CATALOGUE 1903-4

Jurupa Nursery Co.

RONSE & BOLLINGER, Props.

Riverside, - California

Experimental Station

We are interested in the development of the new country of Southeastern California, and are establishing an experimental farm at Silsbee, near Imperial, California, where we shall test the value of every variety of fruit grown in California. We shall pay special attention to the culture of Grapes, Figs and Dates which fruits we believe to be best adapted to this climate.

To Our Patrons

In presenting our Catalogue and Price List for the season of 1903-1904 we desire to express our sincere thanks our friends and customers for their patronage in the past and take pleasure in assuring them that we shall be better able to serve them this season than ever before.

We have purchased the Hall Nurseries one of the most reliable and favorably known businesses of its kind in California and have in other ways extended our facilities until we are in a position to fully meet the demands of the trade.

We therefore solicit and confidently expect a continuance of the patronage of our old customers and of any others who may be in need of anything in our line.

We make a specialty of furnishing to the eastern trade many of the novel and interesting plants characteristic of this unique State.

JURUPA NURSERY CO.

Riverside, California.

To Correspondents

Correspondents will please observe as far as possible the following regulations:

1. The names of varieties should be plainly written in order to prevent mistakes.
2. It is always advisable to send in orders as early as possible, as they are usually filled in the order in which they are received.
3. Applying prices. Not less than 6 of a sort will be sold at the dozen rate, nor 40 at the 100 rate, nor 400 at the 1,000 rate.
4. In ordering, please state whether substitution will be permitted, as we feel at liberty, when no instructions accompanying the order, to replace with other sorts as nearly similar as possible.
5. Persons not acquainted with the different varieties would do well to leave the selection to ourselves, as we shall send only such as give general satisfaction.
6. State distinctly how you wish us to ship—by freight or express, also designate the route; otherwise we will use our own discretion in forwarding; but in all cases the articles are at the risk of the purchaser after being shipped.
7. When contracts are made to deliver trees to any particular place, our responsibility ceases the day on which the purchaser was notified to receive his orders.
8. Orders from unknown correspondents must be accompanied by a remittance or satisfactory references. Remittances may be made by draft or postal order, or express money order on Riverside, Cal.
9. Customers are requested to at once notify us if errors occur in filling order, as we always endeavor to

make amends satisfactory to those placing confidence in us.

10. When larger quantities of goods of any class or variety are wanted than are priced in Catalogue, please send list of varieties and number of each desired, for special quotations. We invite comparison of prices and stock with any and all reliable, first-class nurseries. Ours are living prices on good reliable stock. Unreliable, poorly-grown stock is dear as a gift.

By your recommendation of our stock to friends, you will do both us and your friends a favor, and we will be glad to send valuable plants as presents for your trouble.

We make no charge for proper packing, and deliver goods to the various transportation companies free. We cannot afford to fill orders of less amount than \$1 when sent by express or freight.

Address all communications to

JURUPA NURSERY COMPANY,

Riverside, California.

Guarantee

Our trees are all budded or grafted from bearing trees. Our nursery stock is handled by experienced and careful men under our own supervision, still, with all our caution, mistakes of minor importance might occur.

We guarantee our nursery stock as far as any reliable nursery firm can do so, and while we are not willing to be held liable for a greater sum than the first cost of the trees, we do agree upon proof being made, to refund to the purchaser of any trees that may not prove true to label, the amount of money paid to us for such trees, or to replace them with others free of charge. We solicit your patronage, but in justice to ourselves cannot accept your orders on any other terms.

Catalogue for 1903=1904

BERRIES

MAMMOTH BLACKBERRY

This Blackberry was originated at Santa Cruz, California, a few years ago by Judge Logan, the originator of the now famous Loganberry. It is said to be a cross between the wild blackberry of California and the Crandall which was brought to California years ago by Mr. Crandall of Placer Co., California.

The fruit of the Mammoth Blackberry is enormously large, some measuring from $2\frac{1}{8}$ to $2\frac{1}{2}$ inches long. Seed very small and not very abundant, the globules are large and the core quite small and soft. The flavor is very mild and pleasant and when fully ripe is very sweet. The Mammoth ripens from two to four weeks earlier than any of the other varieties. We picked Mammoth berries this season on May 15th, when the common blackberries were just in bloom.

It will stand the dry, hot summers of Southern California and does well in moist climates.

The Mammoth Blackberry does not sprout from the roots and therefore it is necessary to grow them from tips or stolons. We advise to give the Mammoth lots of room for they are strong growers. In California it is an evergreen, bearing very nearly the year round in localities partially exempt from frost.

Every fruit grower should have at least one row of Mammoths.

LOGANBERRY

A cross between the Red Raspberry and the Blackberry. This berry was originated at Santa Cruz, California, in 1882, by Judge Logan. It has become the leading berry of California, fruits one year after planting, is a good grower and bears enormously, berries are large and of red color. Brings fancy prices. Ripens in Southern California from May 15 to 20. Does best on loam soil although we have seen extra heavy crops on very sandy soil. It propagates from tips. The Loganberry, if planted in northern climates, must be protected from frost in the winter months. A good berry for the southern states and south Arizona.

PHENOMENAL

A cross between the Black Raspberry and the Blackberry. Berry very large and sweet, good grower bears well, of a dark red color, adapted to California and the southern states. 25c each postpaid.

GRAY'S GARDENA DEWBERRY

A new Dewberry originated by W. M. Gray, of Gardena, California. It has completely revolutionized the berry industry in Los Angeles and many other cities of Southern California. The amount of berries produced by this berry is marvelous, there is no berry that can compare with this berry in point of production or quality of fruit. The parent plants of the Gardena came from Michigan so there is no doubt of Gardena being adapted to all parts of the U. S. A.

All Goods Packed and Boxed Free of Charge

AMERICAN GRAPES

CONCORD

An old standard and popular grape—bunch large, berries large, skin tender, carries well to markets, flesh juicy and sweet, a strong grower. Very hardy and productive. Does well in Southern California. Color black.

CATAWBA

A red grape, very popular, does well nearly all over the U. S. A. In Southern California it seems to be at home. Bunch large, berries large, flavor very good, tough skin, a good market berry, sells on sight in the California markets.

DIMMOND

An early white grape of good quality—few seeds, juicy, a little above the average size, good market grape. Does not seem hardy with us. Does well east of the Rocky mountains.

NIAGARA

Bunch and berries large, color white, skin thin but tough, of a very good quality. Very hardy and a very good grower. Well adapted to California. One of the few American varieties that does well in Southern California. Californians should plant largely of this sort. Makes a good arbor.

IONA

A red grape of fine quality. Berries medium, hardy grower, juicy, a good market grape. Californians should plant this grape. Does well in California, productive.

All Goods Packed and Boxed Free of Charge

EATON

Black berries large around. Bunches large and compact, one of the best for California.

VERGENNES

A large red grape of good quality, strong grower, hardy, productive, the best red grape for Southern California, very sweet and juicy.

ROMEL

A white grape of extre quality and fine flavor, productive, very sweet, good grower, does well in Southern California.

FOREIGN GRAPES

The following named grape vines are of European origin and will not stand cold climates without protection :

MUSCAT WHITE

The well known raisin grape, bears wonderful crops, 4 to 6 tons per acre are not uncommon, flavor very good—hardy, good table grape, very sweet, bunches very large, specimen bunches weighing from 6 to 8 pounds.

TOKAY

A large red, late grape—a good shipper, should be planted for market and table use only.

TOMPSON'S SEEDLESS

An early raisin grape, ripens in July—a fine table grape, sweet, good grower, yields heavy crops, bunches large, berries medium. Cannot be surpassed for preserves and canning, seedless, color white.

BLACK HAMBURG

Bunches large, berries round and large, very sweet and juicy, extra good table grape.

MISSION

Purple black, bunches shouldered, berries medium, very sweet and juicy. A very good table and wine grape.

We carry a full line of grape vines; would be pleased to receive your orders.

PALMS**ERYTHEA EDULIS**

One of the finest Fan Palms grown in Southern California, it being a native of the extreme southern part of California and southwest Mexico. Extensively planted as street trees in Southern California. Fine specimen Erythea Edulis can be seen on famous Victoria avenue, Riverside, California.

LATANIC BORBONICA

A beautiful lawn palm, also used for decoration. Leaves large, fan shaped, a native of the Isle of Bourbon.

PHOENIX CANARIENSIS

A most beautiful Palm. A grand Palm for streets, parks and lawns, also fine for a house plant. Many fine specimens can be seen in Riverside, California, where they grow to perfection. Leaves pinnate.

P. DACTYLIFERA

The Date Palm—a handsome Palm, leaves pinnate. In Southern California it grows to a great height. Many specimens can be seen at San Diego and San Luis Rey, California, where they were planted over 125 years ago by the Spanish padres. Lives to a great age and yields the date fruit of commerce.

All Goods Packed and Boxed Free of Charge

P. RECLINATA

A native of Cape of Good Hope—a very fine pinnate leaved Palm, a beautiful avenue Palm. Will stand severe frosts, adapted to Southern California.

P. SYLVESTRIS

Wild Date Palm of India, very hardy, leaves long and arched and of a glaucous green color, 30 feet, called the Sugar Palm by many.

CHAMEAROPS EXCELSA

Leaves fan shaped, one of the hardiest Palms in California, is not as rapid a grower as some, should be extensively planted where the more tender Palms would freeze, height 30 to 40 feet.

C. HUMILIS

A dwarf grown Fan Palm from the Mediterranean. Stems short and thorny; perfectly hardy, a fine Lawn or Pot Palm.

WASHINGTONIA ROBUSTA

One of the grandest Palms grown in Southern California. Fan leaved, fast grower—many specimens can be seen at Riverside, California, from 60 to 100 feet high. Grand for avenue planting, a native of Southern California.

W. FILIFERA

The well known Fan Palm of California. Fine for avenues. Miles and miles of this Palm can be seen on Magnolia avenue, Riverside, California, rapid grower. A native of Southern California. Write for prices on large quantities.

AGAVE AMERICANA

The so-called Century plant. Planted for avenue purposes in Southern California. A beautiful pot plant,

grows to a large size, will stand severe frost. Ought to do well out doors in the Southern states. 25c each by mail prepaid.

BAMBOO

Good for wind brakes and makes a good hedge—also fishing poles. Price 25c each prepaid.

APRICOTS

EARLY NEWCASTLE

The best early Apricot grown in California, 3 to 4 weeks earlier than the Royal, good grower, bears good crops and is a good shipper. A good variety for the desert regions for early markets, ripens from May 20th to June 10th.

PEACH

ALEXANDER

Medium, greenish-white, juicy and sweet, ripens early in July.

DEWEY

A new Peach from the south, flesh is yellow, the tree is a vigorous grower, a good shipper, quality extra good for an early Peach, does well in Southern California, ripens early in June.

ELBERTA

Large, yellow, firm, flesh yellow, good quality, one of the leading Peaches of California, ripens after Early Crawford.

ORANGE CLING

One of the best Clings in cultivation, color deep yellow, large, ripens in August.

All Goods Packed and Boxed Free of Charge

PEAR

BARTLETT

Large, juicy, a great bearer, the best all around Pear for California.

KOONCE

Yellow with carmine color, very early, a good market sort.

KEIFFER

One of our best keepers, extra good shipper, ripens in November.

WINTER NELLIS

The leading early winter pear in California, of fine quality, a great bearer, extra fine flavor, ripens November, keep until March.

PLUMS

BARTLETT

Tree a strong upright grower, fruits the second season, skin red, flesh yellow, ripens in August.

SATSUMA

Blood, large, color purple, flesh dark red, fine quality, vigorous grower, ripens in August.

WICKSON

A very handsome fruit, heart shaped, color deep maroon, covered with white bloom, flesh yellow, quality fine, good shipper, vigorous grower, ripens in September.

APPLE

EARLY HARVEST

One of the best apple trees for general planting, pale yellow, very sweet.

RED ASTRACHAN

Large and sweet, should be largely planted in Southern California, color deep crimson.

NORTHERN SPY

One of the best for general planting in California, large, striped, very rich flavor.

RHODE ISLAND GREENING.

Large, greenish yellow, rich acid, does well in Southern California.

YELLOW BELLFLOWER

One of the best for general planting, large, a long keeper.

Boston Fern	Japanese Holly Fern
Dwarf Sword	Asparagus Springeri
Common Sword	“ Plumosa
Maiden Hair	And many other varieties

BEE FEED

Price, Rooted Plants, \$1.25 per doz., Cuttings, 75c per doz.

Withania organifolia is a new bee forage, recently introduced into the United States, which gives every indication of becoming one of the most valuable plants of recent introduction. It is particularly adapted to the arid plains of the West, as it grows without irrigation. It blooms continuously from May to to December, and is covered with small, bell-shaped flowers, which produce an unusual amount of honey of high quality.

It is propagated from cuttings or from seed and can be planted 3 or 4 feet apart. From 1 doz. plants enough can be secured to plant one acre after the first year's growth.

Special Bargains

For \$1 per each No. or set we will send the following trees and plants by mail prepaid. These prices apply only to plants catalogued, we reserve the right of substitution where our lines are broken:
