Wood's Prolific Bush Bean.

A Great Improvement Over the Ordinary Bush Lima.

Pods Larger, Beans Larger in Size, and
a Wonderfully Prolific Yielder.

We have pleasure in introducing to the trade a grand improvement in this class of delicious vegetables. The Wood's or Henderson Bush Lima Beans of which we were the original growers, introduced many years since, is a desirable bean, but small in size, and our object has been to obtain a robust, prolific variety of larger size and better quality. In this we have succeeded, and offer this valuable acquisition with the confidence that it will undoubtedly prove the most profitable and satisfactory of all the Bush Limas. The foliage of this improved sort is a little larger than the Henderson, and spreads out broader in the row. The stems are stout and hold the pods well up above the ground, and the vines are full of beans, which are nearly double the size of the old variety. It is well known that some of the large kinds of Bush Lima Beans are very shy bearers and are not to be depended upon, but in **Wood's Prolific** will be found a most prolific, reliable cropper, which can be depended upon to make a large yielding and most satisfactory crop. In maturity it is as early as any of the Bush Limas, and it is bound to prove immensely popular with our growers everywhere.

Price, \$8.00 per bushel. Electros as above, \$1.50 each.
