THOS. MEHERIN'S
CATALOGUE

— OF —

SEED, FRUIT TREES, SHADE TREES,
PLANTS, ETC.

THOS. MEHERIN,

AGENT FOR THE

CALIFORNIA NURSERY COMPANY

516 Battery Street,

P. O. BOX 2059.

SAN FRANCISCO, CAL.

Dec 1877

REMARKS.

I take great pleasure in presenting for the kind consideration of my friends and the public generally my Catalogue for coming season, and take this opportunity to thank my customers for past favors, and state that I earnestly solicit a continuance of the same. To those who dealt with me in past years, I would say that my aim shall be, as in the past, to furnish a first-class article at a reasonable price, and to so handle their orders as to merit a continuance of their patronage. How far I have succeeded, my customers must decide. From those who have had no dealings with me, I would solicit a trial, and I am confident of my ability to please.

I have made my prices as low as possible, considering that the goods I offer are all strictly first-class.

In another portion of this catalogue, I say that *I test* all seeds before sending them out. So that no person reading this will be under the impression that I warrant my seeds, I would here say, in accordance with established custom in the seed trade, that, while I am satisfied that my seeds are as good and as pure as any to be found, it must be distinctly understood that I sell no seeds with any warranty, either expressed or implied, nor will I be in any way responsible for the crop. If the purchaser does not accept the seeds on these conditions, they must be returned at once. Various conditions of soil and climate, operating unfavorably to the germination of seeds, make it impossible for the seedsman to assume any responsibility for either the growth or productiveness of the seed he sells.

The foregoing remarks regarding warranty apply in effect to everything in this catalogue, except fruit trees, etc., etc., under which head will be found special mention of the conditions of warranty under which they are sold.

THOS. MEHERIN,

P. O. Box 2059.

516 Battery street, San Francisco, Cal.

TO CORRESPONDENTS.

Correspondents will greatly oblige us by observing as far as possible the following points in making out their orders:

1st. All orders should be sent in as early as possible, as it will be my rule to execute them in the order in which they are received.

2nd. All orders should be legibly written out on a separate sheet, and not mixed up in the body of the letter, thereby saving us a great deal of trouble, and tending to prevent mistakes.

3rd. When particular varieties are ordered, it should be stated whether, and to what extent, substitution will be allowed, in case the order cannot be filled to the letter, as happens occasionally in all establishments. When no instructions in this respect accompany the order, I shall feel at liberty to substitute other varieties as nearly similar as possible. If the selection of varieties is left entirely to me, I shall endeavor to send only such sorts as are acknowledged to give general satisfaction.

4th. All trees and plants are carefully labeled and securely packed in the best manner, for which a moderate charge, sufficient to cover the cost of material only, will be made.

5th. It is requested that explicit directions for marking and shipping packages accompany each order. When it is left to me to choose the mode of conveyance, I will use my best judgment; but, as all articles are at the risk of the purchaser after being shipped, I must not be held responsible for any loss or delay that may occur through the negligence of the forwarders.

6th. As I guarantee the freight on all shipments leaving my establishment, it will be necessary for unknown parties to remit the money with their orders. Orders to be sent by express C. O. D. must be accompanied by at least one-third of the amount in cash; otherwise they will receive no attention.

7th. My customers are requested to notify me immediately of any errors that may be committed in filling their orders, so that I may at once rectify the same, as I desire to conduct my business in all respects satisfactory to those who favor me with their confidence.

8th. All orders from unknown correspondents must be accompanied by the cash or satisfactory reference.

9th. Remittances may be made by draft, Post-office order, or Wells, Fargo & Co.'s money order on San Francisco, or cash by express, prepaid.

10th. Small packages, not exceeding four pounds in weight, may be sent by mail at an additional charge of one-half cent per ounce.

All communications must be addressed to

THOS. MEHERIN,

516 Battery Street, San Francisco, Cal.

P. O. Box 2059.

Agent for California Nursery Company.

Vegetable Seed Department.

My stock of seeds, which is this year more complete than ever, has been selected with the greatest care from the best houses in the United States and Europe, and I feel confident that they will give satisfaction wherever planted. My customers can always rely on getting *fresh seeds*, as I make it a rule to send out no seeds until they have been thoroughly tested as to germinating qualities. Having a large greenhouse connected with my store, my facilities for testing seeds are superior to those of any other seed-store in the city. In making my prices on seeds herein listed, I have endeavored to make them as low as possible considering the quality of the goods; in short, my prices are as low as good fresh seed can be offered for.

I have omitted from my list many varieties having no particular merits, or which upon trial have proved so little different from other kinds as to be for all practical purposes the same.

Parties desiring seeds, or anything contained in this list, in large quantities, will do well to write for special prices.

I deliver, postage or express charges paid, to any part of the United States, any Vegetable or Flower Seed, in packets or ounces, when ordered at our catalogue rates, except Peas, Beans, Corn, Clover, Grass, Bird, or other bulky seeds, which will be mailed when 8 cents per pound are remitted to cover postage.

For quantity of seed required to plant an acre of ground, see table at end of catalogue.

While I use the greatest care to have all seeds pure and reliable, we do not warrant them in any respect whatever.

Flower Seed Department.

General Directions for the Cultivation and Treatment of Flowers.

The success or failure of flower seeds depends greatly upon the selection of a proper soil in which to sow them. The soil best suited for the successful growing of flowers is a fine, rich, sandy loam.

Flower seeds should be sown in shallow, well-drained boxes or pots, placed in a warm window, a hot-bed, or, if possible, a green-house. A common mistake made in sowing flower seeds is in planting them too deep. As a general rule, cover only to the depth of the thickness of the seeds. With Balsams, Zinnias, Morning Glory, Sweet Peas, Nasturtium and the like seeds, half an inch is not too much. Pansies, Pinks, Daisy, and other seeds of like size, should be but lightly covered. Fine flower seeds, such as Calceolaria, Lobelia, Geranium, Petunia, Primulus, Begonia, Cineraria, Portulaca, and other seed of like size, should be sown in shallow boxes well drained, pots or earthen pans, in a soil composed of leaf mold, or good loam and fine sand, well mixed. They should be merely pressed into the soil with a piece of board, and covered lightly with fine sand. Always press the earth down firmly after sowing all flower seeds, and water frequently with a very fine sprinkler. Success is more certain if a pane of glass be placed over the pan or box till the plants have appeared, when it should be removed. The box or pan should have plenty of light, but shade it with paper or cloth from the hot sun until the young plants are well started. When the seeds are up they must be given plenty of air and moisture; not too much water, or they will damp off. When the plants are well out of the seed leaf, they must be transplanted to new boxes or small pots until they are ready to set in the open ground. To transplant them, do not pull them out of the seed pan or box, but break up the soil by running a stick or the trowel under it, when the plants can be taken out with good roots. After transplanting, the plants should be well watered, and kept shaded for a few days, until they are well rooted in the new soil. Many fine seeds are killed by too much water. While growing they should be watered lightly, carefully and frequently with a very fine sprinkler, but not in such large quantities as to saturate the soil. Plants in pots should be repotted into larger pots as often as the pots are fairly filled with roots, if fine flowers are desired.

Explanation of Signs Used in Flower Seed Catalogue.

Annuals grow, bloom and die the first year from seed.

Biennials bloom the second year from seed, and then die; though many, if sown early in the spring, will flower the first year.

Perennials usually bloom the second year from seed, and continue to grow and bloom for many years. Some will also bloom the first year, if sown early.

2 designates the Annuals.

3 designates the Biennials.

4 designates the Perennials.

5 designates the Climbers.

6 designates the Green-house plants.

7 designates the Evergreen plants.

* designates the Ornamental-leaved plants.

Colors—The color of the flower is given opposite each variety.

Climbers—The height to which they grow is given in feet opposite each variety.

Fruit Tree Department.

The Fruit Trees which we offer have all been grown at the Nursery of the California Nursery Company, in Alameda county, on new ground, in a locality entirely isolated from old orchards or nurseries, and are positively *free from all insect pests*. This nursery is the largest and the best regulated on the Pacific Coast, embracing 500 acres of the finest land in Alameda county. We are interested in it, and have been appointed agents in San Francisco. We are now able to fill all orders, large or small, with first-class, clean trees, at very low rates. Samples of these trees can be seen at our yard in San Francisco at any time during the season. Parties desiring fruit trees in large quantities will do well to write for special rates.

Warranty.

While we exercise the greatest care and diligence to have all our trees, etc., true to the label, and hold ourselves in readiness, on proper proof, to replace all such trees, etc., that may prove untrue to label, free of charge, or to refund the amount paid, it is mutually understood and agreed to, between purchasers and ourselves, that our guarantee of genuineness shall in no case make us *liable* for any sum greater than that originally paid us for said trees.

Hints on Transplanting.

The many excellent treatises on Fruit Culture which have appeared within the last few years—one or more of which should be in the hands of every person intending to plant—render it almost unnecessary to give any directions in that line; yet we are so frequently asked for advice in this way, that we have concluded to offer a few general remarks.

The situation of the orchard having been decided on, the ground should be deeply plowed, subsoiled, and thoroughly pulverized. The holes should be dug at least a foot larger in every direction than actually required by the roots, when spread out in their natural position. The roots should be carefully examined, and mutilated and bruised portions cut off. In planting, the top soil should be broken down into the hole, and worked carefully in between every root and fibre, filling up every crevice, that every root may be in contact with soil, and the whole made quite firm as the filling-up progresses. The tree when planted may, in light soils, stand from two to three inches deeper than it stood in the nursery; but in heavy clay or wet ground it is advisable to have it stand at the same height as it was before transplanting.

On account of our long, hot, dry summers, we have found it beneficial to shade the sunny side of the tree with a board or stake stuck in the ground a few inches away from it, for the first two or three years. The tops should be shortened in more or less, in proportion to size and variety of tree and condition of roots.

A work on "Horticulture in California," by Mr. E. J. Wickson, editor of the "Pacific Rural Press," which I have for sale, will be found very useful in this regard, written as it is for this coast; and by an author of wide experience here.

For distance of planting fruit trees, and number of trees required for an acre at a given distance apart, see last page.

All our Fruit Trees are grown on whole seedling roots. The advantages of these in promoting the health and thriftiness of trees over others grafted on pieces or sections of roots, or budded on stocks grown from cuttings is acknowledged by the best authorities, and is easily apparent to the most casual observer. Leading Eastern nurseries have adopted this course altogether.

Prices quoted herein are for qualities and sizes specified. *For extra sizes, varieties or quantities other than mentioned, special prices will be made.* Estimates cheerfully furnished on all lists. Write us.

New Varieties.

Lately introduced and offered for the first time; trees
3 to 5 ft. high, each \$1.50.

Olive—*Calamignara*. A variety from Sicily, of large
size and highly esteemed as an oil Olive.

" *Da Olio*. Fruit very large, oblong; makes
excellent pickles, and is also valuable for
oil. Imported from Sicily.

" *Giarrappa*. Tree a very strong and erect grower.
This is also a Sicilian variety, producing
heavy crops, which are used for oil.

" *Picholine d'Ax*. A French variety. Tree a
very strong grower, fruit large, oblong,
pointed. In France it is one of the most
highly esteemed varieties for making pick-
les in the green state; also valuable for oil.

" *Oliviere*. A very hardy variety from France;
fruit of medium size, conical; with a large
point; makes a good quality of oil.

" *Pigale*. Another French variety; tree a very
strong and erect grower; fruit of medium
size, roundish oval; valuable both for
pickles and oil.

" *Rouget*. Tree very hardy and a good grower;
fruit of medium size, roundish oval. This
olive is used in France for oil and pickles.

" *Ronde de Languedoc*. Fruit very large, nearly
round; an excellent variety for pickles; ex-
tensively cultivated in Languedoc, France.

EVERGREEN TREES AND SHRUBS.

Nearly all the plants mentioned under this heading have been once or more transplanted, thereby greatly adding to the certainty of their growing. In order, also, to reduce the amount of soil and consequent freight charges, we have grown those varieties most in demand in pots. In shipping to distant points this is especially desirable.

ROSES.

Having determined to keep fully up with the times in the propagation of this beautiful flower, we have greatly enlarged our facilities to supply the ever-increasing demand, and can now offer a collection such as cannot be found elsewhere on the Coast, and in but few other establishments on the continent. The plants offered are strong and vigorous, have been grown entirely in the open ground, and consequently will not require the careful nursing necessary to those propagated under glass in three months' time, and sold at low rates. They cannot fail to give satisfaction the first summer after planting. From November to March they can be shipped in a dormant state, packed in moss. Varieties marked with a (*) can be had budded in tree form (usually called *standards*) on a single stem three to four feet high. In conclusion, we would advise our customers to have their orders forwarded by express or freight, whenever possible, as we can then send much better and larger plants than if sent by mail.

New and Choice Varieties.

Price, 40 cents each ; the eleven varieties, one of each, \$3.75.

American Belle (Hybrid Perpetual). A sport from American Beauty, of a pleasing shade of pink ; very distinct.

- Beaute Inconstante** (Tea). Bright Capucine red, shaded and lined carmine and bright yellow; a novel and distinct color.
- Belle Siebrecht** (Hybrid Tea). A truly superb rose, a cross between La France and Lady Mary Fitzwilliam. Color, a solid pink of the richest shade (a rare color); flowers sweetly perfumed, and large, beautifully formed and of long, tapering shape; a free bloomer and vigorous grower.
- Dundee Rambler** (Ayershire). Vigorous climber, with small white flowers tinged rose as they open fully.
- Improved Rainbow** (Tea). Entirely distinct in its markings. The improved Rainbow, instead of being broadly marked like its parent, the Rainbow, is penciled with brightest Gontier color, every petal in every flower, and base of petals are of bright amber color, making a very distinct and charming flower.
- Madeline Guillaumauz** (Tea). White, shaded silvery salmon.
- Mrs. Pierrepont Morgan** (Tea). A sport from Mme. Cusin, in every way much superior to that variety. The flowers are much larger and very double, petals are broad and massive; prolific bloomer; color intensely bright cerise or rose pink. Considered one of the finest and most beautiful in form, color and substance ever introduced.
- Oakmont** (Hybrid Perpetual). Deep, bright rose color in the way of Paul Neyron, but blooms very much more freely. Very sweet scented.
- Red Microphylla** (China Creeping). Small, glossy green foliage, nearly evergreen in habit, hardy and vigorous grower. Flowers red, semi-double, produced in great profusion; very pretty and sweet.
- Williams Evergreen** (Climbing Evergreen). White, centre rosy flesh.
- Wichuraina** (Japanese Creeping Rose). A low, trailing species, its stems creeping on the earth as closely as the Ivy. The flowers are produced in the greatest profusion, in clusters, on the end of every branch. They are pure white and are very fragrant.

Roses—General Collection.

Price, each 25 cents; per 10, \$2.00; per 100, \$18.00. Standards, \$1 each; per 10, \$7.50.

Tea or Everblooming.

Climbing Roses.

These will be found described in the various preceding classes to which they belong. We collect them under this heading for the convenience of our patrons. They are very useful, and highly valued for training over arbors, trellises, and verandas; and as screens for unsightly objects, such as fences, walls, etc., they cannot be surpassed.

- Dundee Rambler (Ayershire).
