IMPORTANT *Read Before Ordering*

Our Hardy Native Plants are shipped direct from Highlands Nursery, in the western North Carolina mountains, from Pineola, N. C., freight station. The present freight rate to New York, Boston and Philadelphia is 96½ cents per 100 pounds. Special express rates, connecting with Norfolk steamers.

We claim superior packing, our export shipments reaching the most remote countries in perfect condition. Packing charged for at cost.

Foreign Remittances should be sent by International Postal Money Order, drawn on Boston, Mass., Post Office, or by New York or Boston Exchange. An American dollar is equal to a little more than four (4) English shillings, four (4) German marks, or five (5) francs.

Claims must be made immediately on receipt of goods. All shipments travel at consignee's risk.

Shipping begins in August, when we send out large Rhododendrons, Kalmias and other Evergreens, and Bulbs and Herbaceous Plants; general stock going out in October and November, and in spring, from about March 1 to May 15. Give shipping instructions unless you wish to leave it to us. We use our best judgment, but assume no risk.

INSPECTION. Our Nurseries are inspected by the North Carolina Commission for Controlling Crop Pests, and certificate of inspection is sent out with every shipment.

HARDINESS. All stock offered in this catalogue is noted. **STRICTLY HARDY**, unless specially noted.

RETAIL CATALOGUE. A beautifully illustrated and descriptive retail Catalogue of Hardy American Plants sent on request.

Purchasing Department.—We have special facilities for inspection and purchase of fine nursery stock other than native, and are pleased to submit estimates on any list, our prices being low and service unexcelled.

THE TRUE

Rhododendron catawbiense

CAROLINA RHODODENDRON

IT is with great pleasure we offer for the first time in America or abroad a complete stock of the **RARE RHODODENDRON CATAWBIENSE** (true species), in sizes from small plants to large clumps. Do not confuse this with the **common** so-called **catawbiense** imported from Europe, which is in reality a half-hardy, poor-flowered hybrid with some **catawbiense** blood in it. The true species grows only in the highest Southern Alleghany Mountains, and is the **finest of all Rhododendrons**, considering its extreme hardiness, color of flower, and remarkable texture of foliage, which is a deep shiny green, far superior to that of the better known **RHODODENDRON MAXIMUM**.

For massing and producing a broad-leaved evergreen effect, there is no plant equal to it in the latitude of the northern United States, where strictly hardy plants must necessarily be used. Unlike **R. maximum**, it is a **free bloomer**, the large trusses being a **bright red-purple** color, in marked contrast to the **muddy purple** of the common half-hardy hybrid noted above. All plants offered below are **HEAVY CLUMPS**. Packing is done in **boxes**, or the larger sizes in **crates**, and is charged at cost. These clumps often have 30 to 50 stems, and are bushy to the ground. We offer both collected and transplanted clumps, the price being the same. The difference is made up by increased diameter in collected clumps.

For use as a finished edging for **Rhododendron maximum** and **Kalmia** plantations, the value of **R. catawbiense** cannot be over-estimated. Write for further particulars.

PRICES

CLUMPS ALL THICK AND BUSHY TO THE GROUND	{		Per 10	Per 100
		6-9 in., transplanted only	\$2.50	\$20.00
		9-12 in., transplanted only	3.50	30.00
		1-1½ ft., transplanted only	5.00	45.00
		1½-2 ft., transplanted or collected . .	12.50	100.00
		2-3 ft., transplanted or collected . .	20.00	175.00
		3-4 ft., transplanted or collected . .	40.00	350.00

Extra selected Clumps, \$5.00 to \$10.00 each, according to diameter and furnishings.

Do not compare the many-stemmed clumps offered above with the single-stemmed "bushy" half-hardy Rhododendrons offered by importers. There is no comparison.

We offer some large clumps with fine bushy tops, but thin-foliated at the bottom, for use in the center of large masses, at reasonable prices.

RHODODENDRON MAXIMUM

The Great American Rose Bay

and KALMIA LATIFOLIA

The Mountain Laurel

PERFECTLY HARDY IN THE LATITUDE OF QUEBEC

THE use of large native Rhododendrons and Kalmias, usually collected clumps, for producing immediate, finished, broad-leaved, evergreen effects is so well established as to scarcely need comment. There is no other possible way to obtain the result to be had by the use of these magnificent hardy evergreens. We sell both collected and nursery-grown clumps in any quantity. Our facilities and long experience are approached by none, and the quality of stock we handle cannot be duplicated.

Our nursery-grown stock is in Kawana and Boston, while we collect car-load lots from special sources in the Pennsylvania Mountains and the Carolina Mountains. Prices per car-load of *Rhododendron maximum* vary with size and grade. For large plantations where great quantities are used a mixed grade of sizes, 2½–8 ft. high may well be used at a rate of

\$90.00 PER CAR, F. O. B.

Where extra selection is made, prices are \$110.00 to \$130.00 PER CAR; the freight to Boston, New York, Philadelphia, Buffalo and similar points is \$27.00 to \$40.00 per car. Number of plants to the car varies from forty or fifty to several hundred, according to size and grade.

The sizes of *Kalmia latifolia* are 2 to 4 feet; the price per car \$100 00 to \$125.00, according to grade and size.

RHODODENDRON MAXIMUM.

Prices by the Plant

RHODODENDRON MAXIMUM

Transplanted Clumps, 6-12 in.	Per 10	Per 100
" " 1-1½ ft.	\$2.00	\$18.00
" " 1½-2 ft.	3.50	30.00
" " 2-3 ft.	7.00	60.00
" " 3-3½ ft.	15.00	140.00
" " 3-3½ ft.	35.00	

Very extra heavy specimen clumps, any size, are charged for according to diameter and grade. A 2-ft. clump may often be furnished better than even a specimen 6-ft. clump. We send out no poor stock. COLLECTED CLUMPS, 2 to 8 ft. high, from \$1.00 to \$10.00 per clump, according to size and furnishings.

KALMIA LATIFOLIA

Transplanted Clumps, 9-12 in.	Per 10	Per 100
" " 1-1½ ft.	\$2.50	\$20.00
" " 1½-2 ft.	4.50	40.00
" " 2-3 ft.	8.00	75.00
" " 2-3 ft.	20.00	160.00

Collected Clumps, 2-5 ft., selected, from \$1.00 to \$8.00 each.

For prices of *R. Catawbiense*, *R. maximum* and *K. latifolia*, small bushy nursery-grown stock, 3 in. to 2 ft., see pages 13 and 14. Over 1,000 growing in Highlands Nursery.

RHODODENDRON PUNCTATUM.—See page 14 for prices of this rare species. LEUCOTHOE CAESBEI, GALAX APHYLLA and other fine undershrubs for Rhododendron plantations are described and priced on pages 12 to 14.

For How to Make a Successful Rhododendron Bed," see back cover, outside.

COLLECTED PLANTS

This is a Catalogue of nursery-grown plants, *unless specially noted*, but many can be supplied in strong, collected stock when desired.

Our facilities are unapproached elsewhere for collecting the best stock at a low cost, and an experience of 19 years and well-trained collectors enable us to assure buyers that orders for “collected” plants will receive the same attention and care as though we intended planting the stock ourselves. As a rule, however, we do not recommend the extensive use of collected stock and cannot guarantee it in any instance, excepting large evergreen clumps specially advertised.

This grand new Hemlock, introduced by us, possesses a distinct pyramidal growth, and attains a height of 40 to 50 feet. Its dense, dark foliage and graceful habit are approached only by some of the finer Japanese Hemlocks, which it somewhat resembles. Some fine specimens are now to be seen in the Arnold Arboretum, being the first plants of this Hemlock ever sent out, and supplied by us to Prof. C. S. Sargent, Director, in 1884.

NATIVE AZALEAS (Strictly Hardy)

The American Azaleas are among the choicest of all ornamentals, exotic or native, and were but rarely seen in cultivation before being disseminated by **Highlands Nursery**. Large masses of the "Great Flame-colored Azalea," *A. calendulacea*, when seen in flower, present the most gorgeous effects, the shadings varying from deep crimson to a bright sulphur-yellow, and its complete hardiness is unquestionable. The foliage of *A. arborescens* is the finest of all the Azaleas, remaining a clear, shiny green throughout the summer, a characteristic not usual with this family. The large, white, sweet-scented flowers appear the last of all the Azaleas, and the numerous pink-tipped stamens protruding give a most beautiful effect. *A. vaseyi* is one of the finest introductions of late years; the flowers, appearing before the foliage in April in the greatest profusion, are white to deep pink; attains a height of 12 to 15 feet. *A. nudiflora* (deep pink) and *A. viscosa* (white) are pretty, dwarfier varieties, very useful in the under shrubbery.

GALAX LEAVES

GALAX APHYLLA (Galax, or Coltsfoot)

A low ground-covering evergreen with heart-shaped crenate-toothed leaves of striking beauty. The white flowers are borne on a scape 12 to 18 inches high. The thick leaves turn brilliant shades of bronze, red and crimson in autumn, remaining so through the winter. We introduced the leaf to the florists' trade for decorating purposes, and they are now used by millions. A remarkable ground-covering plant, particularly for use in the Rhododendron bed.

LEUCOTHOË CATESBAEI, Catesby's Leucothoë

Few, if any, evergreen shrubs of the broad-leaved sort have the grace and elegance of this one. The thick, shining leaves are evenly disposed on long, recurved branches, along which the dense racemes of white bell-shaped flowers hang. As an undershrub, or for banks of streams, or for finishing the borders of rhododendron and other evergreen planting, it is without a rival. The "sprays" make beautiful winter decorations indoors, often turning a rich bronze in fall or winter.

PARTHENOCISSUS (Ampelopsis) engelmanni. This is the clinging form of the well-known Virginia Creeper, and was introduced by us several seasons ago. The leaves are much thinner and smaller than in the ordinary variety, and the whole plant lacks the coarseness that characterizes *A. quinquefolia* and it clings to walls like the ivy. The fall coloring is exceedingly brilliant, and in every way it is vastly superior to the common form, which is not used where the new variety is known and can be had. A fine stock ready for fall delivery. **Highlands Nursery introduction.**

LILIUM SUPERBUM (Turk's Cap Lily)

No description will do justice to this magnificent American Lily. A clump of them is literally a blaze of scarlet and gold. For years we have made the growing of this Lily a specialty, and send out thousands of bulbs every season. Our stock this season is very fine, and we are offering it at a low price for the benefit of large planters and those wishing to catalogue it. Of special use for planting in rhododendron beds. Note the low prices:

How to Make a Successful Rhododendron Bed

By this we mean a place for the proper reception of Rhododendrons, Azaleas, Kalmias, Leucothoes, Andromedas, Galax and other ericaceous plants that require special treatment to make them thrive permanently and satisfactorily. These plants are all surface feeders in part, and must have cool, moist loam to draw nourishment from.

WHERE POSSIBLE, choose a NORTHERN EXPOSURE with shade (it is usually the winter sun on the frozen leaves that kills Rhododendrons), with good drainage, but where moisture is natural or readily obtainable, excavate 2 feet or more in depth, filling in with equal parts of good leaf-mold or other decayed vegetable matter and rich loam, with a tenth or more sharp sand, and a liberal application of *well-rotted* stable manure. Where the soil is heavy limestone, excavate 3 feet deep and 5 feet from the border of the planting, and fill in as above and water with rain- or cistern-water if possible.

RHODODENDRONS GROWING AT HIGHLANDS NURSERY. FROM PHOTOGRAPH

Always keep the Rhododendron bed heavily mulched the year round, using forest leaves where available, or spent tan, old hay, etc., letting this covering decay from year to year, thus giving a continual supply of the mold and humus absolutely essential to the Rhododendron's and Azalea's successful growth.

Galax aphylla, *Vinca minor*, Ferns, Leucothoes, Andromedas and other ground-covering plants used near the borders give a beautiful finished effect and aid the mulching to retain moisture and keep the surface cool.

Where very extensive plantations are made, and large clumps used, it may only be necessary to choose the most favorable location, and see that the proper soil and drainage exist and the right care be given after planting as before indicated.

The essentials for successful Rhododendron culture are given above.

Where other discouraging conditions exist, we are pleased to take the matter up in detail. Do not hesitate to write us. Always address Boston office.

HARLAN P. KELSEY
