SUGAR MAPLES

One of the very finest deciduous-leaved trees of North America is the tall Sugar Maple. It can truly be called the noblest of all the Maples.

NO BETTER VARIETY CAN BE USED FOR STREET, PARK, OR LAWN PLANTING, as its growth is rapid and straight, its form symmetrical, and it does not have the objectionable density of foliage possessed by the Norway Maple.

For this reason it is well adapted for planting near buildings, as it does not obstruct light or air, and the grass will grow up to its very trunk. It is deep-rooted, and the wood is not brittle; hence, it is not easily damaged by storms. The Sugar Maple will thrive in almost all localities, except where the ground is damp or boggy. No tree has more gorgeous autumn coloring, as it varies in all shades of yellow, orange and scarlet until the leaves finally fall.

ANDORRA NURSERY OFFICE, WISSAHICKON DRIVE.

Andorra Nurseries

CHESTNUT HILL, PHILADELPHIA, PA.

OUR NURSERIES are extensive, covering five hundred acres, of which over two hundred are under cultivation. They are easy of access, as Chestnut Hill is the terminus of branches of the Pennsylvania and the Philadelphia and Reading Railroads, and the Chestnut Hill (City Line) trolley runs from the stations to within three minutes' walk of the Nurseries.

QUALITY.—The trees and shrubs offered are grown in open, unsheltered ground, in a very exposed situation, which insures their hardiness, and on soil admirably adapted for forming robust plants having an abundance of roots. **Special attention** is called to the fact that our stock is grown a good distance apart in the rows, insuring heavier trees and shrubs than are generally offered.

QUANTITY.—Lots of 5 and 25 will be furnished at the 10 and 100 rates respectively.

STOCK SELECTED by customers at the Nurseries will be charged for at advanced rates, according to the value of the trees chosen.

SHIPPING SEASON opens about March 1 in the spring and September 1 in the fall.

INSECT AND FUNGOUS PESTS.—A certificate of inspection will be sent with each shipment.

PACKING.—The utmost care will be used and charges made at actual cost.

ORDERS.—Write plainly and give explicit directions as to address and mode of shipment; otherwise we will forward according to our best judgment. All goods travel at purchaser's risk. We assume no responsibility for the goods after delivery to the forwarding companies.

CLAIMS, to receive consideration, must be made within five days after receipt of goods.

TERMS, CASH WITH ORDER, except to such persons as satisfy us as to their responsibility.

16 to 18 ft.; trans.	3 50	30 00
18 to 20 ft.; trans.	5 00	

SPECIAL ATTENTION is called to the Superb Dwarf Maple, *Acer Tataricum ginnala*, the most showy of all the autumn Maples, with its deeply incised foliage of the most brilliant scarlet. It is much earlier to turn in color than any other Maple; extra fine for massing. (See page 7.)

We can furnish a number of fine, large, specimen Deciduous Trees. Write for prices, or visit our Nurseries and examine the stock.

DECIDUOUS SHRUBS.

PACHYSANDRA terminalis	25	2 50
PÆONIES, Herbaceous. In the long list of hardy herbaceous plants which are gaining in favor every year with all the plant-loving world, none stand higher than the Herbaceous Pæonies. They are very hardy and easily grown in any good garden soil, requiring to be heavily manured every fall. The stately beauty of their bloom in such an infinite variety of coloring makes them indispensable for every garden. Many of them have the delicate fragrance of the rose, and, seen in masses against a background of dark foliage, produce a magnificent effect. Our collection is very large, and comprises about 75 varieties in double and single flowers.

PHLOX DECUSSATA. This glorious family of hardy perennials is, perhaps, the most widely known and popular of all the various plants which we have in our gardens, and each year finds the newer and showier varieties increasing through the hybridizer's skill. Certainly no perennial is more worthy of culture, more satisfactory in every situation, or more effective, either as individual plants or grouped in masses in shrubbery beds. All the Phloxes, with the exception of the dwarf form, are well adapted for cutting, and are excessively floriferous.		
Heavy, field-grown mixed sorts	25	1 50

NAMED VARIETIES—

- Caran de Ache.** Rosy carmine, tinged with rose; fine truss.
Czarina. Pure white; pyramidal spikes.
Eclairer. Flowers immense; carmine-salmon, center rosy white star.
Henri Murger. Large, pure white; large carmine center; very fine.
Independence. Pure white; large flowers; earlier than Czarina.
Iris. Dark purple-violet.
Jeanne d'Arc. Snow-white; grand form and substance.
Lothair. Cerise-salmon; crimson eye.
Le Fue de Monde. Flame color; late.
Madame Meuret. Flame color; early.
Norwood. Large flowers and spike; bright magenta-crimson.
Ornament. Bright clear rose; very large, pyramidal panicles.
Pantheon. Very large flowers; rose, light center.
Sylphide. Panicles of very large pure white flowers.

Plants from pots, our selection, 15 cts. each, \$1.50 per doz., \$10 per 100.

PHLOX DECUSSATA, BEST NEW VARIETIES—

- Albatre** (Dwarf). White, dense panicles.
Argon (Dwarf). Very large panicles of large flowers; delicate rose, shaded salmon.
Amphitryon. Long, pyramidal panicles; flowers lilac and white in rays from center.
Astier Rehu. Large flowers, undulated petals; violet-purple, large white center.
Brantome. Well formed flowers; red, violet center.
Candeur (Dwarf). Pure white; extra dwarf.
Coccinea. Rich glowing crimson.
Derviche. Dark lilac, purplish violet center; flowers very large, of perfect form.
Fantome. Perfectly formed flowers, very large; well defined pure white, surrounded by clear violet.
Gen. Chauzy. Very bright dark salmon.
Girondin. Very large, perfectly formed flowers; dark carmine-rose, shading blush to center.

PRICE LIST FOR 1900

Jungfrau (Dwarf). Rose and white.
James Galloway. Cherry red.
La Vague. Silvery rose; large flowers; fine.

JAPANESE ANEMONES

These charming Japanese Anemones are deservedly great favorites with all who love and own a garden ; not only for their great and lasting beauty, but also on account of their being at their best during the late summer and autumn months, a time when such flowers are much needed to brighten up our flower beds and shrubbery borders. The blooms will last fully a week in water, if cut when freshly opened. They are perfectly hardy, and need no skilful cultivation, but they do best when planted in a deep, rich soil, flowering freely, whether the season be a wet or a dry one. When grown in groups these plants can be best seen and most fully appreciated.

They flourish in almost any location, whether naturalized in the long grass, on a sunny, bushy bank, or among the shrubbery. They grow strongly and will largely care for themselves, yet we have no late flowers more beautiful. The large, dark, rough leaves of a good clump of Anemones form a beautiful setting for the great cream-white flowers. We cannot too much emphasize their beauty and utility for really tasteful and enjoyable gardens, where they should be scattered plentifully. For prices, see page 22.

RHODODENDRONS.

The glory of every place possessing Rhododendrons is their superb bloom in the latter part of May and early June. The magnificent coloring and huge clusters of flowers in so many shades of pink, violet, rose, purple, and delicate creamy white, give them first place among evergreen shrubs.

The principal feature of every fine place in England is the collection of these plants, and surely we Americans ought to appreciate and prize them even more, when our mountain ravines and brook-sides are transformed into fairyland every summer by the bloom of our native Rhododendrons, growing and flowering in such masses as would be priceless if like effects could be produced on private grounds. Even their foliage is beautiful and most effective in the dull winter months,

when their glossy green leaves add a beauty to the otherwise bare shrubbery.

The great decorative value of Rhododendrons is now fully recognized, and every year increases their popularity. This has been much hindered by the fact that so many of the most strikingly brilliant colors were not hardy in our climate, the heat and dryness of summer and extreme cold of winter usually proving fatal to them. But during the last five years we have expended much time and money in selecting a few varieties that will combine hardiness and the brilliancy of coloring, and the results have been so satisfactory that now we are enabled to have several exquisite colors in our collection which a short time ago would have been impossible in this climate. We consider our plants fully acclimated now, as they have stood the severe test of four winters in our Nurseries. Of these hardy varieties the finest are the Catawbiense Hybrids, and from these our stock is specially selected.

Cultural Directions.—In the choice of location for a bed of Rhododendrons, care should be used to select a place sheltered from the force of the prevailing winds. The earth should be dug out of the bed to the depth of $2\frac{1}{4}$ feet, being careful to lay aside the top soil and remove all clay. Procure, if possible, good surface soil from some old pasture, add this to the soil laid aside, mixing thoroughly, and with this fill in the excavation. After the planting is done, cover the surface of the ground with well-rotted cow manure to the depth of two or three inches. This not only enriches the soil, but aids very much in keeping the earth damp during hot weather. This mulching should be dug into the bed every spring, and renewed every season about the middle of July. The first year Rhododendrons are planted they should be liberally watered in the event of a dry spell of weather. It is best always to plant in the spring, and in the autumn a covering of leaves 10 to 12 inches deep is a good protection and very beneficial, this covering being kept in place by a shelter of boards placed around the edge of the bed or shrubbery border. One of the best protections is made of evergreen branches which have been sharpened at the ends and stuck in the ground to form a temporary hedge for the winter; these should be considerably higher than the tops of the plants they shelter. While Rhododendrons are most effectively planted in masses, they should not be allowed to crowd each other, as each one, if given space, will form a shapely plant; so if the bed becomes crowded, it is best to transplant some of them, as they lift very easily and with perfect safety, even when very large.

We take great pleasure in inviting all admirers of Rhododendrons to visit our Nurseries during the latter part of May and the very early days of June, and we feel sure it will afford great pleasure to every one who sees our fine collection of over five thousand plants in the beauty of full bloom. For prices, see page 6.

HARDY HERBACEOUS PLANT DEPARTMENT, ANDORRA NURSERIES.

SMALL EVERGREENS IN NURSERY ROWS AND PACKING HOUSES IN BACKGROUND.

*Special attention is called
to the following, on page 6*

LEUCOTHOE CATESBÆI. One of the best shade-supporting plants, and very useful for massing as undergrowth. It is a hardy Evergreen Shrub, with stems of dark green and leaves of bronze, coloring beautifully during the fall and winter seasons, and in the spring it bears a sweet-scented white flower, very early.

KALMIA LATIFOLIA (Mountain Laurel). Early visitors to our mountain resorts will remember with the greatest pleasure the beautiful Mountain Laurel seen in profusion during June, the dainty rose-pink buds and creamy white flowers dashed with pink, contrasting so distinctly with the dark, glossy color of its evergreen foliage. This plant ranks in beauty with the Rhododendron, but is seldom seen in private grounds, as it is difficult to transplant from the woods, and only thrives well when nursery-grown. When seen in its native beauty, it is always found in masses; hence the best effects are produced by planting it in quantities, either alone or with Rhododendrons, which latter produces a fine effect.

ILEX OPACA (American Holly). This is one of America's most beautiful evergreens. Its foliage varies very little from that of the English Holly, and its rich clusters of scarlet berries make a good substitute for flowers in the winter shrubbery. It is hardy in almost any locality, and to insure safety in transplanting the leaves should be removed from the plant at that time.

ANDORRA NURSERIES
CHESTNUT HILL, PHILADELPHIA

*To Secure and Maintain Beautiful Lawns
and Productive Pastures, use*

ANDORRA BRAND Canada Unleached Hard-wood Ashes

They are nature's complete fertilizer
They are healthy for man and beast
They make new soil out of worn-out lands
They do not make the lawn unsightly
They produce no unhealthy or offensive odors
They are easier to handle than other fertilizers
They keep borers away from trees

Realizing the importance of a clean, complete manure that can be applied to the lawn and garden, and having all the advantages without the offensiveness and inconvenience attending the application of stable manure, we have made arrangements with responsible dealers in Canada for a limited supply of their best grades of screened, Unleached Hard-wood Ashes, and are now in a position to supply them to our customers either in small quantities or by the carload of 15 to 20 tons.

For convenience in handling and to prevent waste, we have arranged to have all our Ashes put up in barrels of about two hundred pounds each.

Apply at the rate of 1,000 to 1,500 pounds per acre.

Price per barrel of about 200 pounds, \$2.50; per ton, \$20, delivered by wagon; \$18 per ton, F. O. B. cars, Chestnut Hill. Special rates for large quantities and car-load lots.
