A SELECTED BIBLIOGRAPHY

OF

WILDLIFE BIOLOGY

By

Lawrence V. Compton
Assistant Regional Biologist

Regional Bulletin No. 58
Wildlife Management Series No. 3
September 15, 1939

INTRODUCTION

Members of various technical Divisions, including the Division of Biology, have frequently requested a list of wildlife literature. It was partly because of such requests that this bibliography was prepared, but another incentive came from the increased activity and interest in the improvement of personnel and program. It is hoped that this bibliography will aid in this improvement. The objective in preparing the list was to present references to the more or less basic literature of wildlife biology, to the literature pertinent to Region 8, to the standard manuals for identification of plants and animals, and to texts which treat of some of the fields that are closely related to wildlife biology. As indicated by the title, this is a selected bibliography and in no sense does it exhaust the literature on any subject.

The first part of the bibliography is in the standard alphabetic form, the second part is a subject matter index. The citations preceded by an asterisk are available in the regional library; the others may be borrowed through the inter-library facilities of the regional library.

It is expected that additions to the list will be made and it is hoped that each person using it will offer suggestions as to material which he feels should be added.

CHAPTER I

THE first object of this work is to show that the

principles of geometry are not self-evident

but are founded on a set of axioms

which are themselves not self-evident

but are founded on a set of axioms

which are themselves not self-evident

but are founded on a set of axioms

which are themselves not self-evident

but are founded on a set of axioms

which are themselves not self-evident

but are founded on a set of axioms
