NURSERYMEN, DEALERS AND PLANTERS:

ARE you going to deliver to your
Customers or Plant First-Class Stock?

IF SO, why not buy the best. They do not cost you any more.
I make a specialty of growing Extra-Strong and Well-Rooted Plants.

In 1876,
I ONLY HAD ONE ACRE OF PLANTS,

Remember our Soil is specially
adapted for growing Extra Strong
Plants.

AND NOW

I AM THE LARGEST GROWER IN THE WORLD

REMEMBER

I can sell you a better grade of Plants than any other Nurseryman in the World.
Also, remember my No. 2 Grade is good. There is no culls in it.

TERMS AND PARTICULARS.

My stock of Small Fruit Plants is Largest in the World. My facilities and conveniences for storing, packing and shipping are not equalled by any other firm. My responsibility ceases on delivery of goods at Railroad or Express Office.

My Plants are Warranted True to Name, and of grades represented. Should any stock not prove true to name, I will either refund the purchase money of same or replace the stock true to name free; but am not liable for further damages; and while I am exercising great care to prevent mixtures, the above is to be a condition on which all stock is delivered. All packing will be done neatly and with strict regard to the interest of the customer. Purchasers will please give shipping directions always. In case no such directions are sent with orders, I will use my best judgment in the matter.

Terms Cash.—Bankable notes for 30 or 60 days will be accepted from customers of satisfactory record or bank reference. Fall accounts are due before Dec. 1st, when I draw at sight for any amounts due. Interest charged on all bills over due. All express or freight charges on goods or money must be paid by the customer. If goods are shipped C. O. D. usually one-fourth the amount of bill must be sent with order.

STRAWBERRIES.

GOOSEBERRIES.

EXTRA FINE PLANTS.

NONE BETTER.

Remember you will never have a chance to buy so cheap again. My soil is especially adapted for growing Extra Strong Gooseberries. My stock is extra fine, the strongest I have ever grown.

Read What an Old English Gardener Says About the Pearl:

Smith's Falls, Ont., July 25, 1896.

The PEARL is my favorite. It is a splendid kind, hard to beat, taking it all through. Some of the bushes that had only been planted one year, I picked three quarts from this season. It has not shown any signs of mildew, and such a robust growth I never saw in the Old Country. Some of the new wood is over two feet long and nearly half an inch thick. The White Smith and Downing mildewed badly this season.

THOMAS HAGUE.

F. CRANFIELD, Assistant Horticulturist of the Wisconsin Experiment Station, writes, July 13, 1896:—

In reply to your inquiry regarding the Pearl Gooseberry will say that all other varieties, except the Pearl, in our plantation are affected with mildew. Three plants out of six survived the severe drought of last summer, and are now growing vigorously.

The Rural New Yorker, says:—The Pearl is as productive as anything we have on trial. The berries are larger than the Downing and of excellent quality. Neither the foliage nor berries have shown the slightest trace of mildew.

**CHARACTER AND DESCRIPTION OF THE RATHBUN
BLACKBERRY.**

The Rathbun Blackberry has already become known, and has established a high reputation locally, and the fruit has brought a much higher price than any other blackberry in the market at the time. The plant is a strong, erect grower, and unlike most varieties, produces but few suckers.

As to its hardiness it may be said that it is quite hardy at its home, where it has sustained a temperature of fifteen or eighteen degrees below zero without harm. Plants of the Minnewaski and Erie Blackberries on the same grounds were badly frozen.

The fruit is a jet black color with a high polish, and sufficiently firm to handle and carry well. It has been sent a distance of some thirty-six miles, by wagon and rail, going through in fine condition and selling in preference to the best other varieties in the market and bringing a considerably better price. This fruit has attained quite a local reputation, and every year it is more in demand, and at higher prices than other varieties of blackberries. A large proportion of the berries will measure from an inch and a quarter to one inch and a half in length, and the whole crop is very uniform in size.

Two common, quart strawberry boxes, one each of the Snyder and Rathbun varieties were picked in August, 1896, and placed in the hands of a wholly disinterested party, Mr. Lawson York, ex-postmaster of Smith's Mills, N. Y., with a request to count and report the exact number of berries in each basket. When he had done so, it was found that the basket of Snyder contained 164 berries, while that of the Rathbun was filled with 45 berries. One of these berries of the Rathbun was, at the same time, measured before witnesses and found to be one and three-fourths inches in length and one and three-eighths in diameter.

L. H. BAILEY, Professor of Horticulture.

ITHACA, N. Y., JULY 21, 1896.

The Rathbun Blackberry is now in full fruit and we are very much pleased with it. It is midway between a blackberry and a dewberry in habit as also in earliness. The berries are exceedingly large, glossy, jet black, and of good quality. I certainly think that there is a future for it.

L. H. BAILEY.

From S. H. YORK, Town Clerk, of Harmony, N. Y.

HARMONY, N. Y., SEPTEMBER 2, 1894.

I have seen and tested the new Rathbun Blackberry and do not hesitate to say that it is the largest and best flavored of any blackberry I ever saw.

S. H. YORK.

POMONA CURRANT.

All Former Records Broken.

No Competitor.

(Reduced in Size.)

In one year 1894, the crop of fruit from $6\frac{1}{2}$ acres of **POMONA CURRANTS** was sold at wholesale for over \$4,676.00, or over \$627.00 per acre.

In **three consecutive years** (1892, 1893 and 1894), the fruit from this same $6\frac{1}{2}$ acres of **POMONA CURRANTS** was sold at wholesale for \$9,000.00, making over \$1,384.00, or over \$461.00 per acre per year.

In 1892 the fruit from this $6\frac{1}{2}$ acres of **POMONA CURRANTS** was sold for over \$3,400.00, yet of the 83 rows making the $6\frac{1}{2}$ acres, 19 rows were planted in 1887, 41 rows in 1889, and 23 rows in 1890, making the average time these had been planted less than $3\frac{1}{2}$ years, and the 60 rows first planted had borne a heavy crop in 1891.

Eighteen years with but **one** failure, and that in 1895. A heavy crop again in 1896. Plants 18 years old produced this year more than two gallons each, and in 1894 these same plants produced 12 quarts each.

Remember:—The above **unparalleled record** is actual acreage yield (not estimated product of a few petted plants) and was secured by only good ordinary field culture.

On this same $6\frac{1}{2}$ acres is growing a fine Keiffer Pear Orchard, of 170 trees to the acre planted with the currants, and almost every tree a model of perfection and ready for bearing.

Every item in the above statement is open for investigation and will be verified to the satisfaction of the most skeptical.

Remembering that it only takes **two to three years** from planting till you can begin harvesting these crops, and that the plants **continue** in profitable bearing for 20 years if fed and cared for, and paying better than anything else for this feed and care.

A FEW TESTIMONIALS FROM SHIPMENTS.

I received the plants you sent me this noon in perfect condition. They are certainly the strongest plants I ever received from any Eastern firm and such fibrous roots, it did me good to look at them. If they do not make a fine growth it surely will not be your fault.

IRA. W. ADAMS, California.

Your plants at hand. I have been buying all kinds of Plants for the last fifteen years. I must say that yours were better than the best I have ever bought in fifteen years. I will order from you in the spring, as I think it would be too late now for fall planting.

J. TAVEMER, Iowa.

The 21,500 Gooseberry and Currants bought of you this spring are all doing finely; not over 200 lost in the entire lot.

E. S. HOLMES, N. J.

[P. S.—Mr. E. Holmes, bought all 2 years No. 2 grade of Gooseberries, and 2 years No. 3 grade of Currants. This goes to show what kind of stock my No. 2 grade and No. 3 grade is.]

The 3,100 Gregg and Palmer's Raspberry Plants you sent me this spring were the best plants I think I ever saw. I have sold a great many plants during the past twelve years. If you furnish plants like those mentioned above I will order what plants I need from you hereafter.

Your 300 Kansas plants received, they were very fine. Would rather have 300 such plants than a 1,000 poor ones. Thanks for your prompt shipment; also for those fine plants.

A. ABBOTT, Conn.

PEARL GOOSEBERRY.

(The Most Prolific Gooseberry Known.)

This Cut was taken from a branch only three years old. On one bush we estimated that there must have been 2,500 berries, it averages eight berries per inch of wood. See Testimonials, page 8.
