these is the fact that the majority of the population of the United States is now living in urban areas. This is a result of the process of urbanization, which has been going on since the beginning of the 20th century. The population of the United States has increased from about 100 million in 1900 to over 200 million in 1950, and the majority of this increase has been in urban areas. This has led to a concentration of population in a few large cities, which has in turn led to a number of problems, such as overcrowding, pollution, and traffic congestion.

1/ Some preliminary data had to be used in preparing this table.2/ United States exports by chief countries of destination are given for most fresh fruits for individual years beginning July 1, 1932-1939 in U. S. Dept. Agr., Agricultural Statistics, 1941, pp. 500 and 501.3/ Data are for years beginning July 1, except data on peaches are for calendar years 1934-1938, plums and fresh prunes and cherries are for calendar years 1936-1938, and apricots are for calendar years 1937 and 1938.4/ Data for Germany include Austria beginning May 6, 1938; Sudeten area as far as ascertainable, beginning November 10, 1938; Czechoslovak provinces occupied by Germany beginning March 18 or 19, 1939; and Memel, beginning March 25, 1939.5/ Partly estimated.6/ Dashes indicate less than 0.5 of a ton.

Sources of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, from official preliminary customs data. Oranges converted at 70 pounds per box; grapefruit at 80 pounds per box; lemons at 76 pounds per box; and apples converted at 1 box = 1 basket = 1 bushel = 48 pounds, and 1 barrel = 3 bushels.

1/ Preliminary.

Source of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, from official data of the U. S. Bur. For. and Dom. Com., as compiled largely by the Office of Foreign Agricultural Relations, U. S. Dept. of Agriculture. Data are not preliminary and hence differ slightly from those in table 21. Conversion factors used: Oranges, 70 pounds per box; lemons, 76 pounds per box; grapefruit, 80 pounds per box; and apples, 48 pounds per bushel and 3 bushels per barrel. No export data have been published since 1940.

1/ Estimates of dried apple production in Northwest not available before 1919. Apples, the only commercial dried fruit of importance in states other than Pacific Coast, averaged in them 27,000 tons, 1909-1913; 10,240, 1919-1923; 10,200, 1924-1928; 7,110, 1929-1933; 3,300, 1934-1938; and 1935-1939, 3,500. See Apples, table 6, for U. S. totals 1919-1942.

2/ Includes merchantable and nonmerchantable figs.

3/ Dried grapes other than raisins are included from 1926 to date.

4/ Preliminary estimates for 1942.

Sources of data: Compiled by S. W. Shear, Giennini Foundation of Agricultural Economics, University of California, largely from reports of Dried Fruit Association of California and of California Cooperative Crop Reporting Service for recent years, and trade estimates from California Fruit News and other sources before 1919.

THE BOARD OF DIRECTORS OF THE COMPANY, INCORPORATED IN THE STATE OF NEW YORK, DO HEREBY CERTIFY THAT THE FOLLOWING IS A TRUE AND CORRECT STATEMENT OF THE FINANCIAL CONDITION OF THE COMPANY AS AT THE CLOSE OF THE FISCAL YEAR ENDING 31st DECEMBER 1914, AND THAT THE SAME HAS BEEN VERIFIED BY THE BOARD OF DIRECTORS AND BY THE AUDITORS OF THE COMPANY.

Sources of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, from weekly issues of California Fruit News as follows, except 1942 are O.P.A. ceiling prices to the trade for figs, prunes, and raisins, and to the government for the other fruits, of which it bought all the 1942 pack:

- Col. 1: Choice dried apples, August-December inclusive.
- Col. 2: Choice Blenheims, July-December inclusive.
- Col. 3: Choice Adriatics, season through December 31.
- Col. 4: Choice Muirs, August-December inclusive.
- Col. 5: Choice Northern Bartletts, season through December 31.
- Col. 6: Monthly prices 50/60's French for crop years weighted by shipments.
- Col. 7: Thompson Seedless, choice bulk, monthly prices for crop years weighted by shipments.

[illegible]

1. The first of the three main types of the system is the "one-to-one" system, in which each user has a dedicated terminal connected to a central computer. This system is simple and easy to use, but it is also expensive and inefficient.	2. The second type is the "multi-user" system, in which several users share a common terminal. This system is more economical than the "one-to-one" system, but it is also more complex and requires more sophisticated software.
3. The third type is the "distributed" system, in which the computer system is distributed across several locations. This system is the most flexible and scalable, but it is also the most complex and expensive.	4. The fourth type is the "hybrid" system, which combines elements of the other three types. This system is designed to meet the specific needs of a particular organization.

Other 7/	--	--	--	--	--	--	1/	1/	1/	5/7/3,300	7/1.6	7/	--	--	--

^{1/} Consumption is production minus exports plus imports, except prunes, raisins, and peaches are U. S. shipments to domestic markets including relief but not diversion, plus imports for raisins. Consumption of individual fruits includes consumption in dried fruit salad, and "total" consumption includes 3,300 tons of "other" fruit exported.

^{2/} Crop year data except apple and "other" exports, and fig and date imports are for years beginning July 1.

^{3/} Exports of individual fruits include estimated exports in dried fruit salad.

^{4/} Almost no dried fruits other than raisins, currents, figs, and dates are imported.

^{5/} Unprocessed weight except apple exports, "other" exports, and date imports. (Data rounded to hundred tons.)

^{6/} Production of California currents is included with raisins and averaged about 1,100 tons.

^{7/} "Other" exports is the total of dried fruits not specified separately in customs reports, including figs, dates, nectarines, dried apple waste (except pomace), and cherries.

^{8/} California production of merchantable and nonmerchantable figs.

Sources of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, largely from reports of the U. S. Dept. Agr., the U. S. Dept. Commerce, and the Dried Fruit Association of California.

1/ Data for 1942 are rough preliminary estimates.

Sources of data: Compiled by the Giannini Foundation of Agricultural Economics, University of California. Pineapple prices are based upon weekly price quotations of fancy grade, f. o. b. San Francisco based on reports in the California Fruit News. Data on other canned fruits are weighted average prices of all grades and sizes of cans on an unadvertised basis and excluding trade discounts, as compiled by H. R. Wellman from canners' reports except 1942 prices are approximate estimates based on quotations reported in the California Fruit News for choice fruit in number 2½ and number 10 cans.

1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2030, 2031, 2032, 2033, 2034, 2035, 2036, 2037, 2038, 2039, 2040, 2041, 2042, 2043, 2044, 2045, 2046, 2047, 2048, 2049, 2050, 2051, 2052, 2053, 2054, 2055, 2056, 2057, 2058, 2059, 2060, 2061, 2062, 2063, 2064, 2065, 2066, 2067, 2068, 2069, 2070, 2071, 2072, 2073, 2074, 2075, 2076, 2077, 2078, 2079, 2080, 2081, 2082, 2083, 2084, 2085, 2086, 2087, 2088, 2089, 2090, 2091, 2092, 2093, 2094, 2095, 2096, 2097, 2098, 2099, 2100, 2101, 2102, 2103, 2104, 2105, 2106, 2107, 2108, 2109, 2110, 2111, 2112, 2113, 2114, 2115, 2116, 2117, 2118, 2119, 2120, 2121, 2122, 2123, 2124, 2125, 2126, 2127, 2128, 2129, 2130, 2131, 2132, 2133, 2134, 2135, 2136, 2137, 2138, 2139, 2140, 2141, 2142, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2150, 2151, 2152, 2153, 2154, 2155, 2156, 2157, 2158, 2159, 2160, 2161, 2162, 2163, 2164, 2165, 2166, 2167, 2168, 2169, 2170, 2171, 2172, 2173, 2174, 2175, 2176, 2177, 2178, 2179, 2180, 2181, 2182, 2183, 2184, 2185, 2186, 2187, 2188, 2189, 2190, 2191, 2192, 2193, 2194, 2195, 2196, 2197, 2198, 2199, 2200, 2201, 2202, 2203, 2204, 2205, 2206, 2207, 2208, 2209, 2210, 2211, 2212, 2213, 2214, 2215, 2216, 2217, 2218, 2219, 2220, 2221, 2222, 2223, 2224, 2225, 2226, 2227, 2228, 2229, 2230, 2231, 2232, 2233, 2234, 2235, 2236, 2237, 2238, 2239, 2240, 2241, 2242, 2243, 2244, 2245, 2246, 2247, 2248, 2249, 2250, 2251, 2252, 2253, 2254, 2255, 2256, 2257, 2258, 2259, 2260, 2261, 2262, 2263, 2264, 2265, 2266, 2267, 2268, 2269, 2270, 2271, 2272, 2273, 2274, 2275, 2276, 2277, 2278, 2279, 2280, 2281, 2282, 2283, 2284, 2285, 2286, 2287, 2288, 2289, 2290, 2291, 2292, 2293, 2294, 2295, 2296, 2297, 2298, 2299, 2300, 2301, 2302, 2303, 2304, 2305, 2306, 2307, 2308, 2309, 2310, 2311, 2312, 2313, 2314, 2315, 2316, 2317, 2318, 2319, 2320, 2321, 2322, 2323, 2324, 2325, 2326, 2327, 2328, 2329, 2330, 2331, 2332, 2333, 2334, 2335, 2336, 2337, 2338, 2339, 2340, 2341, 2342, 2343, 2344, 2345, 2346, 2347, 2348, 2349, 2350, 2351, 2352, 2353, 2354, 2355, 2356, 2357, 2358, 2359, 2360, 2361, 2362, 2363, 2364, 2365, 2366, 2367, 2368, 2369, 2370, 2371, 2372, 2373, 2374, 2375, 2376, 2377, 2378, 2379, 2380, 2381, 2382, 2383, 2384, 2385, 2386, 2387, 2388, 2389, 2390, 2391, 2392, 2393, 2394, 2395, 2396, 2397, 2398, 2399, 2400, 2401, 2402, 2403, 2404, 2405, 2406, 2407, 2408, 2409, 2410, 2411, 2412, 2413, 2414, 2415, 2416, 2417, 2418, 2419, 2420, 2421, 2422, 2423, 2424, 2425, 2426, 2427, 2428, 2429, 2430, 2431, 2432, 2433, 2434, 2435, 2436, 2437, 2438, 2439, 2440, 2441, 2442, 2443, 2444, 2445, 2446, 2447, 2448, 2449, 2450, 2451, 2452, 2453, 2454, 2455, 2456, 2457, 2458, 2459, 2460, 2461, 2462, 2463, 2464, 2465, 2466, 2467, 2468, 2469, 2470, 2471, 2472, 2473, 2474, 2475, 2476, 2477, 2478, 2479, 2480, 2481, 2482, 2483, 2484, 2485, 2486, 2487, 2488, 2489, 2490, 2491, 2492, 2493, 2494, 2495, 2496, 2497, 2498, 2499, 2500, 2501, 2502, 2503, 2504, 2505, 2506, 2507, 2508, 2509, 2510, 2511, 2512, 2513, 2514, 2515, 2516, 2517, 2518, 2519, 2520, 2521, 2522, 2523, 2524, 2525, 2526, 2527, 2528, 2529, 2530, 2531, 2532, 2533, 2534, 2535, 2536, 2537, 2538, 2539, 2540, 2541, 2542, 2543, 2544, 2545, 2546, 2547, 2548, 2549, 2550, 2551, 2552, 2553, 2554, 2555, 2556, 2557, 2558, 2559, 2560, 2561, 2562, 2563, 2564, 2565, 2566, 2567, 2568, 2569, 2570, 2571, 2572, 2573, 2574, 2575, 2576, 2577, 2578, 2579, 2580, 2581, 2582, 2583, 2584, 2585, 2586, 2587, 2588, 2589, 2590, 2591, 2592, 2593, 2594, 2595, 2596, 2597, 2598, 2599, 2600, 2601, 2602, 2603, 2604, 2605, 2606, 2607, 2608, 2609, 2610, 2611, 2612, 2613, 2614, 2615, 2616, 2617, 2618, 2619, 2620, 2621, 2622, 2623, 2624, 2625, 2626, 2627, 2628, 2629, 2630, 2631, 2632, 2633, 2634, 2635, 2636, 2637, 2638, 2639, 2640, 2641, 2642, 2643, 2644, 2645, 2646, 2647, 2648, 2649, 2650, 2651, 2652, 2653, 2654, 2655, 2656, 2657, 2658, 2659, 2660, 2661, 2662, 2663, 2664, 2665, 2666, 2667, 2668, 2669, 2670, 2671, 2672, 2673, 2674, 2675, 2676, 2677, 2678, 2679, 2680, 26

1/ Dashes indicate data not reported separately, but included in "other."

2/ Includes exports for January-June, 1929, only.

3/ Includes exports for January-June, 1931, only.

4/ Preliminary.

Source of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California, from official data of U. S. Bur. For. and Dom. Com., as compiled largely by Office of Foreign Agricultural Relations, U. S. Dept. Agriculture. No export data published since those given for 1940.

1/ No data published for 1941-42 and 1942-43 on pineapple juice; all imported from Hawaii, and the small imports of grapefruit juice from Porto Rico. Trade guesses of the pack of canned pineapple juice for those years are roughly half as much per year as in 1940-41. Canned grapefruit receipts from Porto Rico in recent years have been as follows in thousands of cases: 1936-37, 207; 1937-38, 104; 1938-39, 48; 1939-40, 36; 1940-41, 31.

2/ Includes nectars from apricots, peaches, pears, and fresh prunes (and beginning 1938-39 from nectarines and others), and juices from dried prunes, loganberries, blackberries, cherries, raspberries, strawberries, and apples.

3/ Lemon juice through 1939-40 and other fruit juices, col. 8, are in actual, not equivalent cases.

4/ Dashes indicate data are not available, but would probably be very small.

5/ Preliminary data for 1942-43 and for grape and other 1941-42.

Sources of data:

Compiled by S. W. Sheer, Giannini Foundation of Agricultural Economics, from U. S. Bur. Agr. Econ., 1943 Agricultural Outlook Charts, p. 99, October 1942, and from other reports available to the U. S. Bur. Agr. Econ.

1942	33,200	6,500	57	196	1.06	6,890

1/ Growers' returns for naked fruit at growers' first delivery point.

2/ Nonbearing acres: 1936, 2,688; 1937, 2,693; 1938, 2,495; 1939, 2,294, 1940, 2,171; and 1941, 1,979.

3/ Includes unharvested in bushels: 1932, 220,000; 1937, 600,000; 1938, 124,000; and (unofficial estimates) 1939, 500,000; 1940, 700,000; 1941, 400,000; and 1942, none.

4/ Unofficial estimates by S. W. Shear beginning 1939.

5/ Data beginning 1939 are for commercial counties only.

Source of data: Compiled by S. W. Shear, Giannini Foundation, from latest estimates of the California Crop Reporting Service, except 1939 to date are unofficial estimates by S. W. Shear and cols. 4 and 6 are calculated.

1/ See table 1 for estimates of unharvested production.2/ This is the old commercial production series for apples sold for fresh consumption only and excludes dried, canned, otherwise commercially processed, and consumed on farms where grown. See table 4 for new commercial production series.3/ Converted from dry tons to fresh equivalent by multiplying by $7\frac{1}{2}$.4/ Mostly used for cider, vinegar, and other by-products or wasted.5/ Preliminary unofficial estimates of S. W. Shear beginning 1939.

Sources of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California.

Cols. 1 and 2: Official estimates of United States and California Crop Reporting Service, except unofficial estimates of S. W. Shear beginning 1939. Converted to tons from bushels at 48 pounds per bushel.

Cols. 3 and 5: Calculated from other data in table.

Col. 4: 1916-1922 are trade estimates from California Fruit News. 1923-1940 based largely on packers' receipts as reported to Dried Fruit Association of California. Converted at a drying ratio of $7\frac{1}{2}$ to 1.

1935	2,745	1,600	1,145	408	737	0.47
1936	1,926	1,067	859	260	599	0.60
1937	2,786	1,600	1,186	212	974	0.34
1938	1,113	630	483	114	369	0.46
1939	2,603	1,745	858	190	668	0.32
1940	995	453	542	18	524	0.58
1941	1,453	907	546	3/	3/	0.60
1942 4/	910	465	445	3/	3/	1.70

1/ Excludes tonnage not dried or shipped fresh and following unharvested tons: 1939, 3,000; 1940, 3,500; 1941, 5,000; 1942, 1,000.

2/ Growers' returns for fancy grade excluding cost of package and packing.

3/ Data not available.

4/ Preliminary estimates.

Sources of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California.

Col. 1: Col. 3 plus col. 2; excludes quantity used for cider and vinegar.

Col. 2: Based largely on dried estimates by F. D. Merrill, Calif. Dried Fruit Laboratories converted at an 8 to 1 drying ratio and 45 pounds per box.

Col. 3: Data for 1923-1933 largely from compilations by the Division of Shipping Point Inspection of California State Department of Agriculture. Recent years from reports of managers of special marketing programs.

Col. 4: Data 1923-1926 are rough estimates by S. W. Shear; for 1927-1940 fairly reliable data compiled by best informed factors in the industry.

Col. 5: Col. 3 minus col. 4.

Col. 6: Based upon data from cooperative and private shippers.

1940	140,000	46,000	7,300	114,391	42,220	6,498
1941	155,000	46,000	8,400	122,256	42,672	7,706
1942	160,000	45,000	6,500	127,655	41,268	6,090

1/ Includes quantity unharvested and of no value for years for which any exported.

2/ The new commercial production series given starts in 1934. It covers only commercial apple-producing counties and includes all uses in these counties -- dried, canned, and otherwise processed, as well as fresh consumption. The new estimates of commercial production are smaller than the old estimates of total production but generally larger than the old estimates of commercial production which covered all states but included only apples sold for fresh consumption.

3/ Western states included in total production are Washington, Oregon, California, Idaho, Colorado, Montana, Wyoming, New Mexico, Arizona, Utah, and Nevada, but in commercial production exclude Wyoming, Arizona, and Nevada.

Sources of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California, from United States and California Crop Reports except estimates of total production 1939-1942 are rough unofficial estimates by S. W. Shear.

1/ Preliminary

2/ Nine months only, July 1940-March 1941 as data by countries of destination not published since March 1941. Total exports for July-June were 20,808 tons.

3/ Less than 50 bushels.

4/ Data for Germany include Austria beginning May 6, 1938; Sudeten area as far as ascertainable beginning Nov. 10, 1938; parts of Czechoslovakia beginning March 18 or 19, 1939; and Memel beginning March 25, 1939.

Source of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, from official data of the U. S. Bureau of Foreign and Domestic Commerce, as compiled largely by the U. S. Dept. Agr.; Office of Foreign Agricultural Relations. Converted to tons at 1 box = 1 bushel, 1 barrel = 3 bushels, and 1 bushel = 48 pounds.

1941	17,000	8,500	6,000	2/--	--	--	12.8
1942	21,000	6,700	9,000	--	--	--	19.0

¹/ The United States totals are preliminary estimates beginning 1939 and include rough production estimates for states other than Pacific Coast.

²/ No data published on apples exported in salad, 1919-1922, nor for any exports since 1940.

Sources of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California.

Cols. 1-3: Trade estimates except California data based largely on packer receipts as reported by the Dried Fruit Association of California.

Cols. 4-6: Exports of dried apples and 7 per cent of exports of dried fruit salad, years beginning July 1. Based on official data of U. S. Bureau of Foreign and Domestic Commerce, except salad in 1923-1929 estimated by S. W. Shear based largely on inspections by Dried Fruit Association of California.

Col. 7: Approximate f.o.b. California packers' selling prices for choice as reported in California Fruit News, August to December, inclusive, except 1942 is OPA maximum price for sales to the government of Pacific Coast dried apples of U. S. grade B.

| 1941 | 198,000 | 108,400 | 72,200 | 17,400 | 11,200 | 6,200 | 0.95 |
| 1942 ^{2/} | 199,000 | 114,400 | 65,000 | 19,600 | 14,100 | 5,500 | <u>3/</u> 1.52 |

^{1/}The latest revised estimates of apricot production released by the U.S. Crop Reporting Board, March, 1943 and shown in table 1 are less by 1,000 to 6,000 tons than the older estimates for 1919-1932 used here because no revised utilization data have been published yet. The difference is probably largely in reduced estimates of the tonnage consumed fresh in the state.

^{2/}Preliminary unofficial estimates for 1942.

^{3/}Trice per lug in 1942.

Sources of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California.

Cols. 1-4: From California Crop Reports, except 1922 and 1942, cols. 2-4. Dried converted to fresh at ratio of 5.5 to 1. Cases of 24 No. 2 $\frac{1}{2}$ cans converted 1921-1938 at 55 cases per ton, 1939-1940 at 60.

Col. 5: Col. 4 minus col. 6.

Col. 6: Bases on interstate rail shipments, compiled since 1926 by Federal-State Market News Service; data for recent years from California Crop Reports.

Col. 7: Season's weighted average delivered-auction price New York City and Chicago minus freight, refrigeration, and 7 per cent commission.

^{1/} Export data not published since those given for 1940.^{2/} Apricot exports in salad in 1921 and 1922 excluded as data not available.

Sources of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California.

Col. 1: Based upon reports of the Dried Fruit Association of California and of the California Cooperative Crop Reporting Service.

Cols. 3-5: Exports of dried apricots and 12 1/3 per cent of exports of dried fruit salad, years beginning July 1. Based on official data of U. S. Bur. For. and Dom. Com., except salad, 1923-1929, estimated by S. W. Shear largely from inspections by Dried Fruit Association of California.

Col. 6: Simple average of packers' f.o.b. California quotations (middle of range) on choice Blenheims in 25-pound boxes for six months July 1-December 31, compiled from California Fruit News except 1942 is OFA maximum price to the government which bought all the pack. Permitted prices to the trade were about one cent higher.

1940	2,294	1,815	479	878	269	70	1,416	609	2,025
1941	4,341	4,072	269	2/1,294	276	2/75	2/3,047	1,018	4,065
1942	3,274	2,998	276	2/543			2/2,731		

 $\frac{1}{2}$ Equivalent cases of 24 No. 2 $\frac{1}{2}$ cans.

$\frac{2}{2}$ As stocks on hand December 31, 1941 and 1942 exclude goods sold to the government, the movement for June-December in 1941 and 1942 includes sales to the government not shipped as well as shipments to all outlets, and so stocks are relatively too low and the movement too high as compared with data for the same period in preceding years which are for unshipped stocks only, and actual shipments. Since sales to the government are definite commitments and delivery probably taken in full by June 1, the season's total movement June-May is approximately comparable to previous years.

| 1934 | 100.0 | 15.9 | 25.4 | 41.3 | 58.7 | 37.1 | 21.6 |
| 1935 | 100.0 | 14.7 | 33.3 | 48.0 | 52.0 | 30.0 | 22.0 |
| 1936 | 100.0 | 14.3 | 33.7 | 48.0 | 52.0 | 30.9 | 21.1 |
| 1937 | 100.0 | 18.5 | 30.6 | 49.1 | 50.9 | 26.8 | 24.1 |
| 1938 | 100.0 | 19.4 | 23.4 | 42.8 | 57.2 | 27.4 | 29.8 |
| 1939 | 100.0 | 23.6 | 28.2 | 51.8 | 48.2 | 21.5 | 26.7 |
| 1940 | 100.0 | 12.7 | 21.8 | 34.5 | 65.5 | 31.8 | 33.7 |
| 1941 | 100.0 | 11.4 | 30.0 | 41.4 | 58.6 | 26.2 | 32.4 |
| 1942 | 100.0 | 17.5 | 26.4 | 43.9 | 56.1 | 29.7 | 26.4 |

1/ Additional unharvested tonnages: 1931, 3,000; 1932, 1,500; 1933, 400; 1938, 4,800; 1939, 3,000; and 1942, 5,000.

2/ "Otherwise processed" are nearly all barrelled in brine, mostly Royal Anna.

Source of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California, from California Crop Reporting Service, except utilization data for 1942 are unofficial preliminary estimates.

January, 1943

1941	535	5,500	17.1	10.9
1942	798	8,300	19.2	13.0

^{1/} Includes mixed cars, mostly cherries, of 17 cars in 1937, 37 cars in 1938, 62 cars in 1939, 15 cars in 1940, 19 cars in 1941, and 7 in 1942.

Sources of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California.

Col. 1: 1922-1926, interstate shipments based upon compilation of Pacific Fruit Express, mimeographed form 878. 1927-1942, Federal-State Market News Service, mimeographed reports on interstate shipments of California deciduous-tree fruits.

Col. 2: 1922-1927, col. 1 converted at 8 tons per car. 1928-1942 from table 2, col. 6.

Col. 3: Prices are season's weighted averages of Tartarian, Bing, Royal Ann, Republican, and Chapman.

Col. 4: Calculated by deducting freight, refrigeration, and a 7 per cent sales commission from the auction price in col. 3.

1/ No data for Idaho included since 1930.

2/ Northwest data include some brined black cherries for a few years before 1936, and California in 1935.

3/ No data on barrelled brine pack available before 1924 or 1925, but it was very small.

4/ Rough trade estimates as no reliable statistics available.

5/ Price and 1942 Northwest brined pack are trade estimates.

Sources of data: Compiled by S. A. Shear, Giannini Foundation. Canned pack based on reports of Cannery League of California and Northwest Cannery Ass'n. Cases of 24 no. 2¹/₂ cans converted at 60 per ton except 82 in 1940-1942. Barrelled pack: California from Western Cannery and Packer, Stat. Yearbook, April, 1940, p. 234 and recent releases of Cannery League; Northwest from Northwest Barrelers Ass'n. Converted at 8 barrels per ton.

January, 1943

| 1942 3/ | 90,910 | 87,610 | 33,000 | 54,610 | 21,100 | 31,700 | 1,810 | 3,300 |

^{1/} Data include unharvested tonnage. California given in footnote to table 1. Oregon: 1930, 400; 1931, 2,000; 1932, 2,000; 1933, 700; 1937, 750; 1938, 1,550; 1939, 1,250; 1940, 200; and 1941, 100. Washington: 1929, 2,000; 1930, 1,500; 1931, 2,500; 1932, 4,000; 1933, 2,500; 1934, 2,500; 1935, 1,000; 1936, 800; 1937, 200; 1938, 3,600; 1939, 1,500; 1940, 700; and 1941, 1,000. Idaho: 1934, 500; 1935, 200; 1936, 200; 1937, 300; 1938, 550; 1939, 150; 1940, 300. Data also include in 1941 for Washington 500 tons and for Oregon 900 tons not utilized because of excessive cullage. See table 6 for separate estimates of sweet and sour cherry production.

^{2/} Pacific Coast includes California, Oregon, Washington, and Idaho.

^{3/} Preliminary estimates for 1942.

Sources of data:

Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California, from releases of the United States and California Crop Reporting Services.

| 1936 | 1,796 | 3,970 | 2.21 | 110 | 437 |
| 1937 | 2,202 | 3,630 | 1.65 | 120 | 436 |
| 1938 | 2,513 | 3,527 | 1.40 | 125 | 441 |
| 1939 | 2,896 | ^{3/} 2,596 | ^{3/} 1.80 | 126 | 327 |
| 1940 | 3,055 | 6,200 | 2.03 | 117 | 725 |
| 1941 | 2,965 | ^{4/} 5,560 | 1.88 | 134 | 745 |
| 1942 | ^{4/} 2,960 | ^{5/} 7,500 | 2.54 | ^{5/} 240 | ^{5/} 1,800 |

^{1/} Growers' returns for naked fruit at growers' first delivery point.

^{2/} Nonbearing acres: 1936, 1,500; 1937, 1,046; 1938, 766; 1939, 469; 1940, 325; 1941, 329.

^{3/} About half of estimated 1939 production excluded because of severe damage from rains in September 1939, but included in calculating yield.

^{4/} Preliminary 1942 data.

^{5/} Unofficial preliminary estimates. Production based on Riverside County estimates of Agricultural Commissioner of 7,137 tons.

Source of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California, from reports of California Crop Reporting Service, except unofficial 1942 estimates of production, price and value. Production as given is the delivered weight at the packing house.

| 5/1941 | 11,120 | 100 | 11,200 | | | |
| 5/1942 | 1/14,274 | | | | | |

1/ Riverside County only 1915-1918 and 1942. It produced about 95 per cent of the California crop in recent years.

2/ Arizona data are unofficial and preliminary since 1935 and for 1938 and 1939 are harvested production only; total production was about 250,000 pounds in 1938 and about 500,000 pounds in 1939.

3/ Net imports prior to 1933 are total imports minus re-exports, but beginning 1933 are imports for consumption only. Data not published since 1940.

4/ Data on production are delivered weight at packing house, and imports are declared import weight, mostly dried -- some pitted and some unpitted.

5/ Preliminary estimates.

Sources of data: Compiled by S. W. Shear, Giannini Foundation. Col. 1: 1915-1918 and 1942 from crop reports of Riverside County Agricultural Commissioner. 1919-1941 from reports of California Crop Reporting Service. Col. 2: Estimates from Dept. Horticulture, Arizona Agr. Exp. Station. Cols. 3 and 5: By addition. Col. 4: From official reports of U. S. Bur. For. and Dom. Com. Col. 6: Col. 5 divided by U. S. population figures of January 1.

1/ Gross imports, including re-exports through 1933 and imports for consumption only since 1933.

2/ Declared import weight, mostly dried -- some pitted and some unpitted.

3/ Data for 1925 of 60,866,000 pounds reported in original source as imported from Arabia (including Iraq and Mesopotamia) and for 1926 of 42,830,000 pounds reported as 32,430,000 pounds from Arabia and 10,400,000 pounds from Iraq, all assumed as from Iraq.

4/ Dashes indicate less than 500 pounds or less than 0.05 per cent.

5/ Import data are not published after September, 1941.

Sources of data: Compiled by S. W. Shear, Giannini Foundation, from

1925-1938: Foreign Commerce and Navigation of United States;

~~1939-1941~~ U. S. Dept. Com. monthly mimeographed statements No. 3052.

4/ 1942	34,200	34,677	85	1.0	177	6,150

1/ Total production for all uses. Dried includes merchantable and nonmerchantable. Canning and fresh figs converted to dry weight at 3 to 1 drying ratio.

2/ Returns for naked fruit at growers' first delivery point.

3/ Nonbearing acres: 1938, 1,110; 1939, 1,001; 1940, 764; and 1941, 567.

4/ Data for 1942 are preliminary.

Sources of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California, from reports of the United States and California Crop Reporting Services and Dried Fruit Association of California, except cols. 5 and 6 are calculated and 1919-1923 involve estimates by S. W. Shear for farm value of fresh and canned figs; col. 5 is col. 6 divided by col. 2.

1/ Returns to growers for naked fruit at growers' first delivery point.

2/ Dashes indicate data not available.

3/ Excludes unreported small quantity canned in glass.

Sources of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California.

Cols. 1, 7, 8, and 9: From U. S. and California Crop Reports except 1923 Texas data are unofficial estimates.

Col. 2: 1922-1926 estimates by Ira J. Condit. 1927-1942 based on data of Cannery League of California, plus rough estimates of glass pack in 1937-1942.

Cols. 3 and 4: Computed from other data given in this table.

Col. 5: Computed from col. 2 to nearest hundred tons at 9 tons per car, except 1941 and 1942 at 10½.

Col. 6: Since 1927 from Federal-State Market News Reports, San Francisco, (Misc.)

^{1/} Returns at growers' first delivery point for naked dried fruit, standard and substandard, as given in table 2, col. 3.

^{2/} Partially estimated by S. W. Shear.

^{3/} Dashes indicate no quotations reported.

^{4/} Quotations for two weeks only.

^{5/} Preliminary.

Sources of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California.

Col. 1: From Reports of the California Cooperative Crop Reporting Service.

Cols. 2-5: Simple averages of monthly f.o.b. quotations from opening of new crop through December 31. Based upon California Fruit News, weekly quotations on 50-pound boxes in 1921 and 25-pound boxes since then. 1921-1929, monthly prices are simple averages of range in weekly quotations; 1930-1942, monthly prices are simple averages of the lower of the range of weekly quotations.

^{3/} 1942	29,000	10,900	8,600	2,300	7,200	37.5	29.5	8.0	25.0

^{1/} Total of merchantable and nonmerchantable production or standard and sub-standard grades.

^{2/} Calimyrna estimates may be slightly too low as a larger proportion is usually culls, which are probably less completely and accurately reported by varieties than the merchantable tonnage.

^{3/} Data for 1942 are preliminary estimates.

Sources of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California.

Col. 1: From reports of the California Cooperative Crop Reporting Service, except 1934 data are revised estimates based upon a total of 23,442 tons compiled by the Dried Fruit Association of California.

Cols. 2-5: Estimated by S. W. Shear by applying percentages in cols. 6-9 to total production in col. 1. Data are given to nearest hundred tons only.

Cols. 6-9: Data for 1932-1936 based largely upon data compiled by the Dried Fruit Association of California. 1937-1942 based on data from the California Fig Proration Zone No. 1.

1940	24,100	700	24,800	0.37	70.00
1941	25,000				114.30
1942	5/22,500				5/165.60

1/ Prior to 1927 include small unestimated quantities of nonmerchantable figs.

2/ Data 1919-1932 imports minus re-exports; 1933-1940 imports for consumption.

3/ Growers' returns for naked fruit at growers' first delivery point; prices are for production of all dried figs, as given in table 2, col. 3.

4/ Simple averages.

5/ Preliminary estimates.

Sources of data: Compiled by S. W. Shear, Giannini Foundation.

Col. 1: From reports of Calif. Crop Reporting Service and Dried Fruit Assn.

Col. 2: Based on data from U. S. Monthly Summary of Foreign Commerce.

Col. 3: Col. 1 plus col. 2. Col. 4: Col. 3 divided by U. S. population as of January 1. Col. 5: From the Reports of Calif. Crop Rpt. Service.

1934-1938	2,937	1,324	1,014	541	36	22
	Per cent of total					
Averages:						
1909-1913	100.0	75.9	10.8	3.0	2.1	8.2
1924-1928	100.0	53.2	13.5	7.2	13.5	12.6
1930-1933	100.0	70.2	16.7	8.7	3.9	0.5
1934-1938	100.0	45.1	34.5	18.4	1.2	0.8

1/ Imports are of all figs -- dried, fresh, preserved, etc.; but, as far as is known, imports are practically all dried figs.

2/ Imports for consumption only beginning January 1, 1934; previous data are total imports some of which were re-exported.

3/ Includes only Turkey in Asia in 1923-1925, but Turkey in Europe and Asia both for other years. Most Turkish figs are exported from Smyrna.

Source of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, from official data of U. S. Dept. of Commerce from its reports directly or from U. S. Dept. Agr. Yearbooks. No published data since 1940.

^{1/} Data marked are for calendar years; Algeria for years beginning July 1; all other for approximate crop years beginning August 1.

^{2/} Some low grade inedible or horda figs are included in Smyrna and Algeria data in recent years and may be for earlier years for all countries.

^{3/} Preliminary data; totals in col. 1 for 1936-1938 given in round thousands assuming less than 1,000 tons exported from Spain annually 1936-1938.

^{4/} To June 30, 1936, only. Later data not available.

Sources of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California, from data compiled by Office of Foreign Agricultural Relations, United States Department of Agriculture. Some of these data have been published by the Federal-State Market News Service.

1943 <u>3/</u>	493,100	166,800	79,300	247,000

1/ The chief varieties included in each class by the Crop Reporting Service in accordance with the most usual use for each variety are:

Raisin: Thompson Seedless, Muscat, Sultana, and Zante Currant.

Table: Tokay, Malaga, Emperor, Red Malaga, Cornishon, Almeria, Ribier.

Wine: Zinfandel, Alicante Bouschet, Carignane, Petit Sirah, Mission, Mataro, and several minor black and white varieties.

2/ 1941 nonbearing acres: total, 20,420; wine, 4,804; table, 3,349; and raisin, 12,267

3/ Preliminary estimates for 1943.

Source of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California, from California Crop Reports.

Data for 1942 and 1943 from release of June 11, 1943 by the California Crop and Livestock Reporting Service.

1/ Includes harvested and unharvested production (see tables 6-9).

2/ The chief varieties included in each class by the Crop Reporting Service in accordance with the most usual use are: Raisin: Thompson Seedless, Muscat, Sultanina, and Zante Currant. Table: Tokay, Malaga, Emperor, Red Malaga, Cornichon, Almeria, Ribier. Wine: Zinfandel, Alicante Bouschet, Carignane, Petit Sirah, Mission, Mataro, and several minor black and white varieties.

3/ Unofficial revisions of California production involving data on 1942 commercial crush and dried raisin pack released by Wine Institute and Dried Fruit Association in March, 1943. Preliminary estimates for other states are official.

Sources of data:

Compiled by S. W. Sheer, Giennini Foundation of Agricultural Economics, 1919-1941 from U. S. Crop Reporting Board, Grapes: Revised Estimates of Production, 1909-1941, mimeo. March 1943.

1. The first part of the paper is devoted to the study of the properties of the function $f(x)$ defined by the equation

1. The first part of the document is a letter from the President of the United States to the Congress, dated January 1, 1862. It is a very long letter, and it contains a great deal of information about the state of the country at that time. It is a very important document, and it is one of the most important documents in the history of the United States.

1/ Returns for naked fruit at growers' first delivery point.2/ The chief varieties included in each class by the Crop Reporting Service in accordance with the most usual use are: Raisin: Thompson Seedless, Muscat, Sultan, and Zante Currant. Table: Tokay, Malaga, Emperor, Red Malaga, Cornichon, Almeria, and Ribier. Wine: Zinfandel, Alicante Bouschet, Carignane, Petit Sirah, Mission, Mataro, and several minor black and white varieties.3/ Preliminary 1942 data; partly based on unofficial production estimates.

Sources of data:

Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California, based on official reports of California Cooperative Crop Reporting Service.

1/ Excludes unharvested tons: 1927, 98,600; 1928, 153,000; 1930, 433,000; 1931, 10,000; 1932, 154,000; 1933, 3,000.

2/ Dried wine and table grapes (see tables 8 & 9) included probably finally used for juice, also a few raisins.

3/ Averages do not equal the sum of similar averages, tables 7-9, due to minor adjustments in subtotals.

4/ Unofficial revisions of production and utilization involving data on 1942 commercial crush and dried raisin pack released by the Wine Institute and the Dried Fruit Association in March, 1943.

Sources of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics. Largely based on reports of

California Crop Reporting Services and of Federal-State Market News Service, except fresh juice and table stock in all years, commercial crush 1927-1929 and harvested 1927 and 1929 estimates by S. W. Shear.

5/1942	1,276,000	16,000	1,016,000	147,000	95,000	52,000	89,000	8,000	97,000

1/ The chief varieties included are Thompson Seedless, Muscats, Sultanes, and currants. Excludes unharvested tons: 1928, 60,000; 1930, 319,000, of which 316,000 were purchased but left on the vine; and 1932, 21,000.

2/ In addition to total fresh grapes used for juice (col. 4) roughly 36,000 fresh tons a year of dried raisins were used for alcoholic beverages, 1927-1932. Much fewer raisins probably have been used thus since repeal.

3/ Includes small amounts estimated used in state for home wine making 1927-1932 (col. 4 minus cols. 5 and 6).

4/ Interstate juice shipments as shown are largely Muscats, of which a few are eaten fresh.

5/ Unofficial revisions of production and utilization involving data on 1942 commercial crush and dried raisin pack released by the Wine Institute and the Dried Fruit Association March 6, 1943.

Sources of data: Compiled by S. W. Sheer, Giannini Foundation. Largely based on reports of California Crop Reporting Service and of Federal-State Market News Service, except fresh juice and table stock in all years, and commercial crush in most years partially estimated by S. W. Sheer.

| 1941 | 482,000 | 3,800 | 245,300 | 243,000 | 2,300 | 198,200 | 34,700 | 232,900 |
| 4/1942 | 410,000 | 8,600 | 178,000 | 175,000 | 3,000 | 184,000 | 39,400 | 223,400 |

1/ Chief varieties included in table grape production are Tokay, Malaga, Emperor, Red Malaga, Cornichon, Almeria, Ribier and Concord. Data given exclude the following unharvested tonnages: 1927, 98,600 (estimate by S. W. Shear); 1928, 75,000; 1930, 74,000; 1932, 108,000; and 1933, 3,000.

2/ Dried table grape varieties presumably are used for juice purposes eventually.

3/ Probably very few table grape varieties are used for home wine making in California and all intrastate use as given in col. 7 assumed as used for fresh table purposes.

4/ Unofficial revisions involving data on 1942 commercial crush released by Wine Institute, March 6, 1943.

Sources of data: Compiled by S. W. Shear, Giennini Foundation. Largely based on California Crop Reports and Federal State Market News Reports, except fresh juice and table stock in all years, commercial crush in most years, and harvested production 1927 and 1929 partially estimated by S. W. Shear.

1/ Chief varieties included in wine grape varieties by the Crop Reporting Service in accordance with the most usual use are Zinfandel, Alicante Bouschet, Carignane, Petit Sirah, Mission, Mataro, Grenache, Golden Chasseles, Burger, Colombar, and Franken Riesling. Presumably all California grapes so classified as strictly wine varieties, including those dried, are crushed commercially or otherwise used for wine, brandy, and other juice purposes and practically none consumed for fresh table use.

2/ Excludes unharvested tonnages: 1928, 18,000; 1930, 40,000; 1931, 10,000; and 1932, 25,000.

3/ Unofficial revisions of production and utilization involving data on 1942 commercial crush released by the Wine Institute, March 6, 1943.

Sources of data:

Compiled by S. W. Shear, Giannini Foundation. Largely based on reports of California Crop Reporting Service and Federal-State Market News Service, except commercial crush in most years partially estimated by S. W. Shear.

^{1/} Rail shipments of other states omitted because a large proportion is now shipped by truck (see production, other states, table 2, col. 2.)

^{2/} Classified according to chief purpose for which shipments are used in eastern markets. Fresh interstate Muscat shipments are used chiefly for juice but include the few used for table purposes.

^{3/} Shipments for 1925 and 1926 are subject to revision.

Sources of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California.

Cols. 1, 3, and 5: Include some estimates by S. W. Shear in earlier years but 1927-1942 data from Federal-State Market News Service reports.

Cols. 2, 4, and 6: Delivered auction prices since 1924 compiled from Federal-State Market News reports and are weighted average prices of eleven markets (except table grapes 1921-1923 for New York only) for principal varieties included in each class. Prices in col. 2 are for Cornichon, Malaga, Red Malaga, Tokay, Emperor, and Thompson Seedless; and in col. 4 for Alicante, Carignane, Mataro, Mission, P. Sirah, and Zinfandel.

[illegible]

1. The first part of the document is a list of names and addresses, which are arranged in a columnar fashion. The names are written in a cursive script, and the addresses are written in a more formal, printed style. The list appears to be a directory or a roster of some kind.

2. The second part of the document is a series of short, handwritten notes or entries. These notes are written in a cursive script and are arranged in a columnar fashion, similar to the first part. The notes appear to be a record of some kind, possibly a log or a journal.

3. The third part of the document is a series of short, handwritten notes or entries. These notes are written in a cursive script and are arranged in a columnar fashion, similar to the first part. The notes appear to be a record of some kind, possibly a log or a journal.

4. The fourth part of the document is a series of short, handwritten notes or entries. These notes are written in a cursive script and are arranged in a columnar fashion, similar to the first part. The notes appear to be a record of some kind, possibly a log or a journal.

5. The fifth part of the document is a series of short, handwritten notes or entries. These notes are written in a cursive script and are arranged in a columnar fashion, similar to the first part. The notes appear to be a record of some kind, possibly a log or a journal.

6. The sixth part of the document is a series of short, handwritten notes or entries. These notes are written in a cursive script and are arranged in a columnar fashion, similar to the first part. The notes appear to be a record of some kind, possibly a log or a journal.

7. The seventh part of the document is a series of short, handwritten notes or entries. These notes are written in a cursive script and are arranged in a columnar fashion, similar to the first part. The notes appear to be a record of some kind, possibly a log or a journal.

8. The eighth part of the document is a series of short, handwritten notes or entries. These notes are written in a cursive script and are arranged in a columnar fashion, similar to the first part. The notes appear to be a record of some kind, possibly a log or a journal.

9. The ninth part of the document is a series of short, handwritten notes or entries. These notes are written in a cursive script and are arranged in a columnar fashion, similar to the first part. The notes appear to be a record of some kind, possibly a log or a journal.

10. The tenth part of the document is a series of short, handwritten notes or entries. These notes are written in a cursive script and are arranged in a columnar fashion, similar to the first part. The notes appear to be a record of some kind, possibly a log or a journal.

^{1/} Support price of A.M.A. and maximum price fixed by O.P.A. for 1942 crop.

Sources of data:

Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California.

Cols. 1 and 2: Weighted average prices of natural raisins for the regular trade (excluding sales of bleached and of surplus for distilling and other by-products) paid growers by Sun-Maid 1913-1924 and by Sun-Maid and other packers for other years. Data 1932-1941 are estimates subject to minor revision based upon Raisin Market Information Bulletins of the Federal-State Market News Service, Sacramento, California, and reliable confidential trade information.

Cols. 3 and 4: Computed from cols. 1 and 2 by dividing by 3.75.

6. 1994-2001: The period of the 1994-2001 period is characterized by a significant increase in the number of cases of HIV/AIDS, which is reflected in the data of the National Institute of Health (NIH) and the Centers for Disease Control and Prevention (CDC). The number of cases increased from 1,000 in 1994 to 1,500 in 2001, with a significant increase in the number of deaths. The data of the NIH and the CDC show that the number of cases increased from 1,000 in 1994 to 1,500 in 2001, with a significant increase in the number of deaths. The data of the NIH and the CDC show that the number of cases increased from 1,000 in 1994 to 1,500 in 2001, with a significant increase in the number of deaths.

1941 4/	205,000	162,000	158,000	4,000	47,000	43,000			6.0

1/ Exports include lend-lease shipments in 1940 and 1941.

2/ Shipments given exclude about 15,000 tons of Muscats used by distillers in 1933; 5,000 tons off-grades into by-products in 1935; and 52,000 tons from 1938 crop into stock feed or brandy in 1938 and 1939. Data include tons shipped for relief: 1937, 15,000; 1938, approximately 10,000; 1939, 45,000; 1940, 33,000; 1941, 9,000.

3/ Prices 1921-1923 are for all raisins as prices of Thompson Seedless separately are not available.

4/ Estimates for 1940 and 1941 are preliminary. No official data published on exports.

Sources of data: Compiled by S. W. Sheer, Giannini Foundation of Agricultural Economics, Monthly water and rail shipments from California plus estimated state consumption. Exports from U. S. Monthly Summary Foreign Commerce. Domestic shipments computed by subtraction. Prices 1921-29 based on actual sales of packers; later years on California Fruit News quotations choice bulk Thompsons, weighted by monthly shipments lagged.

1/ Raisin production given includes additional small tonnage of currents produced in California (see table 15) and Union of South Africa (less than 1,000 tons).

2/ Data for 1942 are preliminary. No data available for Greece for 1941 and 1942.

Sources of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California. California, from California Crop Reports, exclude dried grapes other than raisin varieties. Foreign production largely from reports of Office of Foreign Agricultural Relations, U. S. Dept. Agr. released currently by the Federal-State Market News Service at Sacramento.

1/ Blanks indicate data not yet available.

2/ Rough preliminary estimates.

Sources of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California.

Cols. 1 and 6: Compiled jointly with R. E. Blair, California Cooperative Crop Reporting Service.

Cols. 2, 3, and 4: From California Cooperative Crop Reporting Service.

Cols. 5, 8, 9, and 11: Calculated from data in other columns.

Col. 7: Based on stocks of packers handling a large majority of the currants.

Col. 10: Based on official releases of the U. S. Bur. of For. and Dom. Commerce.

1. The first part of the document is a list of names and addresses of persons who have been convicted of crimes in the State of New York. The names are listed in alphabetical order, and the addresses are given in full. The list is divided into two columns, with the names in the left column and the addresses in the right column.

2. The second part of the document is a list of names and addresses of persons who have been convicted of crimes in the State of New York. The names are listed in alphabetical order, and the addresses are given in full. The list is divided into two columns, with the names in the left column and the addresses in the right column.

1/ Includes imports through 1940 which averaged, 1933-1940, 2,936,000 gals. or 3.1% of consumption, about half dry and half sweet. 2/ Estimates 1933 and 1934 by S. W. Shear. 3/ Preliminary estimates for 1942 based on rate of movement through Mar., 1943.

Sources of data: Compiled by S. W. Shear, Giennini Foundation. Cols. 1, 2, 4, 7, 10-12: Calculated from data in other columns. Cols. 3 and 5: Sum of domestic tax-paid withdrawals and U. S. imports. Cols. 6 and 9: Homemade or basement wine estimated at 150 gallons per ton from California grapes so used, but not for grapes produced in other states. Very little homemade wine was consumed before prohibition. U. S. per-capita consumption of commercial wine 1909-1913 averaged about 0.5 gallons of which 0.2 was sweet and 0.3 dry. Col. 8: Based on Wine Institute, annual Wine Industry Statistical Surveys, except 1942 estimated.

6/1942	13,821	15,000	28,821	20,000			300				

1/ An average of about 99 per cent of California brandy is grape.

6/ Rough estimates for 1942 except stocks.

2/ Stocks in California special and bonded warehouses, 1890-1918; but only in bonded warehouses, 1933-1942.

3/ Includes annual exports of from 1 to 319 thousand gallons, 1890-1918, and less than 500 gallons, 1933-1937.

4/ The small quantities of California brandy used for fortification in other states are not available separately 1890-1918, but included in disappearance of beverage brandy.

5/ Large quantities of fortifying and beverage brandy were made under the Wine-Grape Prorate Program in 1938.

Sources of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, 1890-1918 based on Shear, S. W. and G. G. Pearce, Supply and Price Trends in the California Wine-Grape Industry, Table 35, June 1934; 1933-1942 based on data of Bureau Internal Revenue, except cols. 8 and 10 from the Wine Institute.

1/ Includes unharvested tonnage, if any, as shown separately in tables 2 and 3 following.

2/ Growers' returns for naked fruit delivered at growers' first delivery point.

3/ Condition for all California peaches in 1928, 87 per cent; 1929, 44 per cent.

4/ Nonbearing acreage 1941: Clings, 11,811; Frees, 6,111.

Source of data: Compiled by S. W. Shear, Giannini Foundation, from California Crop Reporting Service, except cols. 4 and 6 calculated.

January, 1943

1/ Includes quantities purchased but not harvested under industry control programs: 1930, 148,300 tons; 1931, 94,500 tons; and 1933, 33,700 tons.

2/ Includes estimates of small quantities used fresh on the farm.

3/ Preliminary 1942 estimates; utilization data are unofficial estimates.

Sources of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California, from releases of the California Cooperative Crop Reporting Service, except 1942 utilization.

| 1938 | 1,276,100 | 784,100 | 492,000 | 179,000 | 313,000 |
| 1939 | 1,521,300 | 938,300 | 583,000 | 211,000 | 372,000 |
| 1940 | 1,367,500 | 801,500 | 566,000 | 213,000 | 353,000 |
| 1941 | 1,784,700 | 1,238,700 | 546,000 | 214,000 | 332,000 |
| 2/1942 | 1,573,200 | 909,200 | 664,000 | 243,000 | 421,000 |

^{1/} Includes California unharvested tonnage shown in tables 2 and 3 and in "other states": 1926, 33,600; 1928, 25,000; 1931, 10,000; 1932, 2,000; 1938, 6,000; 1939, 12,000; and 1941, 31,700. Nearly all peaches produced in "other states" are freestones and are shipped fresh as practically no peaches are dried commercially in other states and an average of only about 8,900 tons were canned in "other states," 1936-1940. Also includes in 1940 1,344 tons harvested in Virginia but not used and 1,440 tons in Colorado diverted from marketing channels.

^{2/} Preliminary estimates for 1942.

Sources of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California, from latest official reports of the United States and California Crop Reporting Service. Data for "other states" than California from Peaches: Revised Estimates of Production, 1909-1940 (mimeographed release, August, 1942) converted from bushels at 48 pounds per bushel and rounded to nearest hundred tons.

1942	2,800	20,600	23,400					16.3

1/ Peach exports in salad are excluded in 1921 and 1922 as data not available.

Sources of data : Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California.

Cols. 1-3: 1921-1933 from reports of the California Cooperative Crop Reporting Service. 1934-1940 are reliable trade estimates. Almost no clingstones were dried before 1931 and data are not available.

Cols. 5-7: Exports of dried peaches and 21 per cent of exports of dried fruit salad, years beginning August 1. Based on official data of United States Bureau of Foreign and Domestic Commerce, except salad in 1923-1929 estimated by S. W. Shear largely on inspections by Dried Fruit Association of California.

Col. 8: Average of weekly quotations in the California Fruit News, for August through December, except 1942 are OPA maximum prices for sales of choice yellow freestones to the Government which bought all the dried pack. Permitted prices to the trade were 0.815 cents higher.

1942	13,991	957	14,948						60.00

1/ Include freestones and clingstones pack shown separately in table 9. Exclude pickled, see footnote, table 9.

2/ Pack and total shipments include some, but exports exclude all, peaches repacked into salad and cocktail.

Sources of data: Compiled by Giannini Foundation of Agricultural Economics, University of California.

Cols. 1, 2, and 4: Based upon mimeographed releases of Canners League of California.

Col. 6: From Monthly Summary of Foreign Commerce of United States, converted at 45 pounds per case.

Col. 8: Weighted average prices of clingstones of all grades and sizes of cans on an unadvertised basis and excluding trade discounts, as compiled by H. R. Wellman from canners' reports.

Col. 9: The usual or "going" price generally paid growers by canners for No. 1 canning clingstones, making no allowance for term contracts or sales of lower grades or sales for other uses than canning.

1940	1,134	9,608	10,742	13,706	2,964	5,304	953	66	8,402	4,351	12,753
1941	2,152	10,581	12,733	13,686	953	2/ 4,294	957	2/ 74	2/ 9,392	2/ 4,337	12,729
1942	1,089	12,902	13,991	14,948	957	2/ 4,010			2/10,938		

1/ Excludes pickled clingstone peaches, in cases: 1936, 115,619; 1937, 111,280; 1938, 24,944; 1939, 195,681; 1940, 156,665; 1941, 187,014; 1942, 58,906.

2/ As stocks on hand December 31, 1941, and 1942, exclude goods sold to the government, movement for June-December in 1941 and 1942 includes sales to the government not shipped as well as shipments to all outlets, and so the stocks are relatively too low and the movement too high, as compared with data for the same period in preceding years which are for unshipped stocks only and actual shipments. Since sales to the government are definite commitments and delivery probably taken in full by June 1, the season's total movement June-May is approximately comparable to previous years.

Source of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California, largely on the basis of data from mimeographed releases of the Cannery League of California.

Reclamation is a process of land development and water control. It involves the construction of dams, levees, and other structures to manage water resources. The process is often carried out by the Federal Reclamation Service, which is part of the Department of the Interior. The service is responsible for planning, designing, and constructing reclamation projects. These projects can include the construction of dams, levees, and other structures to manage water resources. The process is often carried out by the Federal Reclamation Service, which is part of the Department of the Interior. The service is responsible for planning, designing, and constructing reclamation projects. These projects can include the construction of dams, levees, and other structures to manage water resources.

4/1942	753	507	232	275	239	139	100	14	254

1/ Excludes from Oregon and Washington 1935, 1937-1941, 1,350 to 15,150 tons a year harvested but not utilized due to excessive cullage.

2/ Pacific Coast canned are all Bartlett's except California includes other varieties, tons: 1935, 400; 1936, 500; 1937, 500; 1940, 10,400; 1941, 10,800; 1942, 11,000.

3/ California dries nearly all the commercial dried pears in the U. S. These were all Bartlett's except 200 tons of other varieties in 1936 and 100 tons in 1940.

4/ Preliminary 1942 estimates.

Sources of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, largely from United States, California, and Oregon Crop Reports, supplemented by canned pack statistics, converted at 38 cases per ton.

1/ Prices are for whole boxes only, except cols. 3-8 in 1922-1925 also include prices of half boxes in equivalent whole boxes.

Sources of data:

Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California.

Col. 1: Delivered auction prices in col. 2 minus freight and refrigeration charges and a commission of 7 per cent.

Col. 2: Computed directly or indirectly from daily reports of each auction market; recent years largely from Federal-State Market News Service reports and compilations by other offices of the U.S.D.A.

Cols. 3-8: Based on daily issues of the New York Daily Fruit Reporter; data for 1926-1936 compiled by U. S. Bur. Agr. Econ., Division of Statistical and Historical Research. Prices in col. 3 are weighted average prices of Oregon and Washington pears.

1942	--	--	--	3,060	1,636	1,424	6/9,514	962

1/ Includes carlots of "mostly pears" 1937-1942.

2/ Includes interstate and intrastate rail shipments.

3/ June, July and August exports are nearly all California Bartlett's and Hardys, and California interstate shipments in these months are very largely Bartlett's.

4/ Dashes indicate data not published

5/ Total includes pears originating north of Roseville of 8 cars in 1931 and 5 cars in 1932 which are not included in cols. 5 and 6 for these years.

6/ Northwest shipment through May 8, 1943.

Sources of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California.

Cols. 1-3: From U.S. Monthly Summary of Foreign Commerce.

Cols. 4-8: From reports of Federal-State Market News Service.

1/ Preliminary data for nine months only, July, 1940-March, 1941, as data by countries of destination not published for later months. Total exports for July, 1940-June, 1941 were 11,783 tons.

2/ Dashes indicate less than 0.5 tons.

3/ Germany includes Austria beginning May 6, 1938, and parts of Czechoslovakia and Memel acquired since then.

Sources of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California, from official data of U. S. Bur. of For. and Dom. Com. largely as compiled by Office Foreign Agricultural Relations, U. S. Dept. Agriculture, and U. S. Dept. Agriculture, Agricultural Statistics, 1935 and 1942.

¹/Exports exclude pears in canned fruit salad and cocktail, but pack and shipments include some California pears repacked into salad and cocktail.

²/Preliminary data for 1942.

³/Dashes indicate data not available, as no export data published since those for 1940.

Sources of data: Compiled by the Giannini Foundation of Agricultural Economics.

Cols. 1, 2, and 4: From records of canners cooperating through Canners League of California and Northwest Canners Association, except Pacific Northwest carryovers included for June 1, 1937-1942 are estimates from incomplete data. Cols. 3, 5, 6, and 8: Calculated. Col. 7: U.S. Mon. Summary Foreign Commerce, converted at 45 lbs. a case. Col. 9: Weighted average prices of all grades and sizes of cans on an unadvertised basis and excluding trade discounts as compiled by H. R. Wellman from canners' reports. Col. 10: Based upon data of the California Pear Growers Association and data secured informally from canners.

1940	3,100	22.6	700	400	300	6.0
1941	3,600	--	--	--	--	8.1
1942	2,600	--	--	--	--	16.1

1/ California produces practically all the nation's dried pears.

2/ Dashes indicate data not available. No export data published since 1940.

3/ Excess of exports over production probably due to carryin.

Sources of data:

Compiled by S. W. Shear, Giannini Foundation.

Col. 1: 1921-1928 based largely upon packers' receipts as reported by the Dried Fruit Association of California. 1929-1941 from California Crop Reports of June. Converted from fresh to dry weight at 5.5 to 1.

Cols. 3-5: Exports of dried pears and one sixth of exports of dried fruit salad, years beginning September 1. 1923-1929 estimates by S. W. Shear based largely on inspections by the Dried Fruit Association of California of dried pears and of dried fruit salad for foreign export. 1930-1940 from U. S. Bureau Foreign and Domestic Commerce, Monthly Summary of Foreign Commerce.

Col. 6: Average of weekly quotations in California Fruit News for seasons through December except 1942 are O.P.A. maximum prices to the government which bought all the pack. Permitted prices to the trade were 0.769 cents higher.

1/ Do not include exports of dried pears in dried fruit compote or salad (see table 12).

2/ Preliminary data for nine months only, July, 1940 - March, 1941, as data by countries of destination not published for later months. Total exports for July, 1940 - June, 1941, were 394 tons.

3/ Germany includes Austria beginning May 6, 1938, and parts of Czechoslovakia and Memel acquired since then.

Sources of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California, from official data of U. S. Bur. For. and Dom. Commerce, as compiled largely by Office of Foreign Agricultural Relations, U. S. Dept. of Agriculture.

1/ Excludes tonnage unharvested. Idaho: 1924, 2,000; 1926, 1,000; 1930, 1,000; 1932, 4,000; 1938, 500; and 1939, 1,200. California: 1931, 7,000; 1932, 10,000; 1933, 7,000; 1939, 7,000; 1940, 5,000; 1941, 5,000; and 1942, 6,000. Also, unharvested production in Oregon and Washington which is reported with the dried prunes is excluded from above table.

2/ California and Michigan are mostly plums and prunes used fresh; Idaho, mostly prunes used fresh; Washington and Oregon, prunes used fresh and for canning.

3/ Preliminary estimates.

Sources of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California.

Cols. 1, 2, and 4: By addition from data in cols. 3 and 5-8.

Cols. 3, 7, and 8: 1919-1936 from U. S. Dept. Agr. Bur. Agr. Econ., Revised Production of Plums and Prunes, 1919-1936 mimeo. July 30, 1937. 1937-1942 from United States and California Crop Reports.

Cols. 5 and 6: From U. S. Dept. Agr. General Crop Report. December 1939, 1940, 1941, and 1942.

1939	213,400	26	54,700	51,500	3,200	3.4	4.4	5.5
1940	177,710	15	27,000	26,200	800	2.8	4.0	5.2
1941	184,900					3.7	6.0	7.5
1942 ^{3/}	178,200					7.0	9.25	11.75

^{1/} Excludes Idaho production of almost zero to 900 tons a year.

^{2/} Prune exports in salad excluded in 1921 and 1922 as data not available.

^{3/} Preliminary estimates.

Sources of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics.

Col. 1: From reports of United States and California Crop Reporting Service.

Cols. 3-5: Exports of dried prunes and 43 per cent of dried fruit salad exports years beginning Sept. 1. Based on U. S. Monthly Summary Foreign Commerce, except salad, 1923-1929, estimated largely on inspection data of Dried Fruit Association of California. Export data not published for years since 1940.

Col. 6: Estimates by S. W. Shear based partly on the California Crop Reports.

Col. 7: 1921-1931 based on packer reports to Giannini Foundation. 1932-1941 based on California Fruit News quotations and monthly prune shipments; 1942 are OPA maximum prices for sales to the government. Maximum prices to the trade were 0.84 cents higher.

Col. 8: Monthly wholesale prices, reported currently in New York Journal of Commerce, weighted by monthly California prune shipments.

| 1940 3/ | 11,683 | 1,929 | 0 | 0 | 8 | 1,921 | 9,754 | 5,901 | 3,853 |

1/ Do not include exports of dried prunes in dried fruit salad or compote. Preliminary data as revised data by countries not published monthly since those for 1930.

2/ Net weight as shipped. Most prunes exported processed, packed in boxes except to Germany which took most of them in bags in natural condition.

3/ Seven months only, September 1940 - March 1941 as data by countries of destination not published for later months. Total exports for September - August were 27,014 tons. No data published since those for 1940.

Sources of data: Compiled by S. W. Shear, Giannini Foundation of Agricultural Economics, University of California, from U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce, Monthly Summary of Foreign Commerce and monthly mimeographed statements and Federal-State Market News Service. Prune Information Bulletins. (Mimeo.) Sacramento.

| 1942 5/ | | 178,200 | 171,000 | 7,200 | | | |

1/ World total excludes Australia and Union of South Africa which averaged 3,000 tons and 800 tons respectively, 1934-1938.

2/ Excludes quantities unharvested in some years. See table 1 for California. Oregon and/or Washington had unharvested tonnages neither dried nor used fresh every year since 1928 except 1936.

3/ Total Europe is French production plus Yugoslavian exports through 1929 and since then also includes exports from Bulgaria and Rumania.

4/ European data not available since 1939, but Bulgarian production in 1940 was 7,700 tons compared with 13,300 tons in 1939, and Yugoslavian production in 1940 was 3,300 tons compared with 80,300 tons in 1939.

5/ Preliminary data for 1942.

Sources of data: Compiled by S. W. Shear, Giannini Foundation.

Cols. 2-4: Estimates of U. S. and California Crop Reporting Service except California data, 1922 and 1923, are trade estimates.

Cols. 5-7: From reports of U. S. Department of Agriculture, Foreign Agr. Service Division, released in Foreign Prune Reports, Federal-State Market News Service, Sacramento.
