STUART & MEIN

(Incorporated with LAING & MATHER),

KELSO,

SCOTLAND.

GEO. LEWIS & CO., SELKIRK.

ESTABLISHED 1845.

THE OLD-ESTABLISHED SEED WAREHOUSE AND NURSERIES,

KELSO, SCOTLAND, 1st January, 1904.

N presenting our **GARDENING GUIDE AND CATALOGUE** for 1904, we trust that with the coming seed-sowing season in view, the contents will, on receiving a careful consideration, prove both interesting and instructive.

To the numerous Customers who have for a long period of years supported us, we tender our warmest thanks, assuring them that, as heretofore, no effort will be wanting on our part to merit and retain their confidence by supplying only the finest strains of Vegetable and Flower Seeds, &c., of the highest possible germinating power.

To those who have not hitherto patronised our firm we commend our Seeds, Bulbs, Plants, &c., to their favourable attention. For upwards of half-a-century we have held a name throughout the length and breadth of the land for first-class Seeds for the Kitchen and Flower Garden and for the Exhibition table; and we respectfully solicit a trial order, feeling sure that the result will be complete satisfaction.

Our Forest Trees are quite up to the standard of quality of former seasons; and as all are vigorous, hardy, and well-rooted, they may be relied upon to give entire satisfaction. Our stocks of Ornamental Trees and Conifers are large and varied. Roses, Carnations, Pæonies, and Rockery Plants form leading features in the Nurseries, only those varieties being grown that are of strong and robust constitution, free growth, and free blooming qualities. Fruit Trees, Gooseberry and Currant Bushes, Loganberry, and other New Hybrid Berries, form a speciality.

Soliciting the favour of your early orders, which shall have our most careful attention,

We are,

Your obedient Servants,

STUART & MEIN.

Telegraphic Address—"LAINGS KELSO."

National Telephone—No. 814.

TERMS OF BUSINESS, ETC.

CARRIAGE.—All our Vegetable Seeds, Flower Seeds, and Bulbs are delivered free by Post or Rail to any part of the United Kingdom. Potatoes and other Vegetable Roots—such as Rhubarb, Shallots, Mushroom Spawn, &c., are also delivered free if the amount of the Order, including these, be Ten Shillings and upwards. Fruit Trees, Forest and Ornamental Trees, are consigned at Owners' risk, carriage forward.

PAYMENT.—Small Orders (from Customers not having a ledger account with us), must be accompanied by a Cash remittance, and Orders from unknown Customers by this or a banker's reference. Cheques and Money Orders may be made payable to STUART & MEIN, Kelso.

ACCOUNTS.—In the absence of special low quotations, &c., our terms are Six Months' Credit—accounts being then due "net"—or 5 per cent. discount may be deducted if paid within 14 days.

RETURNS.—Full value will be allowed for all Hampers, Bags, and Boxes, if returned at once, in good condition, carriage paid, and a post card sent announcing their despatch.

GARDENERS and FORESTERS.—We are always in a position to recommend thoroughly practical Scotch Gardeners, Foresters, and Farm Bailiffs of good character, and shall be pleased to supply particulars on application.

OUR POPULAR COMPETITIONS.

MEIN'S No. 1 CABBAGE.

Champion Cabbage Competition.

SEVEN GUINEAS CASH PRIZES.

NO ENTRY MONEY, BUT CUSTOMERS ONLY.

OUR CHAMPION CABBAGE COMPETITIONS have always been attended with most gratifying results, and the keen appreciation in which they are held by so many enthusiasts, induce us again to offer a number of Cash Prizes for MEIN'S No. 1 CABBAGE, which still holds its own in the world of horticulture to-day. **1s per oz. Post Free.**

Owing to our Southern customers having a more favourable climate, we have decided to divide our Prizes, as on former occasions, between two divisions—NORTH and SOUTH. Our Prizes, therefore, for 1905 will be between two divisions—North and South—the North to consist of Scotland, Northumberland, Cumberland, Westmoreland, Lancashire, Durham, Yorkshire, Derbyshire, Nottinghamshire, Leicestershire, Rutland, Northamptonshire, Lincolnshire, Huntingdon, Cambridge, Norfolk, and Isle of Man; the South, the remaining Counties of England, Wales, Ireland, and the Channel Islands. The division may not be geographically correct, but meteorologically we think it is a very fair one, as we have carefully considered the average temperature of each County.

We therefore offer Two First Prizes of 20s each, Two Seconds of 17s 6d, Two Thirds of 12s 6d, Two Fourths of 10s 6d, Two Fifths of 7s 6d, Two Sixths of 5s 6d.

For the Heaviest and Best MEIN'S No. 1 CABBAGE grown in the Northern and Southern Divisions respectively.

THE COMPETITION

WILL TAKE PLACE ON

26TH MAY, 1905.

Each Competitor must have his Cabbage lifted entire, washed clean of soil, and weighed correctly in the presence of two witnesses, who, with the grower, will require to fill up the certificate referred to below, and post it so as to reach us on the 24th MAY, 1905. If necessary, the Competitors having the heaviest Cabbages will require to send them to us, so that the weight and identity may be verified. The result of the Competition will be published in *Gardening Illustrated*, *Amateur Gardening*, and *The Gardener*, on 17th June, 1905.

Along with every purchase of Mein's No. 1 Cabbage Seed a Certificate will be sent, bearing a registered number, and this must be retained by the purchaser, duly filled up and returned, as per the directions given on same.

LYON LEEK COMPETITION.

CHAMPION LEEK COMPETITION, £5 CASH PRIZES.
No Entry Money, but Customers only.

For the successful cultivation of this fine vegetable see the cultural remarks under "Leeks" in the body of the catalogue (page 10).

THE LYON LEEK.

The finest exhibition Leek in cultivation, and has taken more prizes than all others added together. It has light green leaves, matures very early, and has a long blanch of twelve to eighteen inches, with the purest grain, and proportionate thickness. At the great Vegetable Conference held in Chiswick Gardens, London, September, 1889, the specimens sent by us completely outrivalled all others, and received the highest award, the Royal Horticultural Society's First Class Certificate of Merit. 1s per Packet.

We offer the following prizes—

For the best three Lyon Leeks—1st, 20s ; 2nd, 17s 6d ; 3rd, 15s ; 4th, 12s 6d ; 5th, 10s ; 6th, 8s ; 7th, 7s ; 8th, 6s ; 9th, 5s.

THE COMPETITION WILL TAKE PLACE ON 11th NOVEMBER, 1904.

Each Competitor must have his 3 Lyon Leeks lifted entire, washed clean of soil (careful packing should be attended to) and sent to us either by parcel post or passenger train, carriage paid, so as to reach us not later than the evening of Wednesday the 9th November. The result of the competition will be published in "Gardening Illustrated," "Amateur Gardening," and "The Gardener," on 26th November, 1904.

Along with every purchase of Lyon Leek seed, a certificate will be sent bearing a registered number, and this must be retained by the intending competitor, and duly returned to us in accordance with the instructions given on same.

The Lyon Leek, 1s per Packet.

STUART & MEIN'S

(Incorporated with LAING & MATHER)

GARDENING GUIDE.

PEAS.

THE Pea is in many respects the most important crop cultivated in the kitchen garden, and for its proper development the ground must be well prepared by deep digging and plentiful manuring. For the earliest crops a sheltered border with southern aspect should be selected, and thoroughly trenched to the depth of $2\frac{1}{2}$ feet, with the bottom trench well broken up, and enriched with good farmyard manure, leaving the surface lumpy and unbroken till the time of sowing. Sow about the end of January or as soon as the ground is fairly dry, using some old potting soil to ensure that the seed does not come in contact with excessive dampness, and it will be advisable to stick short branches of spruce fir along the east side of the rows to break the force of cold winds. The varieties to succeed the first Earlies should be sown early in February, in a warm sheltered part of the garden; and those for the Main Crop in the open quarters at intervals of a fortnight, from March till the middle of May; the rows for the dwarf kinds should be six feet apart, and those for the tall kinds eight feet, the spaces between to be occupied by Broccoli, &c. The best method of sowing is to open shallow trenches the width of the spade, and scatter the seed thinly and evenly along the flat bottom, afterwards covering up with finely broken soil to the depth of three or four inches. It is advisable to commence earthing up at an early stage of growth, raising a small ridge on each side of the row so as to form a protection and facilitate watering. The peas should be staked when about a foot high, or when the climbing tendrils appear, taking care not to bring the top of the stakes too close together. As a rule, peas may be gathered in twelve or fourteen weeks from the time of sowing.

Earliest Varieties.

Border Chief: New Early Wrinkled Marrow.—A Grand new Early Wrinkled Marrow variety, of undoubted merit, and one that is destined to take a leading place among Early Peas, ripening along with that well-known variety, *William the First*. The pods are of good size, filled with large peas, possessing the rich flavour and quality of the *Ne Plus Ultra* variety. It attains a height of only 4 feet, is very productive, and is most valuable both for exhibition and table use. Trial packet, 1s; per Quart, 3s.

	Per Quart—s	d
Chelsea Gem , an extra early dwarf variety, bearing an abundance of handsome well filled pods, excellent flavour; 1 foot - - - - -	2	4
Earliest of All , a round blue pea of hardy constitution, maturing uniformly; splendid for market work; 2 feet -	1	6
English Wonder , a dwarf wrinkled pea of excellent flavour; fine for early borders; $1\frac{1}{2}$ feet - - - - -	2	0
Exonian , a first early wrinkled marrow, bearing dark green, finely-flavoured peas; 3 feet - - - - -	1	9
Gradus , a grand first early pea, bearing large, deep green, well filled pods; 4 feet - - - - -	2	6

	Per Quart—s	d
May Queen , a dwarf wrinkled marrow pea, bearing long straight pods of deep green, well-flavoured peas; 2 feet -	2	0
Sangster's No. 1 Improved , first early sort; 3 feet - - -	1	0
The Herald .—Crop failed.		
William Hurst , a very productive dwarf wrinkled marrow pea of excellent quality; 1 foot - - - - -	2	0
William 1. , a very productive and hardy pea, much prized for the table, the deep green pods keeping long in condition; 3 feet - - - - -	1	6

Second Early Varieties.

	Per Quart—s	d
Alderman , a very productive green wrinkled marrow, of robust branching habit, bearing straight handsome pods, well filled with large peas of delicious flavour; 5 feet -	2	0
Athlete .—This Pea has such remarkable properties that its description seems almost incredible. Each plant produces 4 to 8 stems of $2\frac{1}{2}$ to 3 inches in circumference. When the main stem, 3 feet high, commences to flower, the other or branch stems start to grow from the root, and of course bear later. The productiveness of this pea is amazing, a single plant often producing as many as 200 pods. Per packet, 6d and 1s.		
King Edward VII. a splendid dwarf wrinkled pea, of robust growth, and very prolific. The pods are in pairs, and contain 8 to 10 large peas of fine flavour., 15 to 18 inches. Per Pint, 2s.		

	Per Quart—s	d
Duke of Albany , a splendid exhibition pea, with large handsome pods well filled with deep green, exquisitely-flavoured peas; enormous bearer; 5 feet - - - - -	2	0
Laxton's Supreme or Fillbasket , a robust branching-habited pea, bearing broad pods of deep green colour; splendid for marketing; 4 feet - - - - -	1	4
Prince Edward , an invaluable exhibition variety of robust constitution, carrying an enormous crop of deep green, long, handsome pods closely packed with from 11 to 13 dark green peas of the finest flavour; 5 feet - - -	2	6
Telegraph , pods large and fine; 4 feet - - - - -	1	6
Telephone , a splendid green wrinkled pea, bearing large handsome pods of deliciously flavoured peas; 5 feet -	1	9
Triumph , a very fine wrinkled pea, bearing enormous crops of moderate-sized pods, closely packed with large peas of the finest flavour; 2 feet - - - - -	1	9

PEAS—Continued.

Main-Crop and Late Varieties.

	Per Quart—s.	d.
Autocrat Improved , the finest late pea yet raised, doing well in all localities. It possesses a robust constitution, is very prolific, and the quality is all that can be desired; 5 feet -	2	6
Daisy , a splendid dwarf wrinkled marrow of robust habit, bearing a heavy crop of handsome pods well filled with deliciously-flavoured peas; 2 feet -	2	6
Dr Maclean , a grand old sort, bearing enormous crops of well filled pods; invaluable for market; 3 feet -	1	6
Gladstone , a grand pea, bearing a phenomenal crop of long deep green pods, closely packed with large peas of fine flavour; 3½ feet -	3	0
Glory of Devon , extra choice new sort; very scarce. Per Pint, 2s 6d.		
Hartford Success , a very fine main-crop variety and immense cropper, bearing large pods, each containing nine or ten large peas of a delicious flavour; strong constitution, branching habit; 3½ to 4 feet. Per pint 1s 6d.		
Magnum Bonum , a splendid wrinkled marrow pea, with very long broad pods of the finest form and colour, well filled with large and deliciously-flavoured peas; 3 feet -	2	6

	Per Quart—s.	d.
Ne Plus Ultra , a grand old variety; still the best late pea for flavour, and should be grown for the latest picking; 6 feet 1 9	1	9
Rentpayer , very heavy cropper, bearing an abundance of large pods of well filled peas of fine flavour; 2 feet -	2	6
Sharpe's Queen , a splendid wrinkled marrow pea of very robust growth, bearing large handsome pods, closely filled with deep green peas of the most delicious flavour; invaluable for exhibition; 3 feet -	1	9
Stratagem , a grand main-crop pea of robust branching habit, bearing well formed pods, closely filled with extra large peas of superb quality; 3 feet -	2	0
Veitch's Perfection , a fine old sort of robust habit, cropping heavily, and continues in good condition till late in the season; splendid for market purposes; 3 feet -	2	0
Walker's Perpetual-Bearer , a splendid late pea, flowering and podding continuously till frost sets in; medium-sized pods with peas of capital quality; 3 feet -	2	0

ARTICHOKE.

THE GLOBE Artichoke, of which the flower head is the part used, should be sown early in March, and the young plants put out when ready in rich soil three or four feet apart each way, giving protection with straw during severe weather. The **Jerusalem** Artichoke is quite a different plant, the tubers only being used. The latter may be planted in rows four feet apart, and the stools 1½ feet asunder, and may be left in the ground till required for use.

Jerusalem , tubers - - - - -	3	0
„ New White-Skinned , tubers - - - - -	3	6

ASPARAGUS.

A FIRST-CLASS vegetable, for which there is always a demand, especially as it can be produced during the season when green peas cannot be had, it being an excellent substitute. For open-air culture, a deep friable soil is the most suitable, and if in good condition and fairly rich, no fresh manure is necessary at planting time, the manuring of the crop being best accomplished by means of annual top-dressings. If it is desired to raise plants from seed sow early in April in rows eighteen inches apart, dropping a few seeds in patches twelve inches apart, afterwards thinning to the strongest plant. The most expeditious way to form a bed is to mark off the ground into a space five feet wide, and any length desired, which will accommodate three rows of plants. One-year-old roots are the best, and they should be planted about the end of March, or just before growth commences. The roots must be spread out and the soil drawn over them as the planting proceeds, and pressed firmly down, covering the crown to the depth of two inches. The beds should receive a liberal dressing of cow manure annually at the end of autumn, and if sea-weed can be procured and added, so much the better. The roots can be easily forced in the season from November till April by placing them thickly in a heated pit or dung frame. When a supply is required at any particular date, the roots should be placed in a temperature of 65° for about four weeks previous; and for continuous supplies it is a good plan to place a certain number of roots in heat once a fortnight until it becomes fit to cut from open-air beds.

	Per oz.—s.	d.
Argentieul Giant Seed —A large and fine early variety, much esteemed in France, where it is extensively grown and forced for the Paris as well as the English markets -	0	6
Connover's Colossal Seed , a well known and very popular sort, much in demand -	0	6

	Per 100—s.	d.
Asparagus Plants —1 year old - - - - -	3	6
2 year old - - - - -	6	0
Extra Strong, for forcing, - 14/ to 17	6	

BORECOLE, OR KALE.

A VERY hardy and useful vegetable, much esteemed for winter and spring use. The crop will do well in any kind of soil, and the firmer the better, as then the plants will stand the severest weather. Sow in April or May, and plant out in July or August in rows two feet apart, allowing the same space between the plants.

Mein's Exhibition.—The finest selection of Dwarf Curled Kale in cultivation; perfectly hardy; leaves densely curled so as to completely hide the mid-rib; tender and delicious when cooked; very strongly recommended for all purposes. Per ounce, 1/.

	Per Ounce—s.	d.
Asparagus Kale , a delicious early spring vegetable, the ribs of the leaves having the flavour of Asparagus -	0	6
Cottagers' Kale , very hardy and productive; excellent flavour -	0	6
Dwarf Green Curled , fine strain of this useful variety -	0	4

	Per Ounce—s.	d.
Improved Hearting , grows to a large size, and hearts up nearly as solid as a cabbage; very hardy, and invaluable in winter and spring -	0	9
Variegated , for garnishing and for the decoration of winter gardens. Per Packet, 6d and 1s. -		

BROAD BEANS.

THE course of preparation as that recommended for Peas is equally applicable to this crop, except that it is unnecessary to make more than three sowings, as late sowings are generally small in bulk and inferior in quality. The first week in March is quite soon enough to make the earliest sowing, and for succession one or two others may be made at intervals of three weeks. The rows should be at least six feet apart, and the seeds planted singly at least six inches asunder. When the plants are about four inches high, the ground should be hoed, and a little soil drawn to them. It is a good plan to nip off the tops as soon as they have done flowering, as it induces formation of pods, and removes colonies of the black fly, which is often troublesome and destructive.

	Per Quart—s	d
Bunyard's Exhibition Longpod , the finest and most productive longpod bean, the stems being covered with handsome pods fourteen inches in length, containing six to eight large beans in each - - - - -	1	2
Nettleship's Early Longpod , a splendid early variety for all purposes; enormous cropper; pods long and straight; containing five to six fine beans - - - - -	1	0
Aquadulce , long pod - - - - -	1	6
Beck's Dwarf Green Gem , - - - - -	1	2

	Per Quart—s	d
Windsor, Taylor's Improved Broad , the finest variety for general crop; pods short and very thick, containing two or three very large beans of the finest quality - - - - -	1	0
Windsor, Improved Green Harlington , esteemed for its fine colour and flavour; the exact counterpart of the preceding variety - - - - -	1	2
Early Longpod - - - - -	0	10
Seville Longpod - - - - -	1	2

KIDNEY OR FRENCH BEANS.

ONE of the most tender of all vegetables, and the first to be cut down by frost. The best results are obtained when grown on warm, light, rich soil, and the plants well thinned to allow plenty of room and continuous bearing. Make a first sowing on a warm border the last week of April, and successional sowings in open quarters at intervals of four weeks till the end of July. For the strong-growing kinds a space of thirty inches should be allowed between the rows, and the plants may be nine inches apart, the dwarfer sorts proportionately less.

	Per Quart—s	d
Canadian Wonder , the best variety in cultivation for general crop out-doors; very productive and robust in growth, bearing long straight pods - - - - -	1	6
Earliest of All , an excellent variety for forcing; tender when cooked, and of delicate flavour - - - - -	2	0
Magnum Bonum (Sutton's), the largest podded and most productive of the class; its quality and cropping powers are exceptional - - - - -	1	6
Monster Negro , robust long-podded variety of excellent quality for main crop and exhibition - - - - -	1	6
Negro Long-podded , very prolific, and useful for open ground - - - - -	1	4

	Per Quart—s	d
Ne Plus Ultra , best for forcing; very dwarf and productive - - - - -	1	6
Osborne's Forcing , a good variety to force; prolific and tender - - - - -	1	8
Sion House , fine for open ground - - - - -	1	6
Veitch's Climbing ; combines the best features of the dwarf French and runner beans. The pods are long, brittle, and fine in the grain; 6 to 7 feet high - - - - -	2	6
Wood's Centenary Dwarf Golden Podded , very prolific, and early. The pods are golden yellow, quite stringless, unequalled for flavour and tenderness. Per packet, 1s; per half-pint, 1s 6d. - - - - -		
All kinds mixed - - - - -	1	4

RUNNER BEANS.

A VERY prolific and excellent vegetable, and one of the most profitable in gardens of small size. They are not particular as regards soil, except that for continuous bearing it should be rich and deeply stirred. The rows should be not less than twelve feet apart, and the seeds may be planted one foot asunder any time after the first week in May; another sowing early in June will give a good supply till cut down by frost. The plants must be securely fastened to stakes eight feet high, and pinched when they reach the top. In order to gain a long succession of straight brittle pods, the earliest ought to be closely gathered.

	Per Quart—s	d
Champion Scarlet , an improved selection; heavy cropper, pods long and tender - - - - -	1	10
Neal's Ne Plus Ultra , a greatly improved selection of the old <i>Scarlet Runner</i> ; wonderfully prolific, bearing perfectly straight and uniform pods of from 10 to 14 inches in length, fleshy and tender when cooked; the great exhibition variety - - - - -	2	6

	Per Quart—s	d
Painted Lady , fine old variety, with scarlet and white flowers; very prolific - - - - -	1	10
The Czar , the largest of all the White Runner Beans; pods of gigantic dimensions; enormous cropper, and invaluable for exhibition - - - - -	3	0

BEET.

A MOST useful vegetable, which may, by careful storing, be had all the year round. The crop should follow one which has been heavily manured, when all that is required is to dig deeply and have it broken up finely to prevent forking at the roots. Sow a portion of the *Egyptian Turnip-rooted* for early use about the middle of April in shallow drills one foot apart, and thin out the plants to nine inches apart. The main crop, for winter and spring use, may be sown a month later, and lifted in November. When storing the roots cut off some portion of the crown, taking great care to avoid wounding the fleshy part. The roots should be laid horizontally in a bed of dry earth or sand in a place safe from frost.

Mein's Exhibition Black.—The finest exhibition variety in cultivation. The flesh is firm and free of rings, of a rich deep blood crimson colour, almost black, and quite free of any hard strings. The flavour is excellent, and if sown early it grows to a large size. Per Packet, 6d and 1s.

BEET.—Continued.

	Per Ounce—s	d		Per Ounce—s	d
Goldie's Superb Black , a favourite exhibition variety; the flesh being of a remarkably dark blood-red crimson colour, without any sign of hardness; fine flavour, and obtains a medium size. Per Packet 6d and 1s - - - - -			Dewar's Northumberland , a splendid culinary variety, of handsome form, and deep crimson colour; the flesh is tender and of the finest flavour - - - - -	o	6
Dell's Black-leaved , a fine selection, with dark red leaves; much used for ribbon borders in flower garden - - - - -		1 0	Nutting's Selected Dwarf Red , a fine dark variety, of rich deep colour and splendid flavour; the best for general use - - - - -	o	8
Egyptian Turnip-rooted , early; good for shallow soils, - - - - -	o	6	Pragnell's Exhibition , fine dark fleshed, free from rings and hardness, rich flavour - - - - -		1 0
			Silver or Seakale , the midrib of the leaf cooked like seakale is excellent - - - - -		o 6

BROCCOLI.

THE soil for this crop ought to be rich and deep, but it must be made firm before planting, in order to induce compact growth and check exuberance of leaf growth, thus rendering the plants hardy and enabling them to withstand severe frost. For this reason also the position must be open and exposed, and the plants should never be put out into newly-manured ground. Sow the seeds of autumn and winter varieties in May, and the spring and summer varieties in June, using light rich soil, and giving abundance of room to induce stocky growth. Plant out in showery weather, allowing two feet of space each way, and keep the surface stirred with the hoe during the summer and autumn. The plants that are to heart in spring should all be lifted in October, and re-planted closely on their side, the heads facing north, as this prevents them getting damaged by frost and snow, and also from maturing too quickly.

Broccoli: The Missing Link.—The best late Broccoli grown, the result of many years' careful selecting. It is well named "The Missing Link," keeping up the supply of this useful vegetable during May and to the middle of June, when early Cauliflower (such as our "Little Snowflake") comes in. It is very hardy, the heads are large, of great substance, and pure white. Sow end of June. Per Packet 1s 6d.

Autumn and Winter Varieties.

	Per Ounce—s	d		Per Ounce—s	d
Chou de Burghley or Cabbage Broccoli , very hardy, and mild flavour - - - - -		1 0	Walcheren , one of the best old varieties for autumn use; heads large, and as fine in quality as cauliflowers - - - - -	1	6
Grange's Autumn , a fine selection of this splendid variety; heads very large and compact, pure white - - - - -		1 6	Backhouse's Winter White , a fine self-protecting hardy variety, with large white heads - - - - -		2 0
Veitch's Autumn Protecting , a grand self-protecting variety, with medium-sized pure white heads; forms a capital succession to the <i>Autumn Giant</i> cauliflower - - - - -		1 4	Snow's Winter White , very compact and well protected; heads pure white, firm, and equal to a cauliflower; comes in about Christmas. Our strain is extra selected and perfectly true. Packet, 6d and 1s. - - - - -		2 0
Lee's White Sprouting , very tender and delicious, highly recommended - - - - -		1 0			

Spring and Summer Varieties.

	Per Ounce—s	d		Per Ounce—s	d
Adams' Early White , a well-known and esteemed hardy sort; for use in March - - - - -		1 0	Leamington , one of the best varieties for use in May; heads large and fine - - - - -		1 0
Dilcock's Bride , very hardy, and stands severe weather well - - - - -		1 0	Purple Sprouting , a splendid variety; for use in May and June; very hardy - - - - -		o 8
Knight's Protecting , heads large and well protected - - - - -		1 6	Ledsham's Latest of All , a splendid variety, of great size, coming in very late, with firm snow-white heads - - - - -		1 6
Penzance Early White , one of the earliest spring varieties, producing large heads of excellent flavour - - - - -		1 6			

BRUSSELS SPROUTS.

IN some respects this crop is unsurpassed in utility by any other green vegetable for supplying the table during the autumn and winter, and a large space should be devoted to it. The ground allotted to it should be open to ensure a good circulation of air, and the soil must be deeply trenched and liberally manured. For autumn use sow the seed in a mild hot-bed early in March, and for winter and spring sow in the open air about the middle of April. Plant out the earliest batch in showery weather about the middle of June, and the latest by the end of July. Thirty inches apart each way is a good distance at which the plants should stand, and frequent stirring of the surface soil is of great importance.

Mein's Matchless.—We have pleasure in introducing this superb new variety, and we predict for it a permanent place among this class of Winter Vegetables. The stems are of medium height, and are closely packed with deep green, firm rosettes of deliciously-flavoured large sprouts. We can highly recommend *Mein's Matchless* as an excellent hardy variety for general use and for exhibition. Per Packet, 1s and 2s 6d.

	Per Ounce—s	d		Per Ounce—s	d
Dalkeith Selected , a remarkably fine variety, producing an abundant crop of firm, tender sprouts of delightful flavour - - - - -		o 8	The Wroxton , the most useful variety for market purposes, being very hardy, compact, and prolific; the sprouts are large and firm, and the flavour excellent - - - - -		o 8
President Carnot , a very strong-growing variety, bearing pyramidal stems of very large sprouts; fine for late use - - - - -		1 0			

CRESS.

VERY useful and wholesome salad herb, quickly raised from seed. For winter supply a brisk heat is required, in which it grows very rapidly if sown thickly in boxes. If required, sow once or twice a week out-doors from March to September, and cut whilst young, or before rough leaves appear.

Curled , extra fine - - - - -	per lb. 1/2, per oz., 2d	Golden or Australian - - - - -	per oz., 4d
American , resembles the Water Cress - - - - -	per oz., 4d	Water Cress , - - - - -	per packet, 6d

CORN SALAD.

SOW in August and September for winter Salads, and March and April for summer supply.
Per Packet, 3d and 6d.

CABBAGE.

ONE of the most important of all the kitchen garden vegetables, and may be had for use daily almost the whole year round. To produce really fine cabbages the soil must be heavily manured, and stirred to a depth of two feet, while liberal dressings of soot and lime should be given annually to prevent grub and clubbing at the root. For early spring use sow at intervals of ten days from the middle of July till the middle of August. The best variety for sowing at this time is *Mein's No. 1*, as it comes in very much earlier than any other, is much hardier, and shows no tendency to run to seed. Plant out from this sowing during September and again in March to keep up a succession of fresh young hearts. For autumn and winter supply sow in the open border seeds of the same variety, and also of *Ellam's Dwarf*, *St John's Day*, and *Winningstadt*, or any others that may be desired, planting out in summer after early potatoes or other crops which may be cleared off the ground in time. The small-growing sorts may be planted twelve inches apart in the rows, and the larger sorts eighteen inches to two feet apart each way.

Mein's No. 1 Cabbage—The earliest variety in cultivation.—Selected and grown by us for upwards of thirty years from the earliest hearting plants. This splendid early Cabbage comes into use long before any other variety is ready, and grows to a very large size before bursting. It stands the severe weather well, is not liable to run prematurely to seed, and it is a sure hearting Cabbage. We annually receive hundreds of testimonials from all parts of the kingdom speaking in the highest praise of its earliness, fine quality and appearance, and this, together with the greatly increased annual demand for the seed, conclusively proves its superiority as a market and amateur's Cabbage. 1s per ounce. Special price per pound will be sent on application.

Plants can be had in spring, 1s per 100, post free.

A FEW EXTRACTS FROM LETTERS RECEIVED
LAST SUMMER:—

Inniskillen, July, 1903.—I may tell you that nothing can surpass your No. 1 Cabbage, as every year they seem better than the last.

Berwick July, 1903.—I have grown about 3000 of your No. 1 Cabbage this year, and find them very good.

North Ormesby, July, 1903.—Send three packets of your celebrated No. 1 Cabbage. The last have turned out splendid; not a single one gone wrong out of 600 plants.

Deddington, July, 1903.—I cut earlier than I expected, with good hearts of the usual flavour.

Swalwell, July, 1903.—I am much pleased with my No. 1 Cabbage; have cut some splendid hearts.

Exeter, June, 1903.—I never had anything to equal Mein's No. 1 Cabbage for earliness, solidity, flavour, and size. I planted a bed of over 300, every one of which gave perfect satisfaction.

Bulwell, June, 1903.—At Cabbage Competition, held on June 6th, 1903, there were 34 competitors, all of whom were very keen, but, as usual, Mein's No. 1 were at the top.

Bankham, June, 1903.—The No. 1 Cabbage is a grand Cabbage for early use. I have grown several kinds, but find none can beat Mein's No. 1.

Pembroke Dock, June, 1903.—This order is from a number of my shopmates. They have great faith in your No. 1 Cabbage and other seeds.

Banbridge, Ireland, June, 1903.—The No. 1 Cabbage I got from you last year was most satisfactory, and was by far the best Cabbage I have ever used.

Willington Quay, June, 1903.—I have some of the best No. 1 Cabbage in this neighbourhood. I have grown it 25 years, and have it finer, if anything, this year.

Exhibition Cabbage.—Special shows for spring Cabbages are annually held in many towns and villages in the Midlands, and *Mein's No. 1* has for upwards of thirty years held the lead as a prize-winner at them. When staging, special attention should be given to firmness and purity of colour.

For Prize Competition see page 1.

	Per Ounce—s	d
Couve Tronchuda , or Portugal Cabbage, a delicious and valuable vegetable	-	1 0
Drumhead, Gibson's Dwarf , very dwarf compact habit, and deep green colour; hearts large, broad, and flat; very firm and solid, yet crisp and tender	-	0 6
Robinson's Champion , late or Maincrop variety, immense cropper; hearts large, broad and flat; solid and of excellent quality	-	0 6
Early Large York , strong growing variety, from a splendid stock. Used largely for field growing	-	0 6
Ellam's Dwarf , small compact growth, with smooth deep green leaves: hearts small and pointed, formed very early. A distinct and excellent early cabbage of the finest quality	0	8
Enfield Market , strong growing variety, with broadly ovate-pointed hearts; very solid, crisp, and tender. Much esteemed for market work	-	0 4
Little Pixie , an early variety, and a great favourite in some districts; very solid, crisp and tender	-	0 6

	Per Ounce—s	d
Red Dutch Improved , strong vigorous growth, with large red-grey leaves; hearts large and round, very solid, and deep red colour. Excellent for pickling	-	1 0
Rosette Colewort , small compact growth, leaves rounded and hooded over heart, of deep green colour, tipped rose	-	0 8
St John's Day , a variety of the finest quality for autumn use, of dwarf habit, with broad flat heads, resting nearly on the ground	-	0 6
Sugarloaf , of medium size, hearts large, and in shape resembling a sugarloaf, as indicated by its name. Much in demand for late sowing and general crop	-	0 8
Vanack, or M'Ewan's , an early variety, and a standard favourite among Edinburgh market growers; a specially fine stock	-	0 8
Wheeler's Imperial , dwarf compact growth, with broad conical hearts formed early; very firm, and excellent quality	-	0 6
Winningstadt , medium size, with spreading outer leaves; hearts large, conical, and sharply pointed; very solid	-	0 8

CAPSICUM.

AN exceedingly pretty and useful class of plants for decorative purposes, as well as for culinary uses.

CARROT.

A LIGHT sandy soil is the best for this crop, and to grow fine, clean, and well-coloured roots, considerable attention is necessary to its preparation. Apply the manure early in winter, and trench or dig it over to a depth of eighteen inches, pulverising thoroughly, and expose the surface to the action of frost by throwing it into ridges previous to sowing the seed, fork the soil over when dry, adding at the same time a dressing of wood ashes to the top part as a preventive of grub. Sow early in April in lines one foot apart, and thin out soon after the young plants are fit to handle; at the same time keep the hoe plied regularly between the rows. Lift and store the roots in dry sand where frost cannot reach them. For early crops sow in warm borders in March.

Mein's Model Scarlet Exhibition.—A superb new variety of moderate size, long tapering form, fine skin, and deep red colour. It will prove invaluable to exhibitors, as it combines all the desirable qualities insisted upon by practical judges. Per Packet, 6d and 1s.

Mein's Early Exhibition.—A splendid variety, of fine shape, colour, and quality. It grows to a length of 5 or 6 inches. Flesh very tender, with almost entire absence of core. Per Packet, 6d and 1s.

	PER OUNCE—s	d
Altringham Selected , grown from picked roots; heavy cropper and fine dark red colour	-	0 4
Early Nantes , a splendid half-long early variety, of finest quality, having small core	-	0 6
Early English Scarlet Horn , the finest for early use out doors; bright scarlet colour	-	0 4
James's Scarlet Intermediate , roots short and very thick; fine for shallow soils; heavy cropper	-	0 4
Long Red Surrey , grows deep into the soil; very fine quality and colour	-	0 4

	PER OUNCE—s	d
Prize Intermediate , an exceptionally grand stock; roots of medium length, handsome shape, rich colour; a grand cropper	-	0 6
Red Intermediate , a fine new variety, with bright red skin, and flesh of close texture, with little core; very handsome, and unequalled for exhibition	-	0 6
St. Valery , a variety of the Intermediate type, splendid quality and a good cropper. Also much used for field culture	-	0 4

CAULIFLOWER.

A FAVOURITE summer and autumn vegetable, requiring for its full development a deeply-trenched and heavily-manured soil and an unstinted supply of water in dry weather. The plants from which the early summer supplies are obtained are raised from seed sown about the first week of August, kept over winter in cold frames, and planted out early in May. To succeed these a sowing of *Little Snowflake* or *Dwarf Mammoth* should be made in a mild hot-bed early in February, and at the same time a first sowing *Eclipse* or *Veitch's Autumn Giant* for use in Sept. Other sowings to keep up regular succession may be made in warm positions close to a wall facing south; the plants raised from these sowings must be pricked out when of suitable size, and those sown under glass properly hardened off and planted out when ready, the early dwarf varieties eighteen inches and the *Giant Autumn* varieties two feet apart each way. In all cases when planting out, a deep trench should be cut to give shelter to the early crop and to facilitate watering. When the plants are half grown, the ridges may be levelled with a hoe about the stems to keep them firm.

Cauliflower: Little Snowflake.—This is the finest and earliest dwarf variety in cultivation, producing fine pure white heads of large size and close texture. Heads of this variety sown in February, have been cut as early as autumn-sown *Early London*. Every season we have a large amount of flattering testimony to the excellent qualities of this most delightful variety—Per pkt. 1s 6d and 2s 6d.

	Per Ounce—s	d
Dwarf Erfurt or Mammoth , one of the earliest, producing large, compact, pure white heads; very tender and excellent quality	-	2 6
Early London , a fine second early hardy variety; heads pure creamy-white, well protected; excellent quality	-	1 4
Eclipse , a splendid variety for early autumn use; heads very large and well protected	-	2 0

	Per Ounce—s	d
Snowball , an invaluable early dwarf variety, producing fine, medium-sized snow-white heads; - Per Pkt., 1s	-	-
Veitch's Autumn Giant , a valuable late variety, with large compact white heads; well protected; Pkt., 6d	-	1 6
Walcheren , a very useful second early variety; if sown in succession a supply of fine heads may be had all the season	-	1 0

CHERVIL.

SOW in succession from March to July. The young leaves are much esteemed, and they impart a warm aromatic flavour to soups and stews, and are also in demand for the piquancy they impart in mixed salads.

CELERY.

ONE of the finest vegetables in cultivation, requiring abundance of well-rotted manure and a plentiful supply of water in dry weather. For the earliest crop sow in mild heat early in February, and again in April for succession. That there may be no loss of time, the seedlings should be pricked off into shallow boxes as soon as they are about an inch long, and be kept rather close and warm till they are established. Towards the end of March plant out four inches apart into light rich soil in a cold frame, with a foot depth of manure below to give a start and to bring the plants near the glass. Harden off ready to plant out in mild, showery weather about the middle of May. It is a good practice to prepare the trenches well in advance of the time for planting out by casting out the soil to a depth of two feet and eighteen inches in width for two rows of plants. Place in the bottom of the trench a foot depth of rich rotten manure, and tread it down firmly, after which place six inches of fine, light, rich soil; into this the young plants are to be carefully transferred, avoiding all damage to the roots. In very hot weather branches of evergreens laid over the trenches during the day will afford immense assistance, and from first to last the plants ought never to suffer for want of water, while copious regular supplies of liquid manure should be given when the plants are growing freely. Earthing up should be delayed until the plants are nearly full grown, as the process checks growth and prevents the plants receiving the full benefit from rains and waterings. The process is best performed by carefully wrapping up the stems in several folds of thick brown paper, after which part of the soil from the sides must be broken finely and packed by hand evenly and firmly round the stalks. The earthing up should be done in a gradual manner, and in case of early crops be completed at least three weeks before it is wanted for use. Later crops should receive their final earthing before autumn is far advanced.

CELERY—Continued.

Celery: Mein's Prize White.—An exceptionally grand stock, and a first-class exhibition variety. The stems are very solid, crisp, juicy, and of a rich nutty flavour; and such as we can confidently recommend either for table or exhibition purposes. Per Pkt., 1s.

CUCUMBER.

TO obtain fruit at Christmas the seed must be sown in the middle of August, and for the summer and autumn crops from January till May, according to the demand. Raise the seed in a brisk hot-bed, and re-pot when they have made the first rough leaves, gradually hardening off as they become fit for planting in the frames. To prepare the frame for receiving the plants, make a hollow in the centre of each light nearly half the depth of the dung bed; into this put a quantity of brick bats and rotten dung, covering all at about the level of the bed with a flat square of turf to prevent the possibility of the roots getting through and being scorched; place on this about a bushel of soil in the form of a hillock, one-half composed of good turfy loam, the other half rotted manure, old vegetable mould, and sandy heath soil, well blended. After the plants are established, the only thing required is careful attention to ventilation, sprinkling the bed with water round the frame, and constant care to protect from cutting winds. As to ventilation, a good surface heat being insured, give air day and night less or more, so long as 70° can be secured by day and from 60° to 65° by night.

Frame Varieties.

	Per Packet—s	d
Blair's Prolific , a cross between <i>Lockie's Perfection</i> and <i>Royal Windsor</i> . The fruits, borne in great profusion, are of a deep green colour, heavily bloomed, very symmetrical in shape, and with no neck - - - - -	1	0
Duke of Edinburgh (Daniels), unsurpassed for exhibition, 30 to 36 inches long; finely proportioned, and of a beautiful colour - - - - -	1	0
Frogmore Prolific , heavy cropper, producing very fine symmetrical fruits; flesh solid and of fine texture - - - - -	1	0
Kelway's Paragon , a remarkably productive and very distinct cucumber, with scarcely any neck, averaging 18 to 24 inches in length, and producing fine fruit at nearly every joint - - - - -	1	6

	Per Packet—s	d
Marquis of Lorne , said to be the longest variety in cultivation, with very short neck - - - - -	1	0
Lockie's Perfection : this splendid variety is everywhere recognised as the choicest cucumber in cultivation. Its handsome shape, beautiful colour, and superior flavour renders it the best for table purposes - - - - -	1	0
Telegraph (Rollisson's), immense cropper, length 18 to 20 inches; one of the best for all purposes; true; carefully selected, and grown from original stock - - - - -	1	0

LEEK.

How to grow Exhibition Leeks.

THERE is no vegetable which receives in Scotland so much attention as the Leek; the magnificent examples exhibited at the autumn shows and the liberal prizes offered for competition testify to its popularity. The method of culture here detailed is the result of long and successful experience, and if intelligently followed out will lead to the production of the highest class specimens, and enable any one to win prizes in the keenest competition. The seed should be sown thinly, in a gentle hot-bed, early in February. We are quite opposed to the system of sowing in shallow pans or boxes, and potting off the seedlings, as calculated to check the plants, and cause the leaves to turn yellow. When well started, and the roots have reached the manure composing the hot-bed, the top of the frame may be left partly open in mild weather during the day, and after the beginning of May it should be left open, both day and night, to thoroughly harden off before planting out. Prepare a trench for the plants in the same manner as recommended for Celery, and plant out about the middle of May, if the weather is mild and warm. The plants should stand crosswise in the trench, and be not less than twelve inches apart, in a single line. When finishing give a good soaking of water, and repeat once a-week if dry weather continues. By the middle of July the plants will be ready for the first earthing, and to keep the blanch clean a strip of brown paper six inches wide should be wrapped round the plant, and the soil pressed lightly and equally round the stem up to the division of the leaves; the process may be repeated again a fortnight later, adding another three or four inches. Previous to the first earthing-up the plants should be supplied with liquid manure, and this must be repeated every week afterwards, for the conveying of which directly to the roots a drain tile should be placed on end between every two plants.

LEEK SHOW AND COMPETITION AT KELSO.

We have pleasure in giving the following Extract from the KELSO MAIL, of Wednesday, 11th November, 1903—

It is not only as flower growers that our enterprising local firm of nurserymen and seedsmen, Messrs Laing & Mather (incorporated with Stuart & Mein), have achieved a wide and high reputation, but they have also attained to considerable fame as the vendors of high-class field and garden seeds, the excellent quality and reliability of which have been amply demonstrated in the series of root and leek shows which they have held from time to time. The firm's annual open Lyon Leek Competition, which took place within their premises here on Friday last, was again an unqualified success. There were nine prizes offered, and the conditions were that each exhibit should comprise three leeks, grown from seed purchased from the firm. As showing the wide-spread interest taken in the competition, it may be mentioned that exhibits were sent in from all parts of the country, even from as far south as Devonshire and Cornwall. There was a large entry, and made a very attractive display, the quality and size of most of the exhibits testifying to the superiority of the "Lyon" variety. Friday being market day in the town, a large number of farmers and others interested visited the show. The following were the prize-winners:—1, R. Hood, Dryburgh, St Boswells; 2, A. J. Harrison, Lauder; 3, W. Moore, Nunwick Gardens; 4, John Weightman, Eslington Park Gardens, Northumberland; 5 W. Hodgson, Prudhoe; 6, James Steel, Kelso; 7, Thomas Fairbairn, Benrig Gardens, St Boswells; 8, Thomas Watson, Cannongate, Alnwick; 9, R. T. Rae, Sunlaws, Kelso; specially commended for quality, J. M. Burkett, Dunfermline. The judges were Messrs Charles Street, Floors Castle Gardens, and William Chaplin, Springwood Park Gardens.

The Lyon Leek.—The finest exhibition Leek in cultivation, and has taken more prizes than all others added together. It has light green leaves, matures very early, and has a long blanch of twelve to sixteen inches, with the purest grain, and proportionate thickness. At the great Vegetable Conference held in Chiswick Gardens, London, September, 1889, the specimens sent by us completely outrivalled all others, and received the highest award, the Royal Horticultural Society's First Class Certificate of Merit. Per packet 1s.

LETTUCE.

THIS popular summer salad, to have it in the best condition, requires very rich soil and abundance of water at the roots, the difference in quality as compared with those grown thickly in poor soil being very marked. The earliest are got from sowings made in August and wintered in frames. About the end of January a small sowing may be made in mild heat, to be planted out in early sheltered borders in March and April; afterwards successional sowings may be made every fortnight. Transplant in showery weather, allowing the dwarf early varieties a foot apart and the strong-growing sorts eighteen inches. A good soaking of water and mulching of rotten manure will give them the true crisp tenderness required in a good Lettuce.

LETTUCE.—Continued.

Cabbage Varieties.

	Per Ounce—s	d
All=the=Year=Round , very hardy, compact, and beautifully white ; solid and crisp ; for summer or winter use -	-	1 0
Bossin , enormous size, white and crisp ; splendid for summer use -	-	0 8
Continuity , a remarkably fine variety, tender and crisp, and withstands dry seasons well -	-	1 0
Drumhead , large, white, and tender ; for summer use -	-	0 6

Paris Green , large, solid, and crisp ; fine for spring or summer use -	-	0 8
Paris White , very select, very tall and compact, pure white hearts ; excellent quality -	-	0 10

MUSHROOMS.

THE principal points of successful Mushroom growing are a supply of thoroughly sweetened horse dung mixed with litter or leaves, and beaten quite hard in making up the bed, fresh spawn, and careful regulating of the heat or coverings. After making up the bed, which may be any length desired, but three feet wide at the base and two to two and a half feet deep, are the usual dimensions. The great point to attend to is not to insert the spawn until the heat has come down to 80°, and still falling slowly. Then insert the pieces about eight inches apart, and, so as to be covered, add an inch or two of good soil, beat smooth, and cover the whole with hay or litter to keep away the draughts, and if all goes well a first gathering may be expected in about six weeks after spawning the bed.

Mushroom Spawn, Addey's "Virgin Track," cluster variety ; highly recommended, per cake, 6d. Per Bushel (16 cakes), 5s.

MUSTARD.

VERY useful and wholesome salad herb, and quickly raised from seed. For winter supply a brisk heat is required, in which it grows very rapidly if sown thickly in boxes. If required, sow once or twice a week out-doors from March to September, and cut whilst young, or before rough leaves appear.

Fine White - - - - - per lb., 1s 2d ; per oz., 2d. | **Brown** - - - - - per oz., 2d

PARSLEY.

A MOST useful green herb, required at all seasons of the year for flavouring and garnishing. To grow first-class Parsley the soil should be moderately rich and deeply dug, and the plants should have plenty of room to develop ; the system of sowing the seed thickly and leaving the plants to take their chance cannot be too strongly condemned. Sow the earliest batch in gentle heat in January, and transplant in April ; successional sowings to follow in March and May, the latter sowings to be made in open quarters, and the plants thinned till they stand twelve inches apart each way. For a winter supply cut over a portion of the plants early in August, and as soon as started into growth lift and re-plant in cold frames.

Mein's Exhibition.—A splendid strain for exhibition purposes, of dwarf habit ; leaves deep green colour, and densely curled. Has been awarded the highest prizes at international and other shows during the past seven years, beating all competitors. Per Packet, 6d and 1s.

	Per Ounce—s	d
Extra Select Curled , a specially fine stock -	-	0 4
Champion Moss Curled , fine selection ; very hardy -	-	0 4

	Per Ounce—s	d
Myatt's Garnishing , a superior and beautifully curled strain -	0	6
Somner's Prize , fine strain ; grown from picked transplanted roots -	-	0 8

PARSNIP.

THE finest Parsnips are raised in deep, rather light soil, in good condition, but having no fresh manure added. The soil should be trenched or dug as deeply as possible during the autumn, and in spring the surface should be forked over and broken up finely in dry weather. Sow the seed as early in February as the condition of the soil will permit, in drills eighteen inches apart, covering about one inch of fine soil over the seeds. Thin the plant when fit, leaving them six inches apart, and keep the soil stirred and free from weeds.

	Per Ounce—s	d
Elcombe's Improved , handsome roots, of splendid quality -	0	4
Hollow=Crowned , a fine selection of this variety -	-	0 2

	Per Ounce—s	d
Lisbonnais , a very handsome variety ; quite distinct -	-	0 6
Sutton's Student , handsome shape, excellent flavour -	-	0 4

MELON.

THE culture of Melons in hot-bed frames is by no means beyond the capabilities of amateurs, assuming that they have mastered the details how to construct a hot-bed. Sow the seeds singly in small pots three parts filled with light loamy soil, covering lightly with some of the same mould, and plunge in the hot-bed, covering the pots with glass. This however, should be removed as soon as the young plants appear, and when they have made two inches of growth top-dress with soil which had been previously in the frame for twenty-four hours to become slightly warmed, taking care not to damage the stems of the plants, as they are very easily injured by the slightest pressure of the hand at this stage of their growth. When the plants have made three rough leaves plant them on a ridge along the centre of the bed about fifteen inches wide and nine inches deep, the surface of the ridge being nine inches from the glass. Set two plants at nine inches apart on the ridge in each light, being careful not to bury the stems any deeper in the ridge than they were in the pots, and make the soil firm about the roots. Then give a little lukewarm water through a rose to settle the soil, and shade the plants from sun for a few days until the roots have taken to the soil, when it may be discontinued. As the roots push through the sides of the ridge add a couple of inches thick of soil, and continue to make such additions until the space between the ridge and frame is filled.

When the plants have made fresh growth pinch out the points to cause them to branch. Three of the shoots resulting from this stopping should be trained thinly over the surface of the bed, and when these have made about fifteen inches of growth they also must be stopped, which will result in fruit bearing laterals being produced, in their turn to be stopped at one joint beyond the fruit. Keep all other shoots that may afterwards appear pinched out. When the blossoms first open fertilize them, until sufficient fruits for a crop are secured. Four fruits will be enough for each plant to ripen, and these should be about the same size, and distributed pretty regularly over the individual plants. When the plants are in flower, and again when the fruit is approaching maturity, water should not be distributed over the leaves or bed, and air must be admitted more freely than hitherto until the fruit is set. Then close the frame early enough in the afternoon to raise the temperature to 80° or 90° with sun heat, damping the foliage at the same time. Very little water need be given at the roots after the latter have pushed well into the bed of fermenting manure beneath. Provide a night temperature of 65°

to 70°. This may be secured by making up the linings every fortnight, removing the spent materials, and supplying hot dung and leaves, covering the glass with mats and fern. Admit a little air in the morning when the thermometer reaches 75°, increasing the amount given when a temperature of 80° is indicated, adding thereto when the glass registers 85°. If the above details are carried out in an intelligent manner there need be no doubt about success in the first attempt to grow Melons. If two or three frames are to be devoted to them sow seed at intervals.

Lilburn Favourite Melon, grown by Mr Lovett, Lilburn Tower Gardens (A. B. Collingwood, Esq.).

Lilburn Favourite (new).—This is undoubtedly one of the most deliciously flavoured melons it has ever been our privilege to offer. It belongs to the green flesh section, and possesses every desirable quality of an ideal melon. It attains an average weight of about 3 lbs., the fruit presenting a most attractive appearance, with beautifully netted skin. The rind is thin, and the melon when cut displays the flesh right up to the rind, and retaining throughout its full, rich flavour. It is a free setter, and of robust habit. A meritorious acquisition. Per packet, 1/6 and 2s 6d.

ONION.

HOW TO GROW EXHIBITION ONIONS.

DURING the last few years very great strides have been made in the production of exhibition Onions, which now form one of the attractions at our vegetable shows during autumn and winter. No exhibitor will stand much chance of winning unless he can put up large, handsome, well-ripened bulbs. In endeavouring to produce fine exhibition bulbs the conditions to be secured are a very rich, deeply-trenched, and heavily-manured soil, sowing the seed early in the year under glass, and giving the plants every encouragement before and after planting out. On all kinds of light soils the trenching is best done in autumn, and no attempt should be made to break up the soil, but leave it in as rough a state as possible, and apply a good coating of soot and lime as soon as finished. Too much manure can hardly be applied, and nothing is better than well-rotted farm-yard dung. Sow the seed in boxes of light rich soil about the middle of January, placing them in a greenhouse or warm pit, even a cottage window or home-made cold frame will do. As soon as the young plants are above the soil, and can be handled, no time should be lost in pricking these out into other boxes, taking care that they receive no check from a chill. A cold frame should finish and harden off the plants prior to planting in their final quarters about the second or third week of April. The young plants must be carefully lifted with a trowel, disturbing the roots as little as possible, and pressed firmly in the prepared beds, giving water if the weather is dry. When the plants are fairly started into growth the surface must be frequently stirred, after which a good mulch of sifted stable manure must be laid on to the depth of two inches. Water freely in dry weather, and dust some artificial manure between the rows every ten days. If all goes well, it may safely be said that no crop grown in the kitchen garden will give more pleasure during the season than the Onion bed. Before finally lifting the most promising bulbs should be partially lifted with a small hand fork, which will help to ripen and prevent splitting should wet weather set in. In finishing off the ripening it is absolutely essential that they should be kept dry. The bulbs should be turned daily, so that every part becomes exposed.

	Per Ounce—s	d
Ailsa Craig , the grandest exhibition variety in cultivation. The bulbs attain to an enormous size; specimens under the best treatment often reaching over three pounds weight each. In the trial of onions at Chiswick, 1898, the variety is described as "very large, deep globe shape, skin dark brown, firm, and heavy; very good for both autumn and spring sowings." Per Packet, 6d, 1s and 2s 6d.		
Banbury Cross , a splendid exhibition variety, of perfect form. Bulbs large, flattish, globe-shaped; skin lemon brown; very firm and heavy; excellent keeper	-	1 0
Bedfordshire Champion , <i>true, and very select</i> , a firm and heavy long-keeping variety, of medium size, globe shape, deep brown skin; a fine onion for main crop	-	0 9
Blood Red , large flat round, skin deep purple	-	0 6
Brown Spanish or Brown Portugal , a well-known favourite	-	0 4
Cranstons' Excelsior , <i>very select</i> , large, globe shape, skin dark brown; firm and heavy; excellent either for autumn or spring sowing	-	1 6
Danvers' Yellow , medium size, flattish globe, skin bronzy brown; a quick-growing variety, keeping well	-	0 6
Giant Lemon Rocca , large, deep globe shape, skin lemon brown; very good for autumn sowing	-	0 8
Giant Zittau , large globe shaped, skin bronzy brown; firm and heavy; very good for spring sowing	-	0 6

	Per Ounce—s	d
Golden Ball , large, globe shape, skin deep golden brown, good keeper; good for spring or autumn sowing	-	1 0
James' Keeping , splendid cropper, attains a good size, and possesses grand keeping qualities	-	0 6
Nuneham Park (<i>true</i>), specially fine and superior stock	-	0 10
Rousham Park Hero , large flattish globe shape, skin pale brown, one of the best onions for spring sowing	-	0 10
Silver-skinned Pickling (<i>The Queen</i>), small flat round, skin silvery white; very good for pickling when spring sown, and not thinned out	-	0 8
The Wroxtton , very large, deep globe shape, skin brown; excellent for spring or autumn sowing; grand keeper	-	1 0
Trebons , <i>true, scarce</i> , very large, fine deep globe shape, skin pale golden brown; an excellent, firm, and heavy variety; first-class for autumn sowing, and a grand keeper	-	1 0
Tripoli, Giant Red Bassano , large flat round, skin pale purple; one of the best for autumn sowing	-	0 8
„ Mammoth White , very large flat round, skin silvery white; ripens early; best for spring sowing	-	1 0
White Lisbon , hardy early onion for drawing young for use in spring	-	0 3
Finest Mixed Onion , our own special mixture of the best varieties for spring sowing, described above	-	0 6
Mixed Onion , good sorts for general use	-	0 4

**ONION PLANTS—AILSA CRAIG, TREBONS, and CRANSTON'S EXCELSIOR—
Autumn Sown, for Spring Planting. 1s per 100, post free.**

RADISH.

THE soil for Radish should be a light, moderately fertile loam, always open, except for early and late crops, which should be warm and sheltered. Sow for early use in frames during January and February, and in the open ground every fortnight during the summer. Thin out the plants to two or three inches apart, water in dry weather, and protect early or late crops from frost with straw or mats.

	Per Ounce—s	d
Turnip-shaped, Early Scarlet Forcing , quick growing, deep scarlet colour; very short leaves and crisp flesh	-	0 6
„ Red , quick in growth, and stands the heat well	-	0 3
„ White , fine colour and mild flavour	-	0 3
Olive-shaped Scarlet , very mild and crisp	-	0 4
„ White , early, and very delicate flavour	-	0 4

	Per Ounce—s	d
Olive-shaped, Golden Yellow , very attractive; early, and fine for summer use	-	0 6
„ French Breakfast , scarlet, tipped white; very early and fine	-	0 4
Long-shaped, Short Scarlet Top , very early, and crisp, mild flavour	-	0 3
Wood's Frame , best for forcing and early use	-	0 4
China Rose , the best winter variety; sow early in August	-	0 6

RHUBARB.

SOW in March in drills 18 inches apart, two inches deep, in light rich soil, and transplant the following spring, in deeply trenched and heavily manured ground in rows three-and-a-half feet apart, and the same distance in the row. Plantations of this useful vegetable are, however, better made from divisions of the roots, and planting with the buds a couple of inches under the surface. Seeds of all the leading varieties. Per pkt., 6d. (For Roots, Culinary Plants, see page 18.)

SALSAFY AND SCORZONERA.

SOW during the month of April, in drills, and thin out when large enough to six to nine inches apart.

SAVOY.

SOIL the same as for common Cabbage suits the Savoy. Sow large late sorts, as the *Drumhead*, about the second week of August to plant in spring. Early varieties do best when sown in March or early part of April for planting in June. Plant in rows eighteen to twenty-four inches apart, according to the kind to be planted; water abundantly in dry weather, and stir the surface of the soil frequently.

			Per Ounce—s	d				Per Ounce—s	d

Extra Early Midsummer , a very dwarf and early variety, with small solid hearts; the finest for spring sowing	-	-	-	0	8						

SEA KALE.

A MOST excellent spring vegetable, always used in a forced or blanched condition, growing best in an open, free, warm, soil, and is partial to a dressing of saline matter. The seed should be sown early in April, thinned out to six inches apart, and lifted the following spring; cut up into pieces about four inches long, and re-planted in groups of three to five pieces at a distance of two feet apart each way. After another season's growth they will be fit for forcing. For early forcing lift and pot the roots in batches as required, placing three or four in a ten-inch pot, and placing the pots on hot water pipes or plunge in hot-bed, cover the crowns with an inverted pot to exclude the light, when the Kale will be fit to cut in three weeks. For forcing in open air the crowns must be covered with large pots, tiles, or boxes, and surrounded with hot dung.

SHALLOTS (EXHIBITION).

WE make a specialty of this Vegetable, having been the first to introduce the above named variety. Shallots are one of the most useful of all the Onion tribe, doing well and yielding a large crop, either green or dried, on any poor hard ground, such as would not grow Onions. They are troubled with no grub, are ready early, and keep quite sound up till April. They may be planted any time in February and March, and lifted ripe in August.

Mein's Exhibition Shallots.—Skin deep red; bulb very large and solid; heavy cropper. First Class Certificate, Vegetable Conference, Chiswick, 1891. Per lb., 1s.

SPINACH.

THIS is often much in demand, and to secure a constant supply it should be sown frequently during the summer and autumn. For the summer crop an open situation with a rich, moist loam is best; but for winter crop a light, moderately-fertile, and dry border is preferable. Sow for summer use the *Round-leaved* every two or three weeks from March up till June. Early in August, and again about the end of the month, put in a good quantity of the *Prickly* sort, which will keep up a supply till spring. The *New Zealand* is a very superior variety, and deserving of more extensive cultivation. It resists the severest drought, and a few plants will be sufficient to yield a constant supply throughout the season. Sow in a gentle heat, and harden off in pots, planting out in little knolls about the end of May.

				Per Ounce—s	d					Per Ounce—s	d

TOMATO.

FOR producing fruit under glass from July to December, the seed should be sown early in March, and placed in gentle heat to germinate. When in rough leaf the seedlings should be placed near the glass, and also thinned if need be, the aim being to keep them as sturdy as possible. Pot them off first in 5-inch size, using light loamy soil, and sinking the plants up to the seed leaves. To obviate the difficulty of encountering a too vigorous top-growth, the plants should be re-potted into 12-inch size, and these set on the borders of the house close to the glass, where the roots can spread into the soil beneath. A compost of turfy loam and old hot-bed manure answers well, and the pots should only be about three-parts filled, this allowing space for a good top-dressing of rich compost when the first clusters of fruit are set. Each plant should be trained to a single stem, these to be carried upon the roof on a trellis near the glass, all side shoots to be rubbed off as fast as they form, the lead only being unstopped until at least three or four bunches of fruit are set. With many it is found a difficult matter to obtain a good set, especially in the early part of the season. When, however, the plants receive abundance of room, sunshine, and air, plenty of pollen is formed, and this being dry before mid-day, may be distributed by smartly tapping the stems or trellis, or the syringe may be employed for a similar purpose. Most varieties are apt to form one very large fasciated bloom; this, when reserved, taking the lead and much weakening the rest of the flowers that not unfrequently fall prematurely. It is unwise to leave these deformed flowers on the plant, as large and handsome, and not rough deformed, fruit are required. Two or three fruits in one cluster are usually ample, and early thinning should be resorted to.

	Per Packet—s.	d.
Champion , deep scarlet, round, smooth, and very solid; compact habit and heavy cropper	-	o 6
Early Chemin , a fine new variety of marvellous productiveness, bunches of ten to fifteen fruits having often been obtained; resembles <i>Perfection</i> in shape and colour	-	o 6
Frogmore Prolific , a splendid cropping variety, bearing large clusters of medium-sized heavy fruit of rich colour and fine flavour	-	1 o

Ham Green Favourite , heavy cropper, large fine shaped fruit of rich scarlet	-	o 6
Mikado , fruit very large, of deep scarlet colour; very prolific and hardy	-	o 6
Perfection , the handsomest and best of all Tomatoes: fruit a pleasing full red colour: very large, solid, and smooth outline; excellent flavour	-	o 6
Up to Date , a free-setting and heavy-cropping variety, of medium size, deep red colour, and perfect form	-	o 6
Very Early Dwarf Red , fruit medium sized, bright red, deeply ribbed; useful for open-air culture	-	o 3

TURNIP.

A COMMON vegetable, for which we have no good substitute in culinary art, and of which a continuous supply is always looked for.

The *Extra Early Milan* will produce nice juicy bulbs in about six weeks from the time of sowing. Seeing that turnips are not improved either in quality or appearance if left in the ground long before they are shown or used, it is advisable to make frequent sowings, and, in order to encourage the desirable rapid growth, it is a good plan to sow in the drills with the seed a little artificial manure. The Dutch hoe should also be freely used between the rows, and the thinning should be done before the plants overgrow each other. All this tends to encourage rapid growth, and, good space being allowed, the development will be equally satisfactory.

Summer Varieties.

TURNIP:—Mein's Early Market.—One of the earliest of turnips—beautiful white solid flesh, pleasant to the taste, and medium sized roots. Per Packet, 6d and 1s.

	Per ounce—s.	d.
Extra Early Purple Milan , purple top, very early, sweet and crisp, the best for forcing and early borders	-	o 6
Early White Dutch , fine early turnip of flat shape; must be used in a young state	-	o 3
Early White Milan , a pure white skinned variety of this excellent first early turnip	-	o 6

	Per Ounce—s.	d.
Early White Stone , fine shapely root, very early	-	o 3
Model White , beautiful round pure white, with thin skin; sweet and juicy; splendid for exhibition. Per Packet, 3d.	-	
Snowball , very early round white variety; best for successional sowings	-	o 3
Veitch's Red Globe , an excellent variety, good flesh	-	o 3

Autumn Varieties.

Winter Varieties.

Chirk Castle Blackstone , dark brown skin; very hardy and juicy	-	o 4
--	---	-----

Laing's Dwarf Top Swede , fine shape and tender skin; the best swede for winter use	-	o 3
--	---	-----

VEGETABLE MARROW.

WHEN well grown and used in a young state marrows furnish a very wholesome vegetable, and are in demand with most families. Associated with them, and requiring the same treatment, are Gourds or Squashes. Seed should be sown in gentle heat early in March, and the plants grown on in pots and planted out on hillocks of richly-manured soil the first week of June.

	Per Packet—s.	d.
Long White , the best and most prolific of all Marrows; fruits well both early and late	-	3d and o 6
Long Green , skin deep green striped; flesh very tender and juicy; preferred by some to the white sorts	-	3d and o 6

	Per Packet—s.	d.
Moore's Cream , half-round shape, creamy-yellow colour; flesh very thick and tender, excellent flavour	-	o 6
Pen-y-Byd , fruit almost round, creamy-white colour; flesh thick and firm; delicate flavour	-	6d and 1 o

GOURDS.

	Per Packet—s.	d.
Hubbard , small size; very prolific and fine flavour	-	o 6
Mammoth , deep yellow smooth skin; grows to the enormous weight of fifty to sixty pounds	-	1 o

	Per Packet—s.	d.
Warted Marrow , flattish round with thick warted skin; excellent for "squash pie" or jam	-	o 6

POTATOES.

FINDLAY'S "NORTHERN STAR"

NEW DISEASE-RESISTING LATE WHITE POTATO.

➡ **Plant best Scotch-grown Seed Potatoes to secure best results.**

Our own
Scotch-
grown,
from Stock,
purchased
direct from
the raiser,
Mr Findlay.

The most
disease-
resisting,
weather-
defying,
and
profitable
Potato ever
sent out.

"NORTHERN STAR POTATO."

It crops well.

Keeps well.

Cooks well.

NEVER within living memory has there been such stir in the potato world as that caused by the advent of the "Northern Star," nor has any of this humble race of vegetables ever attained to such notoriety. The cropping powers of this variety are almost incredible, and we annex a few particulars of what it is capable of doing, and our own results have fully corroborated what others say of it. The past excessive wet season has again brought prominently home to potato growers the great necessity of planting strong-constituted, disease-resisting Potatoes, and the extraordinary results obtained by growers throughout the country justify us in recommending all growers to plant some of the "Northern Star." It is also now being widely acknowledged and appreciated that it is of decided benefit to plant Hardy Scotch-grown Seed Potatoes to secure the best results.

What Mr FINDLAY says of "Northern Star:"—

"In my career as a raiser of new varieties of Potatoes, I think it will be generally conceded that I have introduced a few that have made a reputation. But of all that I have sent out no one so nearly approaches my ideal Potato as this, and that I have judged it fairly is, I think, borne out by its reception by growers generally, the high place it has attained in their estimation, the phenomenal demand, and the high level of prices paid for seed in the spring of this year (1903). I offered it in August, 1902, at 5s per lb. The demand was such that I was obliged to raise my price from time to time, and finished at 20s per lb. The buyers were chiefly those who had tried it in 1902. It is a heavy cropper, of fine quality, and the most disease-resisting and weather-defying Potato I have ever known."

ITS CROPPING POWERS.

Our own growing:—Every lb. of "Northern Star" Potatoes produced on an average fully 130 lbs.
A Correspondent writes:—From 1 lb. "Northern Star" I had 135 lbs., what a wonderful Potato this is.
Another writes:—From 1 lb. of "Northern Star" I got 72 lbs. of fine tubers.
Another writes:—From 2 lbs. of "Northern Star" I have got 3 cwt.
Another writes:—From 1 lb. "Northern Star" I have 50 lbs.
Another writes:—From 2 lbs. "Northern Star" I had over 90 lbs.

Another writes:—From 2 lbs. "Northern Star" I have obtained nearly 5 cwt.
Another writes:—What an extraordinary grand potato is "Northern Star." From the 14 lbs. I got from you we have lifted fully 13 cwt.
Numerous correspondents, writing in the press, bear similar testimony. One in particular, Mr J. Sherlock, writing in the *Gardeners' Chronicle* of 3rd October, 1903, says that from 2 lbs. of "Northern Star" he lifted 420 lbs.

SCOTCH SEED POTATOES.

THE most suitable soil for this, the most important of all vegetables, is a deep friable loam ; but as few growers are able to exercise any choice in the selection of soils, it is necessary to treat what they have well by deep cultivation and judicious manuring. In the garden the manure can be dug in and the potato be planted as the digging proceeds, or the planting may be deferred until the surface has become moderately dry. In the selection of sets for the production of crops for the table whole tubers of medium size are in some respects preferable, while for the production of exhibition tubers cut sets, having two or three eyes each, are considered the best. Perfectly sound tubers should in all cases be selected, and it will be an advantage if they have been spread out thinly some time previously in a shed or outhouse to promote the production of hard purple sprouts. On ordinary soils the early varieties should be planted nine inches apart in rows, with fifteen-inch spaces between them. Moderate growers should be allowed twenty-four inches from row to row and twelve inches in the rows, and the robust growing kinds should be thirty inches from row to row, and twelve inches apart in the rows. On rich soils the early sorts should have an additional three inches between the rows, and the spaces between the rows of the moderate and strong growing varieties should be increased by about six inches. The most suitable period for planting is from the end of February to the end of April, but on well-drained soils that can be readily worked early in the spring, the first fortnight in March is the best time for planting, and in all cases the work should be completed as soon after the middle of the month as the weather and conditions of the soil will permit. After the shaws make their appearance the intervening spaces should be kept well stirred until the growth is so far advanced as to necessitate earthing up. The earthing up must be done before the growth is so far advanced as to incur the risk of the shaws being injured. To lift the crop in dry weather is an advantage, and it will be well to bear in mind that although it is advisable to allow the crop intended for winter and spring use to remain in the ground until it is fully matured, when it can be done with safety, potatoes may as soon as they have attained their full size be lifted with the full assurance of their keeping satisfactorily.

Earliest Varieties.

	Per 14 lb.—s	d
Ashleaf, Myatt's Prolific , heavy cropper of excellent flavour ; first class for early border and marketing -	2	6
Ashleaf, Lemon Kidney , a very early dwarf-top variety of the truly old-fashioned flavour, fine for frames or early border -	3	0
Britannia , first early. Good for frames, producing a crop at Christmas, and during the early months of the year -	2	6
Duke of York produces very handsome oval-shaped tubers, flesh tinted yellow ; great cropper and fine flavour -	2	6
Beauty of Hebron , very early, heavy cropper and excellent quality -	2	6
Early Puritan , one of the earliest pure white round potatoes in cultivation ; very heavy cropper, and of the highest value for marketing, the tubers being large and handsome -	2	6
New Seedling , a first early round of exceptionally fine quality ; an extra good cropper, and one which we feel sure will win its way among early potato growers -	5	0

	Per 14 lb.—s	d
Royal Kidney , splendid early variety, does well on all soils ; a real farmer's potato. Its table qualities are of the best, being firm, dry, and of fine flavour. A disease-resister, and heavy cropper -	4	0
Sharpe's Victor , the earliest and best forcing kidney ; tubers fairly large and handsome, flesh yellow, of good flavour, and crops well ; very dwarf tops, ripening off quickly -	3	0
Sir John Lewellyn (new). <i>Award of Merit Royal Horticultural Society</i> . A splendid sort, producing very early heavy crops of large tubers ; in great demand -	5	0
Sutton's Harbinger , a very early round variety, with rough skin and shallow eyes ; flesh white, and of excellent quality, -	3	0
Sutton's Ringleader , a first early kidney, with white flesh tubers fit to use when quite small ; it is of excellent quality, very prolific, and a good keeper ; dwarf erect tops -	3	0

Second Early Varieties.

Abundance , a very heavy cropper, of fine form and quality ; tubers flattish oval, eyes shallow, skin rough, flesh white and dry -	2	0
Best of All , a flattish round variety of exceptionally fine quality, grand cropper and keeps well -	2	6
British Queen , a round white of exceptional quality ; enormous cropper, and keeps well -	0	
Cigarette , an excellent second early variety, of splendid quality ; strongly recommended -	2	6
Conquest , grand white round sort, of finest quality, and a grand cropper ; very suitable for early market growers -	2	0
Congress , a shapely round white of fine quality, and a good cropper -	2	6
Cramond Blossom , second early round ; a strong grower of splendid quality and flavour ; a beautiful shape, and has shallow eyes -	2	0
Duke of Albany , a splendid second early white potato of excellent quality, even when only half grown ; flesh white and dry ; robust habit, and fine for market -	2	6
Evergood , a new second early variety of surpassing excellence for field or garden culture. Sure to be in great demand, as all who have tried it are convinced of its good qualities. Tubers finely formed ; eyes few and shallow ; heavy cropper with short haulms ; recommended -	2	6

Early Gem , a grand cropper of superb quality for table or exhibition ; a good keeper -	2	6
Early Sunrise , a grand second early, oval shaped, pink skin, grand table sort, and heavy cropper -	2	6
English Beauty (new), a remarkably fine variety, and one that is certain to become a favourite for the table. It does well on most soils, has a dwarf top, with large, roundish tubers, and is specially recommended for early planting and forcing, coming to maturity in ten weeks from time of planting -	3	0
General Roberts , large white oval, immense cropper, quality all that can be desired, can be recommended with the utmost confidence ; a heavy cropper -	3	0
King Edward VII. (new). Early maincrop variety of undoubted merit ; one of greatest yielders and disease-resisters ; tubers oblong, skin white, slight touch of pink round the eye ; a remarkably strong grower, and grand keeper -	4	0
Peach Blossom , shapely tubers of fine form and quality, heavy cropper and good keeper -	2	6
Pink Perfection , good cropping sort of shapely coloured tubers, and of fine quality -	2	6
Princess Alice , a handsome, shapely tuber, very fine quality -	2	6
Regent (Sutton's Early), well known sort, of excellent cropping, cooking, and keeping qualities -	2	6
Snowdrop , a beautiful white-fleshed kidney of the most delightful flavour ; heavy cropper, and grand keeper -	2	6

POTATOES—Continued.

Main-Crop and Late Varieties.

	Per 14 Lb.—s	d		Per 14 Lb.—s	d
Clark's Main Crop , a fine main-crop variety for garden or field purposes; tubers long and even shaped; growth compact; splendid flavour; grand keeper -	-	1 6	Scottish Triumph , a main-crop variety, large tubers of an oblong flattish shape, clear white skin and shallow eyes; flesh beautiful white and of excellent quality; heavy cropper	1	6
Daniel's Special , a favourite Maincrop variety; is much grown both for table and exhibition, producing heavy crops of beautiful elongated tubers of finest quality -	-	2 6	The Dean , a very distinct variety with large and finely-formed round tubers of deep purple colour; capital exhibition variety, telling well in a collection -	-	2 6
Garton , a first-class main-crop variety, enormous cropper, good quality, specially recommended as a disease resister	1	6	Up-to-Date , an enormous cropper; large tubers of handsome form, with few and shallow eyes; flesh white, and of capital cooking quality -	-	1 6
Goldfinder , a most handsome white skinned main-crop variety, very productive, and of robust habit; tubers round or pebble-shaped, flesh white, fine grained, and of unsurpassed quality when cooked -	-	2 0	Webb's Progress , of very strong, vigorous growth, exceedingly prolific, and most valuable for either table or exhibition; tubers oval-shaped, of large size, and the flavour of its white mealy flesh is all that can be desired -	-	2 6
Reading Russet , a superb exhibition round pink-coloured potato with russety skin, grand form, and shallow eyes; good cropper, keeps and cooks well -	-	2 6	Webb's Motor , this splendid potato is a grand acquisition for field or market gardens where a heavy yield is required; the tubers are kidney shaped, white, of large size, and beautiful cooking quality -	-	2 6
Satisfaction (Sutton's) , one of the finest exhibition varieties; tubers large, flat, or pebble-shaped, white netted skin, flesh white, and first-rate quality -	-	2 6			

And many other Varieties.

Should we happen to be sold out of any particular variety during the season, unless instructed otherwise, we shall send the nearest we have of the same class instead.

SWEET AND POT HERBS.

CULTURE.—Cultivate in rich open soil. Sow in April and May, covering the smaller seeds very lightly. Some judgment should be exercised in gathering herbs to preserve in a dry state. They should be cut when not quite in bloom, and on a dry day. Dry them quickly out of the sun, and when dry pack close in dry boxes, &c., excluding the air as much as possible. Per Packet, 3d and 6d.

h b, Hardy Biennial; h a, Hardy Annual; h h a, Half-hardy Annual; h p, Hardy Perennial.

Angelica, h b, stalks and flowers used in confectionery.

Anise, h a, leaves used for seasoning.

Balm, h p, an aromatic plant.

Basil, Bush, } h h a, for flavouring soups.

" Sweet, }
Borage, h a, used in salads and for claret cup, good for bees.

Caraway, h b, seeds used in confectionery.

Dill, h b, leaves used in pickles and sauces.

Fennel, Sweet, h p, for garnishing and fish sauce.

Horehound, h p, for the cure of asthma.

Hyssop, h p, leaves and shoots used for pot herbs, also medicinally.

Lavender, h p, grown for its sweet-scented flowers.

Marigold, Pot, h a, flowers used in soups.

Marjoram, Sweet or Knotted, } h b, used in soups and stuffings, also, when dry, for winter use.

" Pot or Perennial, }
Purslane, Green, } h a, shoots used for salads.

" Golden, } Rampion h a, used for salads.

Rosemary, sprigs for garnishing; leaves for making a drink to relieve a headache.

Rue, for garnishing, also useful for poultry.

Sage, h a, for stuffing and sauce.

Savory, Summer, } h a, for seasoning, also useful in dry state

" Winter, } for winter.

Tarragon, h p, for salads and soups. Per Packet, 1s.

Thyme, h p, for soups and seasoning, also stuffing.

Wormwood, h p, used as a tonic when taken in tea.

FLOWER SEEDS.

ASTERS.

HALF-HARDY bedding annuals, producing for a long period a magnificent display of large brilliant flowers. Successional sowings may be had from the middle of March till the end of April, in gentle heat for the earliest and in a cold frame for the latest sowing. As soon as the plants are large enough, prick out into a cold frame filled with any light rich soil close up to the glass. The plants should stand about three inches apart each way, and must be shaded for a day or two, and watered with a fine rose. Give air freely in mild weather, and keep them growing steadily, when by the end of May they will be in fine condition for planting out, which operation should be performed in mild and cloudy weather. In order to produce really fine blooms the ground into which the plants are put must be well and deeply dug, and a plentiful supply of manure incorporated with the surface soil. The dwarf kinds may be planted nine inches apart each way, but for the tall exhibition varieties fifteen or eighteen inches is not too much, if room can be spared. Frequent waterings and mulchings in dry weather must be done during the period of growth, and an occasional syringing with soft soap and water if spider or greenfly attack the crown.

For Exhibition, the *Victoria*, *Globe Quilled*, and *Giant Comet*, are best. Thin the blooms as soon as they appear, leaving only the centre and four side shoots with one bloom to each. Stimulate the plants with liquid manure when the flowers are expanding, and shade those wanted for staging.

Chrysanthemum-flowered, the finest dwarf Aster for bedding, the plants being of equal height and the brightly-coloured large flowers borne on stiff upright stems. Height 10 inches.

	Per Packet—s	d
1 Collection of 12 separate colours - - - - -	2	6
2 " " 6 " " " - - - - -	1	6
3 Finest Mixed - " - " - - - - -	6d and	1 0

Christmas Tree (*new*) a new introduction of branching habit, profuse flowerer; very useful for cutting; height 20 inches.

40 Imperial Dwarf , blue. 9 inches - - - - -	3d and	0 6
41 " " white. 9 inches - - - - -	3d and	0 6

Agrostis.

Hardy Annual ornamental grasses of graceful tufted habit; splendid for bouquets.

42	Nebulosa , 1½ feet	-	-	-	-	-	Per Packet—s	d
43	Pulchella , 6 inches	-	-	-	-	-	-	o 3
								o 2

Alonsoa.

Half-hardy annuals with showy bright scarlet flowers; fine for pot culture in conservatory.

44	Warszewiczii Compacta , crimson scarlet, 1½ feet,	-	-	-	-	-	Per Packet—s	d
							-	o 3

Alyssum.

45	Maritimum , (Sweet Alyssum), pretty hardy annual for edgings; flowers white and sweetly scented. 9 inches	-	-	-	-	-	o	2
46	Saxatile Compactum , a hardy perennial variety, flowering in spring; yellow. 6 inches	-	-	-	-	-	o	3

Amaranthus.

Half-hardy annuals with striking and beautiful foliage; splendid for sub-tropical bedding or conservatory decoration.

47	Henderii Hybrids , finest mixed. 3 feet	-	-	-	-	-	Per Packet—s	d
48	Melancholicus ruber , rich red foliage. 1 foot	-	-	-	-	-	-	o 6
49	Salicifolius , bright orange red. 3 feet	-	-	-	-	-	-	o 3
50	Tricolor Splendens , scarlet, yellow, and green. 1½ feet	-	-	-	-	-	-	o 6

Ammobium.

51	Alatum grandiflorum .—Half-hardy <i>White Everlasting</i> annual, useful for mixing with other kinds, or with grasses for decorative purposes in the winter season. A sandy soil not too rich in manure will suit it best. Height 2 feet	-	-	-	-	-	o	3
----	---	---	---	---	---	---	---	---

Anagallis.

52	Grandiflora , choice mixed, very free flowering and showy half-hardy annuals of dwarf habit, succeeding best in somewhat dry situations with all the sunshine possible; should be sown where the plants are to grow; the margin of rockwork would be a suitable place. Height 6 inches.	-	-	-	-	-	o	3
----	--	---	---	---	---	---	---	---

Anemone.

Hardy perennial tuberous-rooted plants, flowering in early spring, and of great value for cutting. Sow in April, and transplant when ready into well-manured ground in sheltered open position.

53	Coronaria , finest mixed. 6 inches	-	-	-	-	-	Per Packet—s	d
54	St. Brigid , early flowering strain, coming into bloom in September	-	-	-	-	-	-	o 3
55	Fulgens , deep crimson-scarlet, black centre. 6 inch	-	-	-	-	-	-	o 6

Antirrhinum.

Hardy perennials, flowering the same season if sown early in March and planted out in warm sunny position about end of May. The Antirrhinum is unsurpassed as a bedding plant, being free and continuous in flowering, and the colours are very rich and varied.

56	Mein's Prize Strain , saved by ourselves from finely-striped bold flowers of all colours. In pricking off the seedlings of this strain care should be taken to save all those with mottled or striped leaves, as this indicates a like colouring in the flowers. 1½ feet	-	-	-	-	-	Per Packet—s	d

73	Græca , rich purple	-	-	-	-	-	Per Packet—s	d
74	Leichtlinii , rosy carmine	-	-	-	-	-	-	o 6
							-	o 6

Auricula.

Hardy perennial old-fashioned border flowers, delightfully scented. Sow in cold frame in March, and plant out in June to get strong plants for flowering the following season.

75	Alpine , saved from name varieties	-	-	-	-	-	Per Packet—s	d
							-	o 6

Balsam.

These old-fashioned half-hardy annuals are so easily grown that it is a wonder more are not to be seen in gardens. The one mistake that is frequently made is in sowing the seed too early in the spring, and in too much warmth. Sown later, say towards the end of April, better plants are secured with sturdier growth. Overcrowding should be avoided, light and air being also essential.

76	Camellia-flowered Extra Choice Prize Strain; flowers of extraordinary size, perfect form, and brilliant chaste colours; splendid for exhibition. Finest Mixed	-	-	-	-	-	Per Packet—s	d
							-	o 6

Bartonia.

77	Aurea , showy yellow-flowered hardy annual. 1½ feet,	-	-	-	-	-	o	2

							-	o 3

BEGONIA.

THE magnificent class of tuberous-rooted Begonias has sprung into existence within a comparatively recent period, and great improvement in the habit of the plant and size of the flowers continues to be made every year. In February sow the seeds in shallow pans of light sandy soil, well drained and moistened previously. Place on a shelf in the greenhouse, and cover with a piece of glass, darkened until the plants appear, after which expose gradually to the light. Pot off singly in small pots, using equal parts turfy loam, leafy mould, and sand. Those to be flowered inside should have regular shifts into larger pots, and encouraged to grow freely, when they will give a grand display all through the summer and autumn months. Those intended for bedding outside should be started in 4-inch pots, gradually hardened off, and finally planted out about the end of May. As a summer bedding plant the Begonia has become a formidable rival to the Geranium.

	PER PACKET—s	d
83 Begonia, International Prize Single , saved only from the best selected blooms of new French and English varieties, of superior size and form of flowers	1s 6d and	2 6
84 International Prize Double , saved from the finest collection of named varieties, and hybridized, so that the produce is sure to give some new varieties of surpassing excellence	1s 6d and	2 6

Fibrous Rooted.

	Per Packet—s	d

86 " white	1s and	2 6
87 Carmine , bedder	1s and	2 6
88 Crimson , do., bronze foliage	1s and	2 6
89 Zulu King , bright red flowers, foliage almost black	2	6

FOR BEGONIA TUBERS SEE NURSERY PORTION.

CALCEOLARIA.

THIS may be considered one of the most showy of greenhouse plants; its noble trusses of large and beautifully-marked blooms, and the unexacting nature of its requirements, render it a favourite plant with amateurs. The best time to sow is from midsummer to the end of July, and the pots should be placed in a cold frame, for the Calceolaria is nearly hardy, and only requires protection from severe frost. During the late autumn and winter months they grow very rapidly, and must be potted on as they require it; the largest plants will flower in 8 or 9-inch pots. There are no plants more liable to be attacked by green-fly, and constant attention is required to keep them clean; manure water should be given to them when coming into flower, and they should occupy a sunny position in the greenhouse.

	Per Packet—s	d
90 Herbaceous, Extra Choice Prize Strain , habit dwarf and robust, carrying immense trusses of splendid flowers, which, for size, shape, and markings, may be said to be perfection. Finest Mixed.	1/6 and	2 6

	Per Packet—s	d
91 New Perennial Hybrids : this new strain combines the beautiful colours of the greenhouse varieties, with the hardiness of the bedding varieties. If sown in July they may be bedded out to flower the following season. Finest Mixed.	1/6 and	2 6

Briza.

Hardy annual quaking grasses; very pretty for bouquets.

	Per Packet—s	d
92 Gracilis , slender quaking grass. 1 foot	-	0 2
93 Maxima , large panicles. 1 foot	-	0 2

Browallia.

Very pretty and free flowering half-hardy annuals, growing about 18 inches in height, with Verbena-like flowers; exceedingly useful as pot plants for the conservatory during July, August, and September. Should be sown in heat and gradually hardened off to a greenhouse treatment.

	Per Packet—s	d
94 Elata grandiflora . Rich bright blue	-	0 6
95 " alba . A pure white-flowering variety	-	0 6

Cacalia.

	Per Packet—s	d
96 Coccinea (Tassel Flower)—A distinct free-flowering hardy annual, with orange-scarlet flowers, produced in trusses. Height 1 foot	-	0 3

Calandrinia.

An interesting class of plants requiring sunshine and a dry position to insure freedom of flowering.

	Per Packet—s	d
97 Grandiflora .—Fleshy-leaved hardy annual with medium sized rose-coloured flowers. Height 18 inches	-	0 3
98 Umbellata .—Half-hardy perennial with brilliant crimson purple flowers, excellent for rockwork. Height 6 inches.	0	6

Calendula.

Hardy annual varieties of the common Marigold; very showy and easily grown, and flowering freely the whole summer and autumn.

	Per Packet—s	d
99 Meteor , light orange, striped white. 1½ feet	-	0 2

See also Canterbury Bell.

Ganna.

Half-hardy perennial, flowering the same season if sown early in February in stove or hot-bed, potted on and bedded out in June; very handsome sub-tropical foliage flowers in September.

	Per Packet—s	d
113 Crozy's New Hybrids , Finest Mixed, 3 feet	-	0 6

CARNATION.

IN every garden where a plentiful supply of richly-coloured, sweet-scented flowers is appreciated, a piece of ground should be devoted to the culture of these hardy border Carnations and Picotees. Any kind of garden soil, if fairly rich and deeply dug, will grow them to perfection, and, being more robust and free than the named show kinds, the plants should stand not less than eighteen inches apart each way. Sow the seeds thinly in light sandy soil at any time in March or April, and transplant into the flowering quarters in July. The seeds may be sown in finely-raked soil in the open air or in a cold frame; the latter place is not required for the sake of shelter, but only for protection against accidents. The *Perpetual* or *Tree* Carnations should be grown in pots and removed to the greenhouse in October, where they will bloom in winter and spring.

114 Stuart & Mein's Prize Strain.—The seed here offered has been saved from our complete collection of named varieties of all classes, each flower having been carefully fertilised by hand. The result will certainly prove a large proportion of double flowers of the highest value for out-door culture, while many will be worthy of selection for future cultivation. Per Packet, 2s 6d and 5s.

	Per Packet—s	d		Per Packet—s	d
115 Border Carnation , extra choice, mixed	1s and	2 6	118 Margarita , flowers in August if sown early in March; dwarf habit, profuse flowering, and sweet scented, 6d and	1	0

138 „ flore pleno , double flowered, mixed	-	0 3
139 Margaritae , large pure white flowers, sweet-scented	-	0 6
140 Candidissima compacta (Ragusina) beautiful silver foliage. 1 foot	-	- 1 0
141 Clementi , lovely foliage, covered with snowy white down. 1 foot	-	- 1 0

Cosmos.

A half-hardy annual, with extremely high and elegant foliage. At its best late in the summer. 2 ft.

	Per Packet—s	d
142 Bipinnata , purple	-	- 0 3

Cerastium.

Very dwarf compact-growing silvery white foliage plants with pure white flowers. Well suited for outside edgings to beds or for rock-work, a dry situation being best for both kinds. Hardy perennials.

	Per Packet—s	d
143 Biebersteinii .—Silvery foliage. Height 3 inches	-	0 6
144 Tomentosum .—Procumbent small white foliage. Height 3 inches	-	- 1 0

Chrysanthemum.

A most valuable class of hardy annuals and perennials for bedding and furnishing cut flowers. They are of easy culture, growing rapidly, and flowering freely the whole summer and autumn till cut down by frost. They should be largely grown for bunching to sell, as the flowers are very attractive and bright, and last well when cut.

Double Varieties.

	Per Packet—s	d
145 Carinatum , New Annual Hybrids, with large perfectly double flowers of brilliant colours, comprising pure white, golden, crimson, lilac, and bronze, many being exquisitely tipped and edged. 2 feet	-	0 6
146 „ Aureum , exact counterpart of the preceding, except that the foliage is of a bright golden colour	-	1 0
147 Coronarium , white, sulphur, lemon, and yellow shades. 3 feet	-	- 0 3
148 Dunnetti , very large and handsome flowers of rich golden yellow and white. 2 feet	-	- 0 3
149 Inodorum plenissimum , profuse flowering variety, with pure white flowers; splendid for bedding. 1 foot	-	0 4

Single Varieties.

150 Comtesse de Chambord , large white Paris daisy. 1½ feet	-	- 6d and 1 0
151 Frutescens Etoile d'Or , French Marguerite	-	- 6d and 1 0

153 Lord Beaconsfield , crimson, edged gold; 2 feet	-	- 0 3
154 Maximum , a grand perennial species, with pure white flowers, invaluable for cutting; 2 feet	-	- 0 6
155 Morning Star , flowers large, delicate primrose colour, most useful for cutting; height 1½ feet	-	- 0 3
156 Segetum grandiflorum , flowers deep yellow; 1 foot	-	- 0 3
157 The Sultan , velvety crimson maroon; 2 feet	-	- 0 3
158 The Shasta Marguerita Daisy , a handsome flower of the Maxima type, 4 to 5 inches across, with double row of white flowers and small yellow centre, 2 to 3 ft.	-	- 6d and 1 0
159 W. E. Gladstone , rich crimson; 2 feet	-	- 0 3
160 Burridgeanum , bright and varied colours; 3 feet	-	- 0 4

Cobæa.

Greenhouse climber, very pretty effective purple flower.

161 Scandens ,	-	- 0 6
-----------------------	---	-------

CINERARIA.

THE Cineraria is one of the very best plants we have to produce brilliant flowers for the decoration of the greenhouse or conservatory during the first four months of the year. To produce very large flowering specimens, the seeds ought to be sown about the end of May in a pan or pot, and as soon as the plants have formed two leaves other than the seed leaves they may be planted out to the number of six or eight in 4-inch pots. When the plants are potted off they will do better in a cold frame than anywhere else during the months of July, August, and September. When the plants have grown so as to quite cover the soil in the pots they may again be potted singly in small pots. Flower the largest plants in 8-inch and the smaller ones in 6-inch pots; the potting soil used when they are in small pots is finer than that used for the flowering specimens, but it is the same as regards its constituent parts; four parts good loam, one leaf mould, one cow manure, and one sharp sand. In potting, press in the compost moderately firm with the fingers.

Cineraria Stellata.

162 **Hybrida, Extra Choice Prize**
Strain: flowers of extraordinary size and substance of every shade of colour, many being over three inches across. Per Packet—s d 2 6

163 **Hybrida Plenissima**, saved from the finest double flowers only 1s & 2 6
 164 **Maritima**, half-hardy perennial with silvery foliage, fine for bedding. 2 feet 0 6
 165 **Stellata**. The Star Cineraria has become a great favourite wherever grown, and is most useful for conservatory decoration, and also for cutting. The flowers are small and star-shaped, of various colours, and are borne on long stalks well above the foliage. It stands better than the ordinary Cineraria when cut. 1s 6d and 2 6

Cockscomb.

Tender annual requiring a constant moist heat until the combs are full grown, when they may be removed to the greenhouse or conservatory. Sow in February or March in light rich soil, and place in a gentle hot-bed. As soon as ready prick out the plants singly into 3-inch pots, and again into 6-inch size, still keeping them plunged in a good brisk heat, but near the glass to prevent drawing.

166 **International Prize, Extra Selected** Per Packet—s d 1s, 1s 6d and 2 6

Chamaepeuce.

Valuable bedding or border plants which associate well with flowering subjects or with others in carpet bedding. Both are easily raised under quite cool treatment, better, in fact, than in heat. Half-hardy biennials.

167 **Cassabonae** (*Fish-bone Thistle*). Ornamental dark green foliage, covered with white spines. Height 1 foot 0 6
 168 **Diacantha**. — Ornamental white foliage, margined with green, and having large white spines. Height 1 foot 1 0

Clarkia.

Beautiful free flowering hardy annuals, easily grown, and very effective in beds or borders.

169 **elegans**, double rose. 2 feet - - - 0 2
 170 **Salmon Queen**, double, 1½ feet - - - 0 3
 171 **integripetala** - - - - - 0 2
 172 " **alba**, white - - - - - 0 2
 173 **pulchella**, red. 1½ feet - - - 0 2

Coix.

174 **Lachryma** (*Job's Tears*), an ornamental grass, well suited for drying to use in bouquets. Half hardy annual. Height, 2 feet - - - 0 2

Coleus.

Ornamental foliated greenhouse annual.

175 **Extra Choice Mixed**, saved from the finest new large-leaved varieties Per Packet—s d 1s, 1s 6d and 2 6

Collinsia.

Effective bedding hardy annuals, specially suitable for autumn sowing.

176 **Bicolor**, lilac and white. 1 foot - - - 0 2
 177 **Grandiflora**, purple. 1 foot - - - 0 2

Convolvulus.

178 **Major**, splendid hardy annual climber for covering trellises and verandahs quickly; flowers blue, crimson, purple, rose, white, and striped. Finest mixed - 0 2
 179 **Minor**, a fine hardy annual for bedding; flowers dark blue, white, crimson, violet, and rose. Height 1 foot. Finest mixed - 0 2

Crucianella.

180 **Stylosa**, a very pretty dwarf hardy perennial, flowering profusely all the summer; colour bright pink, and very sweet-scented. 6 inches - - - 0 3

Cowslip.

Valuable for early spring flowering, well adapted for the wild garden or woodland walks where the plants are not disturbed; in such situations they become acclimatized. Hardy perennials. Height 6 inches.

181 **Finest Mixed colours** - - - - - 0 6

Dahlia.

Half-hardy perennial autumn flowers of the highest value for cutting, and easily raised from seed to flower the first season. Sow in gentle heat early in February, and pot off the seedlings when strong enough; plant them out three feet apart the first week of June.

182 **Cactus**, Extra Choice Double Mixed - 1s, 1s 6d and 2 6
 183 " Extra Choice Single Mixed - 1s, 1s 6d and 2 6
 184 **Single**, Extra Choice Mixed - - - 6d and 1 0
 185 **Double**, Extra Choice Mixed - - - 1 0

Daisy (Bellis Perennis).

Showy perennials for the spring garden, about 4 inches high, and easily raised from seed, which should be sown out of doors in April; the seedlings being afterwards pricked off and planted in a shady spot.

186 **Finest Double Mixed**, - - - - - 6d and 1 0

Delphinium.

A noble class of hardy perennials; tall habit, and bearing in early summer great spikes of lovely flowers. Sow in April, and transplant in autumn into deep rich soil.

187 **Formosum**, rich blue, with white eye - - - 0 6
 188 **Nudicaule**, orange scarlet. 1½ feet - - - 0 6
 189 **Zalil**, new yellow-flowered species. 2½ feet - - - 1 0
 190 **Hybridum**, Extra Choice Mixed. 6 feet - - - 0 6

CYCLAMEN.

A VALUABLE class of winter and spring flowering plants for the greenhouse, of easy culture, and readily produced from seed. Sow early in June in well-drained pots of light soil, water well and cover with moss, and place them in a warm shelf of the greenhouse, away from draughts, until the seed germinates, after which gradually remove the moss, but shade from direct sunlight. When they have made three or four leaves prick off into pans, taking care to handle them gently, and do not press the soil too firmly about the roots. About the first week of March place the seedlings in 4-inch pots, and finally about the end of June in 6-inch pots. The soil at the final potting should consist of turfy loam and leaf mould, with some sharp sand. Place out in a cold frame in June, and plunge in coal ashes, watering and dewing the leaves; but carefully shade from direct sunlight and avoid cold draughts. Cyclamens grown in this way all the summer may be removed to the greenhouse in October, when the flowers begin to appear.

		Per Packet—s	d
191	Persicum magnificum , saved from the very best flowers, so as to produce perfection of colour with compact habit of growth; the blooms well displayed above the handsome foliage. Extra Choice Mixed	-	rs 6d and 2 6
192	Alba Perfecta , pure white, flowers of great size and fine substance	-	rs 6d and 2 6
193	Crimson King , rich crimson, large flowers of fine form and texture	-	rs 6d and 2 6

Dianthus.

A magnificent class of hardy biennials or perennials of easy culture, thriving in any ordinary soil, and flowering with great profusion the whole season. If sown in moderate heat in February and bedded out in May they will bloom the same season, and if sown out doors in June they will stand the winter, and come into flower early the following season. Height, 9 to 12 inches.

		Per Packet—s	d
194	Chinensis (Indian Pink), finest mixed double	-	0 3

222	„ 8 „	-	1 9

Gaillardia.

223	Hybrida Grandiflora , hardy perennial free flowering plant, easily grown, and flowering the same season if sown early in gentle heat. Flowers of all shades, from pale yellow to deep crimson. Height, 2 to 3 feet	6d and	1 0
224	Lorenziana (<i>Picta</i>), beautiful hardy annual for bedding and cutting; should be sown in March under glass. Flowers double, of various shades of yellow and bronze. Height, 1 foot	-	0 3

HOLLYHOCK.

A NOBLE hardy perennial old-fashioned garden plant, which may be grown from seed with more satisfaction than the majority of Florists' Flowers, the different colours being reproduced with little variation. Sow in the open ground in April, transplant in June, and finally plant out into deeply-dug rich ground in August, allowing the plants plenty of room, when they will throw up their grand spikes of bloom the following season.

225 **Mein's Special Prize**, Extra Choice Mixed; saved from our splendid collection of named varieties - Per Packet, 1s and 2 6

Gentiana.

226 **Acaulis**. This lovely early spring flowering Alpine plant is worthy of every attention; a cool moist situation should be chosen for the sowing of seed and for the culture of the plants up to the flowering stage. Winter the plants under glass in cold districts for the first season. The flowers are of an intensely deep blue colour; hardy perennial. Height 6 inches. - Per Packet—s d 0 6

Gesneria.

227 **Hybrida**.—Valuable plants for the stove or warm greenhouse, they are easily raised from seed, and flower the first season. The flowers, which are pendulous and freely produced, are borne on spikes in shape and style like those of a small Pentstemon; they require the same treatment as Gloxinia - 1 6

Geum.

228 **atrosanguineum flore pleno**, fine hardy perennial with large double crimson Potentilla-like flowers; fine for bedding or cutting. 3 feet - 0 6

Gloxinia.

A gorgeous class of hothouse plants, bearing enormous bell-shaped flowers of the richest velvety texture and brilliant colours. Sow the seeds early in February in a well-drained pan of loam, leaf mould, and sand, and place in a warm, moist position, shaded from sun. As soon as some are ready prick the plants out with a pointed stick into small pots, and continue till all are potted. Give air, plenty of water, and shift on into larger pots as growth requires, until they are in 5-inch size and beginning to show flower, after which remove to drier atmosphere.

229 **Grandiflora erecta**, extra choice mixed; saved from a magnificent collection of self, spotted, and veined flowers - Per Packet—s d 1s and 2 6

Gilia.

Hardy annuals of easy culture and free flowering.

230 **capitata**, light blue. 2 feet - Per Packet—s d 0 2
231 **tricolor**, violet, yellow, and white. 1 foot - 0 2

Godetia.

Beautiful hardy annuals with brilliant large flowers, well adapted for bedding; should have a sunny position, and plenty of room. Height, 1½ feet.

Iberis.

262 **Sempervirens** (The Evergreen Candytuft). A most useful hardy perennial with pure white flowers, it making a beautiful display throughout April and May; its glossy deep green foliage and compact habit of growth render it attractive at other times. Height 9 inches - 0 6

MARIGOLD.

A MAGNIFICENT class of half-hardy annual flowers, of the highest value for autumn display, and great favourites with florists for exhibition. The seed should be sown in gentle heat about the end of March, and the seedlings pricked out into a cold frame about a month afterwards, taking care to give them a good depth of light rich soil, plenty of room, and as near to the glass as possible. Harden off and plant out about the end of May, placing the plants at least two feet apart each way, and give a good soaking of water. If space is limited, it will be well to allow the first flower to show character before planting out, as, however good the strain may be, there are always some selfs and single flowers in the batch. The *African* Marigold requires very deep, rich soil to develop its immense blooms; but to produce fine quality of stripe in the flowers of the *French* Marigold, they should be grown on poor or hard ground.

For EXHIBITION, the plants must not be allowed to develop all the blooms formed, but should be thinned, leaving four or six blooms on the plants of the *African* sort and eight to twelve on the *French*. Stimulate the big blooms of the *African* with weak manure water, and shade till they are well up in the centre. In selecting *French* Marigolds for staging, see that the flowers are clean and well up, with clearly defined stripes, and arrange on the stands to show the greatest possible depth of flower.

	Per Packet—s	d
263 French Superb Striped , saved by ourselves from the finest striped double flowers only. Our strain of this flower is the finest ever seen, and has taken all the leading prizes during the past twenty years - 6d and	1	0

Mathiola.

	Per Packet—s	d
300 Bicornis (Night-scented Stock), an interesting hardy annual, opening its pretty lilac flowers after sun-down; sweetly scented -	-	0 3

PANSY.

THE Pansy is a universal favourite, and is admired by every one, its rich velvety flowers being produced from early spring till late in the autumn, and in mild weather even the whole winter. For autumn flowering sow in the open ground early in April, and for spring flowering sow in July and August, transplanting in October. The ground in which they are to flower should be deeply dug and be liberally manured with well-rotted dung. The plants should be set out at least one foot apart, for seedlings are much more robust and spreading than named varieties. Give plenty of water in dry weather, and keep all dead flowers off the plants.

	Per Packet—s	d
301 Mein's International Prize , Finest Mixed; these are the finest class of Pansies for cutting or bedding, being very robust and free flowering, and the flowers have long stalks, which raise them above the foliage	- 1s 6d and	2 6

303 Cliveden, Purple , - - - - -	- -	0 6
304 „ Yellow , - - - - -	- -	0 6
305 „ White , - - - - -	- -	0 6

PETUNIA.

THE usefulness of the Petunia rests upon the extreme beauty of its large and brilliant flowers, and on the ease with which it may be adapted to a variety of circumstances for decorative effect. It is a half-hardy perennial or greenhouse soft-wooded plant, but it may be easily raised from seed, and will flower freely the same season. The grand double varieties are splendid plants for the greenhouse, and well-grown specimens make a fine effect in the conservatory and on the exhibition table. Sow early in February or March in pans of light rich soil well drained, and place on a warm shelf in the greenhouse. Prick out the seedlings into small pots, and harden off those to be bedded out in June. The plants intended for flowering indoors must be potted on into larger pots till they reach the 8-inch size for flowering in. When young, the plants should be pinched to induce a dwarf branching habit, and the principal shoots must be supported with neat stakes. A little weak liquid manure is very good for large plants in pots, but this should not be overdone.

Single Varieties.

	Per Packet—s	d
306 grandiflora , Extra Choice Mixed	- - 6d and	1 0
307 „ pure white	- - -	0 6
308 „ Adonis , brilliant rose pink	- - -	0 6

Double Varieties.

	Per Packet—s	d

337 insignis , sky blue, with eye	-	0 2
338 „ alba , pure white variety	-	0 2
339 maculata , white, blotched violet	-	0 2

PRIMULA.

IF the following notes on the culture of the *Chinese Primula* are adhered to, there should be no difficulty in having a good display of flowers from October till May. For early flowering sow the seeds in March, and for late use about the end of April. As soon as the seedlings are large enough, prick them off into pans or boxes, giving plenty of drainage, and using rather rough soil. After the plants have filled the space allotted to them in the boxes, they should be potted off into 3-inch size, and again in three or four weeks into 6-inch pots, which is the flowering size, still using the same rough compost, with a little soot added. After this potting they may be placed in cold frames slightly shaded from the sun, and sprinkled overhead every evening after bright days. A few flower spikes will appear on the earliest plants during August, but these should be removed, and by October the cultivator will be rewarded by fine sturdy plants, which will continue flowering until the end of January, having been placed in a warm greenhouse when the nights begin to get cold. The second batch of plants are treated in the same way as the first until the middle of September, when they should be placed in 7 or 8-inch pots; and it is very important that this last potting should be done at the right time, for any delay allowing the plants to become pot-bound will cause disappointment. There should be no difficulty in having fine trusses of flowers from these up till the end of April.

Single Varieties.

		Per Packet—s	d
340	Sinensis Fimbriata (new), large flowering, extra choice mixed. A splendid strain, with heavily fringed flowers of enormous size and substance, strongly recommended, 1/6 &	2	6

366	Hispanica , blue. (Love in a mist). 1 foot	-	- 0 2

Oenothera (Evening Primrose)

Very beautiful hardy perennials or biennials, extremely showy towards the evening. All are of easy culture, preferring a light sandy soil; the tall kinds should be planted amongst shrubs, being given a sunny position.

		Per Packet—s	d
367	Biennis .—Clear yellow flower. Height 3 feet	-	- 0 3
368	Bistorta Veitchii .—Hardy annual, with small bright yellow flowers, spotted yellow. Height 1 foot	-	- 0 3
369	Drummondii nana .—Dwarf, neat habit, and very free blooming, flowers bright yellow. Height 6 inches	-	- 0 3
370	Taraxacifolia alba .—A beautiful dwarf-growing variety; with pure silvery white flowers. Height 6 inches	-	- 0 6

Oxalis.

Very dwarf and fast-growing half-hardy perennials, best suited to rockwork or sloping banks where there is no great depth of soil.

		Per Packet—s	d
371	Rosea .—Bright rose-coloured flowers. Height 6 inches	-	- 0 6

Onopordon.

372	Acanthium (Scotch Thistle), a stately plant of strong growth with woolly leaves and large crimson flowers: hardy biennial. 8 feet	-	- 0 6
-----	--	---	-------

Pentstemon.

Beautiful half-hardy perennial of the highest value for producing in beds or borders a brilliant display of colours in autumn. Sow early in February in pans of light rich soil, and place in a warm temperature till the seedlings come out. Prick out two inches apart when fit, and harden off to plant out end of May. The soil should be light but very rich, and, if necessary, the flower spikes should be tied to stakes as they advance in growth, to prevent their being broken by wind.

		Per Packet—s	d
373	Hybridus , Extra Choice; saved from our large collection of named sorts	-	- 6d and 1 0

Perilla.

374	Nankinensis , a fine half-hardy annual with rich bronzy-purple leaves; much used for bedding. 2 feet	-	- 3d and 0 6
-----	---	---	--------------

Phacelia.

		Per Packet—s	d
375	Campanularia , a new and most beautiful dwarf hardy annual of rich deep blue colour. 1 foot	-	- 0 3

STOCKS.

THE *Summer-flowering* or *Ten-Week* Stocks are amongst the finest annuals in cultivation for beds or borders, their massive spikes of richly-coloured flowers and spicy odour combining to gratify the senses in no ordinary degree. Sow the seed thinly in pans, and place in moderate heat early in April; prick out into a cold frame before the plants get crowded, harden off and plant out with nice balls of roots when the weather is mild and showery about the end of May. Stocks will flower fairly well in any garden soil; but if rich and long-lasting bloom is desired, the soil must be rich and deeply dug, and the plants must have plenty of water in dry weather. The *East Lothian Intermediate* Stocks, of which we make a speciality, may be sown in February or March, and planted out with the summer Stocks in May, when they will come into flower in August, and should the winter be mild will bloom till Christmas. They may, however, be lifted and potted for blooming in the conservatory or cool greenhouse, their short spikes of deliciously-scented flowers being very acceptable in that dull season. For spring flowering they should be sown in July or August in the open ground, when they will commence to bloom in May of the next year.

For Exhibition, the *Giant Perfection* and the *Giant* or *Tree* Stocks are finest. Select long compact spikes of perfectly double flowers of the richest and most decided colours. Protect from rains and hot sunshine.

Large-flowering German Ten-Week. Height about 18 inches.

A greatly improved variety of the *German Ten-Week*, with long spikes of large blooms.

	Per Packet—s	d
376 Collection of 12 separate colours	-	2 6

385 Purple	-	6d and 1 0
386 White	-	6d and 1 0
387 Mixed	-	6d and 1 0

Phlox Drummondii,

As a bedding plant this is not only one of the prettiest, but, since the distinctive colours can be secured true from seed, it is also one of the cheapest. The flowers of the *Grandiflora* section are very large and round with a distinct auricula eye, and the colours are very rich and dense, standing the hot weather when many other plants are useless. If the seed is sown early in April, the usual nursing of a half-hardy annual will suffice to ensure strong plants to put out at end of May. As the season advances peg down the shoots and pick off all dead trusses to prevent the plants being exhausted ripening seeds.

	Per Packet—s	d
396 Grandiflora. Collection of 12 distinct colours	-	2 6
397 " " 6 " " "	-	1 6
398 " " " " " "	- 6d and	1 0
399 Cuspidata, new Star Phloxes, very curious and beautiful.

405 Gold-laced Varieties, Extra Choice Mixed,	- 6d and	1 0

	Per Packet—s	d
388 Beauty of Nice, winter flowering stock (new), a novelty of surpassing beauty. The flowers are a delicate fleshy pink, quite a fashionable shade, and delightfully fragrant. Although properly classed as a winter flowerer, it may, on account of its rapidity of growth, be also grown as a ten week stock	-	1 6

389 Empress Elizabeth, one of the winter flowering varieties, bearing immense spikes of bright carmine flowers; grand for pots or cutting	-	1 0
--	---	-----

390 Princess Alice. New Perpetual, a magnificent white stock fast becoming a great favourite both for pot culture and the open ground,	- 6d and	1 0
---	----------	-----

East Lothian Intermediate. A most valuable strain of hardy Stocks for late autumn or spring flowering; habit dwarf and branching, producing for a long time in succession fine compact spikes of deliciously-scented double flowers. Ours is the *true strain*, and will give over 80 per cent. of double flowered plants.

	Per Packet—s	d
391 Crimson	-	6d and 1 0
392 Scarlet	-	6d and 1 0
393 White	-	6d and 1 0
394 Purple	-	6d and 1 0
395 Mixed	-	6d and 1 0

Physalis.

	Per Packet—s	d
406 Franchetti, a giant winter cherry from Japan, producing very large, handsome, orange scarlet seed vessels, resembling Chinese lanterns; valuable for autumn decoration in greenhouse. 2 feet	-	0 6
407 Established plants can also be supplied	Per Doz.	6 0

Poppy.

Poppies are amongst the most fashionable flowers of the day. The perennial species *orientale* have enormous scarlet flowers, one foot across; while the varieties of *nudicaule*, or Iceland Poppies, bear large quantities of lovely small flowers on long stalks throughout the whole summer. The single annual varieties are very beautiful, and if sown in August come into flower the following June and July.

Single Varieties.

	Per Pkt.—s	d
408 Miss Sherwood, flowers satiny white, edged silky Chamois pink. 3 ft. high	-	0 6
409 nudicaule (Iceland Poppy), white, yellow, and orange scarlet. 1 foot.	-	0 3

418 The Mikado, white, fringed, and edged crimson. 2 feet	-	0 3
419 Showy hardy annual with purple foliage and dark crimson feathery flowers. 3 feet	-	0 3

Prince's Feather.

SWEET PEAS (*A' Specialité*).

THE immense and rapid improvement which has taken place during the past few years amongst Sweet Peas has led to a corresponding increase of interest in their cultivation. The culture of Sweet Peas is of the simplest description, any open situation and fairly rich garden soil being all they require. The first sowing should be made early in February in pots under glass, to be transferred to the open air about middle of April, and at the same time a second sowing put in, which will carry the flowering period on till severe frost sets in. The best system of treatment is to plant clumps of each variety separate, at intervals of four feet along each side of a path, the position allowing of easy access in gathering the flowers. The following list of 48 varieties of climbing Sweet Peas is carefully selected after repeated trials, and consists of all the best and most distinct colours of the *grandiflora* class introduced in this country and in America. They are divided into sections according to the prevailing colour, for the convenience of selection, the largest or darkest tint being the first named in each section. The mixture offered at foot is made by ourselves, and consists of named varieties only, the colours being blended with great care and in due proportion.

Grand Selection of English and American Large-Flowered Varieties.

White.			
	Per Packet—s	d	
420 Sadie Burpee , a giant-flowered variety of hooded form	-	0	3

CUPID OR DWARF SWEET PEAS.

AN entirely new class introduced within the last few years, and rapidly increasing in popularity. The plants form dwarf spreading bushes, less than a foot in height and as much across, the flowers being borne on stiff short stems rising above the foliage. They should prove useful for large beds or lines in the flower garden, and should be specially useful where room cannot be spared for the climbing sorts.

	Per Packet—s	d
474 Boreatton Cupid , rich deep maroon	-	0 6
475 Countess of Radnor Cupid , delicate lavender	-	0 6
476 Firefly Cupid , deep glowing crimson	-	0 6
	Per Packet—s	d
477 Pink Cupid , bright rose-pink and white	-	0 6
478 Primrose Cupid , creamy primrose-	-	0 6
479 White Cupid , pure white	-	0 3

GARDENING GUIDE FOR 1904.

Portulaca

Half-hardy annuals of dwarf trailing habit; fine for edgings and rockwork. Sow early in May in open air, thin out and transplant in wet weather.

	Per Packet—s	d
480 Grandiflora , Finest Mixed	-	0 3
481 „ Flore pleno , Finest Mixed	-	0 6

Primrose.

A charming spring flower of easy culture; the new large-flowered hybrids are of every shade, from pure white to the deepest crimson and purple. Still more interesting is the strain of blue shades lately introduced.

	Per Packet—s	d
482 Choice Hybrids , Finest Mixed	1s, 1s 6d and	2 6
483 New Blue Hybrids (G. F. Wilson's), Extra Choice.	1s, 1/6 and	2 6
484 Yellow Common	-	0 6

Potentilla.

Hardy perennials with Strawberry-like foliage, and pretty crimson, yellow, and striped flowers freely produced the whole summer; fine for beds or borders.

	Per Packet—s	d
485 hybrida , Finest Mixed	-	0 3
486 „ flore pleno , Finest Mixed	-	1 0

Pyrethrum.

487 aureum (Golden Feather), well-known dwarf edging plant with yellow foliage. 6 in.	-	3d and	0 6
488 „ selaginoides , beautiful fern like leaves	-	-	0 6
489 Hybridum , Double Mixed,	-	-6d and	1 0

Rhodanthe.

Half-hardy everlasting flowers with pretty drooping satiny pink and white flowers; valuable for winter bouquets. Height, 1 foot.

490 Atrosanguinea , purple-crimson	-	-	0 6
491 Maculata , rose and white	-	-	0 3
492 Manglesii , rose-pink-	-	-	0 3

Ricinus (Castor Oil Plant).

Handsome half-hardy annuals with ornamental foliage; splendid for sub-tropical bedding, &c.

493 Gibsoni , dark purple stems and leaves. 5 feet	-	0 3
494 Extra Choice Mixed	-	0 3

Rocket (Hesperis).

Hardy perennials of rapid growth, producing numbers of flowers early in spring when sown the previous summer, this being a preferable mode of culture to always retaining the plants for another season; they make a good foreground to shrubs. Height, 2 to 3 feet.

495 Purple ,	-	0 3
496 White ,	-	0 3
497 Sweet (<i>Hesperis tristis</i>).—A very fragrant, free-blooming biennial with greenish yellow flowers freely produced	0 3	

Rose Campion.

A hardy perennial, valuable for shrubby borders, where it can remain undisturbed; profuse flowering and lasting in beauty a long time; flowers bright crimson, with silvery foliage. Height, 2 feet.

Per Packet, 3d.

Rudbeckia

Hardy perennials, lasting in beauty a long time, and invaluable for summer and autumn display; each blossom is like a miniature Sunflower. The seed should be sown in the spring, and the plants afterwards bedded until the following spring. Height, 3 feet.

499 Bicolor , flowers orange-yellow, with brown centre	-	0 3
500 Californica , bright yellow flowers with raised centre	-	0 6

Salpiglossis

Half-hardy annual with large richly-coloured and veined trumpet-shaped flowers; splendid for beds, borders, and cutting. Height, 2 feet.

501 Collection of 6 varieties	-	1 6

Any variety of Flower Seeds can be supplied, although not enumerated in the foregoing list. What we have not in stock we will procure, and forward in the course of a few days. Other Firms' Novelties we can also supply, in original packets if desired.

SUPERIOR LAWN GRASS SEEDS.

In constructing a new Lawn, to ensure a fine turf a good preparation is necessary. Let the ground be well dug to the depth of 18 inches. After digging, rake down level and roll firmly, and fill up the hollows, repeating the operation till a perfectly level surface is obtained; after which rough the surface with a rake, and sow the seed, when the ground should be again well rolled. April and September are the best months for sowing; about 60 lb. per acre is the quantity required. The Lawn should be carefully weeded, and the first cutting with a scythe when three or four inches long, rolling again frequently.

Our Special Mixture, 25s per Bushel; 1s 3d per Lb.

An ORDINARY MIXTURE can be supplied at 20s per Bushel; 1s per lb.

POPULAR FLOWER SEEDS BY WEIGHT.

Showy sorts frequently required in large masses for Bedding. In quantities of not less than an ounce.

GLADIOLI.

Our Collection of Exhibition Gladioli has been awarded Prizes at Edinburgh Shows; Earl's Court and Crystal Palace London; Newcastle-on-Tyne, Dundee, &c.; the stands of noble spikes being one of the most attractive features of the Shows.

AS an autumn exhibition flower, the Gladiolus ranks high in the estimation of the florist; a well set-up stand of good spikes never failing to command admiration. In recent years great improvement in the quality of flower and spike have been effected by the raisers of new varieties, while the low price at which the best class of show flowers can be purchased has had the effect of greatly widening the circle of growers and admirers of the flower. The ground to be devoted to their culture, after providing shelter and efficient drainage, should be trenched, and a plentiful supply of well-rotted manure mixed with the soil to the depth of 2 feet. As early in March as the state of the weather will permit, the surface should be forked over and the bulbs planted; on no account should this be done until the ground is fairly dry and warm. Plant at a uniform depth of 4 inches, in lines 15 inches apart and 12 inches between the plants. A layer of coarse river or sea sand should completely surround each bulb to prevent moisture lodging near it in excess. When the shoots appear keep the surface well stirred, and if excessive heat and drought prevail during May or June, give frequent soakings of rain-water, and cover with short manure. After the flower-spike can be distinctly felt in the sheath, secure the plants to a neat stake, and begin to feed with liquid manure twice a week, continuing till the blooms open. In order to produce the highest class of exhibition spikes, the shading box must be applied as soon as the first blooms show colour. The box is oblong in shape, about 24 inches in length, 8 inches wide, and 6 inches in depth from back to front, the upper half of the front being of glass and the lower half of wood; the whole is fixed to a stout square stake 6 feet long, and the height is regulated by a pin or wedge at the back. The varieties described in the following list are those which we have found by experience to be the best for exhibition. They are characterised by producing long, stout spikes, well set with large, well-shaped, richly coloured flowers, such as, if intelligently grown and set up on the exhibition table, cannot fail to get a high place in the strongest competition. We have distinguished the different varieties according to the order in which they generally bloom by the letters A, B, and C; those marked A being usually the earliest, and those marked C the latest. In order to have as many as possible in bloom at any given time, the late ones should be started in pots or planted some weeks before the early-flowering ones, when the exhibitor will have more to choose from when required for a particular date. In late districts this is necessary with the whole stock.

Orders for Gladioli should reach us if possible before planting time, as if delayed many choice sorts are often sold out early, and cannot be satisfactorily replaced. Every bulb we send out is warranted sound and French grown.

			64 Vermilion (C), scarlet, suffused blood-red at edges; tall well furnished spike; effective variety -	-	0 8

65 **Extra Choice Hybrid Seedlings**: — A grand lot, saved from the finest named varieties, which will produce handsome spikes with endless variety of colour. For mixed beds or borders they are specially adapted. Per 100, 15s and 17s 6d; per Doz., 2s 6d.

Hybrid Large-Spotted (Lemoine's Hybrids)

Quite a distinct section, and what chiefly distinguishes them is the presence of a large yellow blotch surrounding a maroon spot on the lower segments of the flowers; they are robust, vigorous, and hardy.

66 **Choice Mixed Hybrids**, large stained, per 100, 10s 6d; per doz. - 1 6

67 **Finest Named Varieties**, per doz., 5s to 9s.

Childsii

These outrank all other Gladiolus in size of spike and bloom, and are the result of a careful cross between the finer varieties of Gandavensis and that lovely species Saundersoni.

68 **Choice Mixed Hybrids**, 12s 6d per 100; 2s per doz.

Nanceianus

A hardy section, bearing freely-branched erect spikes of bloom, the individual flowers of which are of gigantic size; the colours are of most brilliant and varied hues, richly spotted, and all are remarkably handsome.

69 **Choice Mixed Hybrids** - 2s per Doz.

Colvillei Alba (The Bride)

Valuable for forcing, very free flowering, and producing neat, compact spikes of pure white flowers; very useful for cutting.

This early flowering variety should be planted before the middle of February as, if kept longer out of the ground, the bulbs deteriorate, and do not flower satisfactorily.

Per 100, 3s; per Doz., 6d.

GLADIOLI (Continued.)

72 **Snow White**
The spikes are of large size, the flowers being of exceptional substance, and the petals gracefully recurved. The upper part of the flower is pure white, the lower slightly shaded cream, with a faint line of purple extending about half-way through the centre of the petals.
Per 100, 12s 6d. Per Doz., 2s.

73 **Scarlet Brenchleyensis**
We beg to draw special attention to this showy and cheap variety. Its brilliant scarlet colour makes it the most desirable sort for clumps, or lines for walks and drives; and when planted amongst dwarf shrubs its long spikes of vermilion scarlet produce a splendid effect. Extra fine flowering bulbs. *Very scarce.*
Per 100, 10s. Per Doz., 1s 6d.

TUBEROSES.

NOTHING can excel these delicious sweet-scented flowers, resembling great trusses of orange blossom; are grown by thousands in America for winter cut flowers, where they are held indispensable, and sold at a very high price; can be equally grown here. Plant in small pots, and place in a cold frame free from frost, giving no water till growth commences; afterwards they should be watered freely until abundant foliage is formed, when no water should be given until the spikes show, after which they may be kept soaking in water.

Excelsior Pearl, Fine Imported Roots, strongly recommended, per Doz., 2s 6d; per 100, 12s 6d and 15s.

African, Fine Imported Roots, ready in September.

Victor Hugo, deep rich crimson
Victor Verdier, rose, shaded carmine
Violette Bouyer, large, white fringed, soft flesh
Xavier Olibo, purple, shaped amaranth

And many other sorts, including newer ones of recognised merit.

TEA-SCENTED ROSES.

From open ground or in pots, 15/ to 30/ per dozen (except New Varieties).

We ourselves have grown all these varieties with success, in the open ground, where they have experienced very severe frost, on several occasions our thermometers registering from 2 to 10 degrees below zero. They require, of course, a slight mulching during winter with litter or leaf mould. Beds planted with one variety produce a splendid effect, blooming continuously during summer and autumn, and stand a lot of cutting.

When planted out of doors, the chief thing necessary for their successful cultivation is a soil well drained; and if it be not naturally so, this point must be obtained by artificial means. A light rich soil is preferable, and a slight protection against frost suffices. We have found branches stuck loosely among the plants so as not to exclude the circulation of the air, to answer this end. Fir or Furse branches will answer the purpose.

Alba Rosea, white, large and full.
Anna Olivier, rosy flesh.
Caroline Kuster, lemon yellow, large and free.
Catherine Mermet, delicate flesh; large.
Comtesse Nadaillac, orange and copper, centre salmon.
—de Panisse, pale pink, tinted copper.
Devoniensis (old), pale rose.
Dr Grill, rose, shaded copper, very pretty.
Empress Alexandra of Russia, large round dropping flower of a rich lake colour, shaded orange.
Enchantress, creamy white, tinted buff, good shape.
Ernest Metz, large carmine rose, deeper in centre.
Etoile de Lyon, sulphur yellow, centre bright yellow.
Francisca Kruger, copper yellow, shaded peach
Georges Nabonnand, large pale rose, shaded yellow.
Gloire de Dijon, buff, orange centre, very hardy

Hon. Edith Gifford, flesh colour, centre salmon-rose.
Innocente Pirola, pure white.
Isabella Sprunt, sulphur yellow.
Madame Berard, fawn yellow, Dijon type; grand climber.
—Pernet Ducher, canary yellow, changing to creamy white, fine in bud.
—Pierre Cochet, golden yellow, passing to cream.
—Bravy, cream colour, large and beautiful.
—Charles, bright apricot, beautiful in bud.
—Cusin, rosy purple, with yellow base.
—Falcot, deep apricot.
—Hoste, pale lemon, deeper yellow at base.
—Lambard, salmon pink, shaded rose.
—de Watteville, pale lemon, margin pink.
—Welsh, pale yellow, orange centre.
—Hippolyte Jamain, white centre, copper.
Maman Cochet, flesh pink, tinted carmine, base yellowish salmon.

Marie van Houtte, yellowish white, edges rose.
Monsieur Francois Menard, deep pink shaded.
Muriel Grahame, a fine pale cream, flushed rose.
Niphotos, beautiful white, splendid.
Papa Gontier, bright pink shaded, very fine.
Perle des Jardins, pale yellow, very free.
Rubens, rose white.
Safrano, apricot yellow, charming in bud.
Sunrise, salmon, fawn, and yellow.
Sunset, rich saffron.
Souvenir d'Un Ami, salmon, rose, large.
Souvenir de Catherine Guillot, coppery orange red, tinted carmine, most free.
Souvenir de Therese Levet, deep rosy crimson, shaded red.
The Bride, pure white.
The Queen, a white sport from *Souvenir d'Un Ami*.
White Maman Cochet, like "Maman Cochet," only pure white, occasionally tinged blush.

And many other sorts.

HYBRID TEA-SCENTED ROSES.

From open ground or in pots, 15/ to 30/ per dozen (except New Varieties).

The Hybrid Teas are rapidly and deservedly becoming very popular. Most of the varieties retain the hardy and robust character of the Hybrid Perpetuals and the free continuous early and late blooming qualities of the Teas, rendering them eminently suitable for bedding and massing on walls or pillars. Many of our finest exhibition roses also belong to this class, and their number is rapidly increasing.

Augustine Guinoisseau, a flesh coloured
La France

Bardou Job, fiery crimson, shaded black, semi-double

Belle Siebriecht (or Mrs W. J. Grant), bright rosy pink, large, full-pointed flower

Bessie Brown, immense creamy white, shell shaped and highly perfumed

Captain Christy, soft flesh colour

Caroline Testout, large light salmony-pink

Cheshunt Hybrid, cherry carmine, full

Duchess of Albany, deep even pink

Gustave Regis, nankeen yellow, beautiful bud

Grace Darling, base of petals creamy white, deeply tinted and shaded with pinkish peach

Gruss an Teplitz, one of the finest roses as a bush, pillar, or masses; semi-double, vivid crimson, tinted maroon, producing large bunches freely; sweet scented

Kaiserin Augusta Victoria, large cream, shaded lemon

Killarney, flesh shaded pink, suffused pale pink

Lady Mary Fitzwilliam, bright delicate flesh colour

La France, salmon pink, white centre

Liberty, large brilliant velvety crimson, of even shade throughout

Madame A. Chatenay, pale carmine, tinted salmon, good form

Madame Julos Groslez, pure porcelain rose, pink, tinted yellow at base, beautifully formed; a really good rose

Marquise Litta, a full carmine, rose-vermilion centre

Mildred Grant, creamy white, flushed pale peach, magnificent flower

Mrs W. J. Grant (or Belle Siebriecht), a very free, beautifully formed, bright rosy pink

Souvenir de President Carnot, soft, creamy white, tinged pink, large and full; one of the best of recent introduction

Viscountess Folkestone, creamy white, shaded to pink

Waltham Climber, No. 1, bright rosy crimson

— **No. 3**, brighter crimson, with redder shade

MOSS ROSES.

8/ to 12/ per doz. (except New Varieties).

A well-known class of Roses. Should be planted in rather rich soil in an open situation, well exposed to the sun; very hardy, requiring little pruning.

Baron de Wassenaer, red, a suitable pillar rose.

Blanche Moreau, pure white, large and full.

Celine, velvet crimson and purple.

Common, rose blush.

Comtesse Murinais, pale flesh, changing to white.

Crested, beautiful crested buds.

Gloire des Mousseuses, rose, very large.

Laneii, rosy crimson, tinted with purple.

Madame Moreau, fine vermilion red.

Perpetual Crimson, crimson blooms in clusters.

Perpetual White, white blooms in clusters.

Unique or Provence, deep crimson.

White Bath, paper white, beautiful, best Moss Rose.

CLIMBING and RAMBLER ROSES.

A selection of the best Climbing Roses brought together from the various classes. The hardiest kinds are marked thus †, and should be planted in the most exposed situations. Many are useful as conservatory and greenhouse climbers, also for training on walls, pillars, arbours, and pergolas out of doors.

The letters placed immediately before the name indicate the family to which the variety belongs, viz:—Tea (*t.*), Hybrid Tea (*h.t.*), Noisette (*n.*), Hybrid Perpetual (*h.p.*), Bourbon (*b.*), Polyantha (*p.*), Ayrshire (*a.*), Wichuriana (*w.*).

12/ to 24/ per dozen (except New Varieties).

† **P. Aglaia** (yellow rambler), bright yellow; small flowers, in pyramidal clusters.

† **N. Alister Stella Gray**, pale yellow with orange centre (like Wm. Allen Richardson).

† **T. Belle Lyonnaise**, deep lemon, distinct in colour.

† **A. Bennett's Seedling**, white, small, and double.

† **D.T. Bouquet d'Or**, pale, yellow centre, coppery.

† **Blush Rambler** (new).—In growth similar to *Crimson Rambler* and as vigorous; rich blush, lighter in the centre; when fully developed resembling Apple-blossom; sweetly scented; hardy and blooms freely. Dwarfs, 5s.

† **Carmine Pillar**, single, bright rosy carmine, free and rampant in growth.

N. Celine Forestier, rich sulphur yellow.

† **H.T. Cheshunt Hybrid**, cherry carmine, large and full.

T. Climbing Devoniensis, white, with yellow tint.

† **H.P. — Jules Margottin**, pink or cherry.

† **H.T. — Captain Christy**, large, soft flesh.

T. Climbing Niphetos, pure white.

† **B. — Souvenir de la Malmaison**, clear flesh, large, and double.

† **P. Crimson Rambler (Turner's)**, of very vigorous growth, making shoots from 8 to 10 feet in height during a season, hardy flowers, in large trusses of the brightest crimson colour.

† **P. Dorothy Perkins**, a beautiful shell pink, flowering in large clusters, sweetly scented, with finely-shaped small double flowers, in habit like *Crimson Rambler*.

† **A. Dundee Rambler**, creamy white, semi-double.

† **P. Euphrosine** (pink rambler), bright red, half open buds, carmine.

† **T. Gloire de Dijon**, buff, orange centre.

N. Lamarque, very pale lemon colour.

N. L'Ideal, yellow and metallic red.

† **A. Madame d'Arblay**, white, blooming in large clusters.

N. Marechal Niel, bright golden yellow, perfect form.

† **P. Perle d' Or**, nankeen, yellow, with orange centre.

† **P. Psyche**, a companion to *Crimson Rambler*; hardy and free flowering; flowers produced in clusters, colour white, suffused salmon-rose and pink with yellow base.

† **P. Queen Alexandra**, rosy pink, similar in growth to *Crimson Rambler*

† **A. Rampant**, pure white.

† **H.T. Reine Marie Henriette (Red Gloire)**, clear reddish crimson.

N. Reve d'Or, deep yellow and buff.

† **P. Rubin**, large deep crimson, type of *Crimson Rambler*.

N. Reine Olga de Wurtemberg, bright red, semi-double.

† **A. Ruga**, pale, flesh, large and double; novel and distinct.

† **A. Splendens** (Myrrh-scented), white, edged with red, semi-double.

† **Tea Rambler**.—A seedling from *Crimson Rambler* and a Tea; growth vigorous; colour coppery pink with a salmon flush; very distinct; a charming creeper. Dwarfs, 3s 6d.

† **A. The Garland**, nankeen and pink, changing to white.

† **P. Thalia** (white rambler), white, flowering in pyramidal clusters.

† **H.T. Waltham Climber, No. 2**, bright crimson, good flower.

† **W. Wichuriana Gardenia** (bright yellow rambler), free and fragrant

† **N. Willam Allen Richardson**, orange yellow, edged white, free-flowering.

PROVENCE ROSES.

6/ to 9/ per dozen.

The Provence or Cabbage Roses are all deliciously fragrant, require a rich soil, and need to be closely pruned.

Alba, white.

Cabbage, rosy pink, large and full.

Crested, rose colour.

De Meaux, rosy pink and lilac.

Fringed.

Unique or white, pure white.

Reine de Provence, large lilac blush vigorous.

Spong, pale rose.

AUSTRIAN BRIAR ROSES.

9/ to 12/ per dozen.

This is a species of Rose producing yellow and bronze flowers; they are very hardy, succeeding best in a rather poor soil. The flower buds being chiefly at the end of the shoots, the plants should therefore be pruned very little; the shoots, however, should be well thinned out. Planted in clumps they are particularly effective.

Copper, single, copper coloured, exceedingly pretty.

Persian Yellow, the deepest yellow, large and full.

Harrisonii, semi-double, fine golden yellow.
Single Yellow, single, very pretty.

A few of these can be had on Standards.

ROSA RUGOSA (Japanese Roses).

This is a very pretty rose, with large green leaves and clusters of single sweet-scented flowers, thereafter bearing very large crimson seed-pods or hips, which are very ornamental. They are also excellent for planting for game, especially the red variety. **Special price per 100 or 1000 for covert planting.**

Rosa Rugosa, Single Red, per doz. 6/ to 9/

Rosa Rugosa, Single White, per doz. 9/ to 12/

Rosa Rugosa, Mrs George Bruante, semi-double white, very sweet scented, per doz. 9/ to 12/

MISCELLANEOUS ROSES.

Each, 9d to 1/6.

Blairii No. 2, pale blush, of climbing habit.

Celestial, flesh colour, beautifully tinted with pink.

China (Blush), the old original blush.

China (Cramoise Superieure), rich velvety crimson.

Fellenberg, rosy crimson, very free,

Fortune's Yellow, copper and fawn adapted for walls.

Hermosa, deep pink, medium size, very fine.

Laurette Messimy, rose pink, tinted bronze, yellow at base of petals.

Little Pet, double white, a profusion of bloom.

Madame E. Resal, satiny pink, tinted yellow at base of petals; small.

Madame Isaac Perierre, a large rose, light carmine.

Maiden's Blush, flesh colour, very pretty.

Mrs Bosanquet, pale flesh blooms in clusters.

Queen Mab, apricot, shaded orange and rose.

Sweet Briar, foliage, sweetly scented.

York and Lancaster, red and white striped.

LORD PENZANCE'S HYBRID SWEET BRIARS.

Per Dozen, 12s to 24s.

These lovely hybrids form quite a distinct break from any class of Rose yet in commerce. They are crosses between the common Sweet Briar and various old-fashioned garden Roses, Austrian Briars, &c. The foliage of every one of them is as sweetly scented as the common Sweet Briar. The trees are perfectly hardy even in the most bleak and exposed situations. After the flowers are over they are followed by bright scarlet seed pods or hips in great numbers, which, nestling amongst the deep green scented foliage, make the tree delightfully ornamental till quite late in the autumn.

Amy Robsart, lovely deep rose, the buds before opening are most graceful, of true Sweet Briar type.

Anne of Geierstein, dark crimson, followed by an abundance of pretty clustered bunches of hips.

Brenda, maiden's blush or peach, dainty in colour and shade.

Catherine Seyton, a very pleasing tint of soft rosy pink, the bright golden anthers being very prominent.

Edith Bellenden, pale rosè, flowering profusely in clusters at the ends of the shoots, which are long and pendulous.

Flora M'lvor, pure white, blushed with rose, perfect for cutting, large flowers.

Green Mantle, bright rich pink, with a band of white encircling the anthers, with background of white.

Jeannie Deans, semi-double, very large scarlet crimson, flowering freely in clusters.

Julia Mannering, soft pearly or porcelain pink, the prettiest of all the pinks; thoroughly perpetual.

Lady Penzance, beautiful soft tint of copper, with a peculiar metallic lustre; the base of each petal is a bright yellow.

Lord Penzance, soft shade of fawn, passing to a lovely emerald yellow in the centre, toned with delicate pink.

Lucy Ashton, pretty white blooms with pink edges, not so large as some others, wonderfully free flowering.

Lucy Bertram, a fine deep crimson, the richest of all; centre pure white, with bright yellow anthers.

Meg Merrilees, gorgeous crimson, very free flowering, has a robust habit, large foliage.

Minna, large pure white, opening with a tint of palest blush, dwarf habit, foliage like a Scotch briar.

Rose Bradwardine, beautiful clear rose, perfect in shape, very profuse, strong, robust habit.

CARNATIONS: A SPECIALITÉ.

LADY NORA FITZHERBERT (New 1903).

Awarded 1st Class Certificate by the Royal Caledonian Horticultural Society, September 1902.

WE have now been successful in getting up a stock of this remarkable new dwarf and stubby free-flowering Yellow Self Carnation. The following extracts from the Horticultural press fully describe what a valuable variety this is for either outside or inside decoration. And we may also add that a further important feature is the exceptionally long time the blooms last in good condition, either outside or inside. We offer a limited quantity at 3/6 each; 40/- per dozen.

Ex: "The Horticultural T. Journal," 24th September, 1902.

The annexed illustration is from a photograph of Carnation (Lady Nora Fitzherbert), as exhibited by Messrs Laing & Mather, Kelso, at the Royal Caledonian Horticultural Show in Edinburgh, on 10th and 11th inst. The variety may be taken as the forerunner of a new type. It is notable on account of its dwarf habit and floriferousness. It grows about 8 or 9 inches high, and as it is sturdy and compact *no stakes are required*. It should become popular for beds in the flower garden, or as a front row plant in borders or in carnation houses. The flowers are yellow, and produced in great profusion. It will be seen that some plants are in bloom, others in bud. Those in bloom were grown under glass, the others in the open; but even under glass it will be noticed the plants retain their dwarf character. Messrs Laing & Mather got it amongst their seedlings three years ago, and having grown it each year they have thoroughly proved its merits before sending it out. It was awarded a first class certificate, and found many admirers at the show.

☞ Upwards of 30,000 Carnations in variety are annually grown by us for distribution. In our Handbook "Carnations and their Culture"—which can be had post free on application—will be found a full detailed descriptive list of the best and most useful varieties.

Ex: "Journal of Horticulture," 11th December, 1902.

This new Carnation, which received a first-class certificate at the autumn show of the Royal Caledonian Horticultural Society in September last, is probably one of those which will give us a number of useful varieties on account of its floriferousness and the dwarf habit it possesses. It is, I believe, a seedling from Germania, a yellow which has not yet been superseded, and it has retained the fine colour and floriferous habit of its parent, with a new habit in the shape of dwarfness. It grows only some 8 in. or 9 in. high, and is so sturdy in its growth that it requires no staking. If Messrs Laing & Mather, of Kelso, who raised the plant, can only give us a number of varieties of the same habit we shall be greatly indebted to them. . . . With Lady Nora Fitzherbert, one might have a splendid bed or edging, while for a front row in the Carnation house we could hardly have anything better. The plants appear all that we can desire for vigour and for freedom in producing "grass."—S. ARNOTT.

PAGE 1.**SPECIAL
NOTICE.**

IN consequence of the exceptionally wet and sunless Season, Seeds generally have again been indifferently ripened and harvested, and many samples of Peas and Beans are somewhat stained.

We therefore beg our friends to unpack all Goods immediately on arrival, and to sow more thickly than usual.

BRAMBLES AND NEW HYBRID BERRIES.

Loganberry. This grand berry has now firmly established itself in the estimation of the fruit-preserving public, and well it may, for we know of no other berry of its kind possessing such remarkably fine qualities of productiveness and usefulness, and with such unique properties and adaptability for making a delicious preserve. The fruits are nearly black in colour, with a flavour "slightly more pungent and acid than a Blackberry," and with a faint Mulberry addition. It is of very robust growth, and the leafage of the plant is ornamental, either on walls, pailings, or trellises. The Loganberry can be grown similarly to Raspberries, though a lighter soil, or one of richer but more porous texture than Raspberries do well on, is helpful to its establishment. Rightly anticipating a growing demand for this berry, we have for years been improving and multiplying our stock, and this season are prepared to supply strong canes, 12/ and 15/; extra strong canes at 24/ to 30/ per doz.

Cumberland Black Cap Raspberry. Very hardy, producing large crops of fruit, about same time as ordinary Raspberries. 1/6 each; 12/ per dozen.

Japanese Golden May Berry. Berries of golden straw colour, very early, grows to about 6 to 8 ft. and bears year after year. 9d each; 8/ per dozen.

Japanese Wineberry, very hardy and vigorous, ripening from July onwards; a beautiful and profitable fruit for cooking or wine-making; it also makes a charming preserve. This ornamental fruiting plant when cut and bunched, with its effective bright green foliage, the reverse of the leaves being silvery grey, and its rich coloured berries, makes it extremely handsome for large vase decoration. For rough rock work, or for growing on old walls and arbours, the Wineberry is particularly adapted, lending itself readily towards ornamental effect. Plants, 1/ each; 9/ per doz.

Parsley-Leaved Bramble or Cut-Leaved Blackberry, the berry is large and luscious, of rich colour, and its foliage is very ornamental. Rambling in nature, very hardy, easily grown, but delighting in sun. Plants, 1/ each; 9/ per dozen.

Strawberry-Raspberry. Is hardy and a heavy yielder. The berries are round and very pretty. The flowers are white, resembling single roses. 9d each; 8/ per dozen.

CHERRIES.

And other sorts.

ORNAMENTAL CRAB APPLES.

These are grown mainly for ornament; the fruit is generally beautifully coloured, and highly-flavoured when ripe; much valued for Jellies, and when preserved whole is used for dessert.

Imperial , bright crimson red.	John Downie , conical, scarlet, tipped yellow, fine.	Scarlet Siberian , small, bright scarlet.	Transcendant , golden yellow, crimson next sun.
---------------------------------------	---	--	--

CURRANTS.

Victoria Black Currant, fruit of immense size, and a Black Currant of exceptional merit; vigorous in habit, and of unfailing productiveness. 8d each; 6/ per dozen.

Lee's Prolific Black, large, productive, and sweet

Black Naples, large and good

White Dutch, a well-known useful sort

Cherry Red, large berry, short bunches, early and good

Houghton Castle, Red, a fine late large kind

The "Comet" Red Currant (the largest and finest variety yet raised), for freedom and fruitfulness there is nothing to surpass this variety; the strongest grower we know of, with exceptionally late keeping qualities. Strong plants, 1/ each; 9/ per dozen.

GARDENING GUIDE FOR 1904.

DAMSONS (See also Plums).

Very valuable for dessert and preserves; free bearing, and when the trees are established, they require very little care or attention.

	Season.		Season.

STRONG PLANTING CANES 5/ to 7/6 each.	STRONG FRUITING CANES 7/6 to 15/ each.
---	--

NUTS AND FILBERTS.

To obtain good crops of Nuts and Filberts the trees should be pruned the same as Gooseberries and Currants, so as to admit plenty of air and light, which will cause them to bear abundantly; it is a good plan to plant them where they receive protection in severe weather by larger trees, and a dry situation is preferred.

STRAWBERRIES.

EARLY.

Black Prince, very early
The Laxton (new), early, large, and bright dark colour, 9/ per doz.
John Ruskin, early, glossy red
King of the Earlies, good quality
Noble, an excellent variety
Royal Sovereign, fine large, early
Garibaldi, free bearer

MEDIUM.

British Queen, large, highly flavoured
Commander, very prolific
Dr Hogg, large, fine flavoured
Sensation, excellent variety
President, large cropper, fine
Sir Joseph Paxton, good flavoured

LATE.

Eleanor, very large
Elton Pine, good bearer
Latest of All, large, good cropper
Waterloo, large, excellent variety

And many others.

PÆONIES.

Selections from these choice named Double Varieties, 18/ 24/, 36/, and 42/ Doz.

Selections from these choice named Single Varieties, 18/, 24/, 36/, and 42/ Doz.

Choice Mixed Seedlings (Stuart & Mein's Fine Hybridized), 12/ to 18/ Doz.

THESE bold, massive, gorgeous flowers have been vastly improved within recent years, and from their eye-striking effect, stand alone for planting in clumps, borders, and shrubberies. The flowers, which come freely, vary in shade of colour from the purest white through all the intervening shades of blush, pink, lemon, etc., to the deepest crimson and scarlet. All are remarkably handsome, many are sweetly scented, and they well deserve the attention caused by their attractive and noble heads of flowers and their light graceful foliage. They are also quite hardy, having withstood the severe winters in our exposed grounds. Pæonies may be planted with success at any time from September to March, and where they can remain without being disturbed, as their beauty and magnificence will increase year by year. They succeed well in any ordinary garden soil, a good deep cool loam being best; before planting the soil should be dug or trenched 18 to 24 inches deep, adding rich, well-rotted manure. A mulching on the surface of well-rotted manure each Autumn will also prove very beneficial. The crown of the plant should be placed about three inches below the surface of the soil. If planted in beds they should be placed three feet apart. They also produce a splendid effect if planted in groups on a lawn. Frequent waterings are not necessary, it is sufficient to give *copious* supplies when the ground is very dry, but it is chiefly during the great heat of the months of July and August that the plants should not suffer from dryness, as it is then they form the buds for the following season's blooms.

Gorgeous Double Herbaceous Varieties.

Achille, light flesh coloured.
 Alba imbricata, large, camellia shaped, ivory white.
 Agenoria, white, sulphur centre, red blotch.
 Antoine Poiteau, flesh colour, changing to white.
 Argus, bright rose, very fine and sweet scented.
 Armandine Mechin, large, brilliant amaranth.
 Auguste Lemoine, superb purple flower.
 Auguste Mieliez, soft pink, interspersed with yellow.
 Baron James de Rothschild, pink, semi-double.
 Bicolor, outer petals white, tinged crimson, cream centre.
 Boule de Neige, sulphur-white, carmine-tipped.
 Bremus, crimson, semi-double, very fine.
 Canarie, white, tinted primrose centre.
 Caroline Allaine, blush, sulphur centre, tipped white.
 Carnea maxima, pale rose, yellowish centre.
 Charles Binder, soft lilac, or silvery rose self.
 Clarissa, rosy pink, white centre.
 Cyclops, splendid purple crimson.
 Daphne, semi-double, purplish crimson, yellow anthers.
 Decour Voehille, cream-coloured, very fine.
 Delia, white, yellow centre, beautiful and fragrant.
 Doyen d'Enghein, pink, margined white.
 Duc de Cazes, bright red-carmine, edged rose salmon.
 Duchesse de Theba, pure white, tipped crimson.
 Duchesse de Nemours, large snow white, rose scented.
 Duchess of Teck, creamy white and bright pink.
 Duke of Wellington, soft white, pale creamy white centre.
 Eclair, bright lavender pink.
 Edouard Andre, glossy crimson, golden stamens.
 Elegans Superbissima, fresh pink guard petals.
 Emile Lemoine, red-purple, semi-double.
 Faust, guard petals soft lilac blush, centre salmon yellow.
 Felix Crousse, large brilliant crimson.
 Festiva Maxima, pure white, slightly tipped purple.
 Flavescens, yellowish.
 Formosa, white, slightly tinged blush centre.
 Fulgida, crimson purple, large.
 Globosa, blush pink, chamois centre.
 Gordius, fine rosy lilac.
 Grandiflora carnea plena, flesh colour, sulphur centre.
 Grandiflora nivea, flesh, fading to pure white.
 Henri Demay, brilliant purplish crimson, semi-double.
 Henri IV., rose, full double, strongly fragrant.
 Herbita, rose guard petals, rose petaloid.
 Hortense, satin rose, centre salmon and rose, sweet scented.
 Humei, pure white, very fine.
 Humea carnea, peach blossom, centre blush.
 Isoline, rose and white.
 Jeanne d'Arc, rosy pink, white centre.

Jules Calot, rich rosy crimson, large fringed flower.
 Labolas, purple rose petals tipped yellow.
 La Reine, flesh, with white centre.
 Lady Anna, flesh and sulphur.
 Lady Bramwell, silvery rose, fragrant.
 Lady Carrington, flesh, very fine, and sweet smelling.
 Lady Derby, flesh coloured.
 Louis Van Houtte, a very fine semi-double crimson.
 Madame Calot, white tipped carmine, sulphur centre.

Jura, white, margined rose.
Milton, crimson-carmine, of fine form.
Prince Bismarck, rich crimson.
Princess of Wales, beautiful blush pink.
Queen of May, lovely rose pink.
Rhetico, rosy blush white.
Surprise, handsome bright crimson.
The Moor, rich glowing maroon-crimson.
Trophy, large purple coloured.
Venus, bright rose, edged and frilled silvery white.

Tree Pæonies—Selections of Choice Named Varieties, 42/ to 84/ doz.

DAHLIAS. **CACTUS DAHLIAS FOR 1904.**

Each 7/6.

Dainty. The colour is most pleasing and absolutely distinct. It is a pale yellow ground overlaid with light pink; the tips of the petals golden.

Dorothy Vernon. An art shade, pale crushed strawberry. A free blooming elegant variety. Very refined quality.

Effective. This is also quite a new colour in Dahlias; it is a deep amber, with rose coloured centre. We recommend it as the most effective variety known. It is even better in habit than the well-known "Britannia," and if it is possible more floriferous.

Gladiator, orange red, base of florets yellow, 3½ ft.

Harbour Light. The colour is vivid, orange red, overlaid at the tips with flame colour. It has the peculiarity of producing blooms paler in colour than those described as well as the more intensely coloured, but they are equally charming.

J. B. Bryant, yellow, a flower of great size, 4 ft.

Lizzie Hammond, fawn, suffused with deep salmon, 4 ft.

Northern Star. A huge deep crimson variety of good form and habit.

Mr Amos Perry. A vivid velvety-crimson variety, of good form and substance. We staged this in first-rate form throughout the Dahlia season, and the public and Press were loud in its praise. It is a bold variety, and one that we have no hesitation in recommending as a garden variety par excellence.

Pink Pearl, pretty shade of pink, central florets nearly white, 4 ft.

Reliable, brick red, with yellow base and suffused with salmon, 4 ft.

Sceptre, golden yellow, gradually deepening to pink at the tips, 4 ft.

Sweetheart, rosy salmon pink, stems long, 4 ft.

Sweet Nell. A deep pink bold flower; the central floret paler than the outer. A very distinct kind. Good pink coloured flowers were much wanted in Dahlias.

Yellow Gem. A delicate lemon yellow of good quality and shape. It is most effective, being very free flowering, and of good habit of growth.

CACTUS DAHLIAS INTRODUCED 1903.

Each 1/6 to 2/6.

Fred Cobbold, regarded as a distinct advance on "Red Rover" in colour and form.

Hetty Dean, a lively amber, overlaid with orange, with a suspension of rose in flakes towards the extremities of the petals; First Class Certificate, Shrewsbury, Sandy and Bath.

Maid of Honour, a pleasing shade of pink with lighter centre, of good cactus form and quite distinct from any.

Mrs Dustan, pale yellow centre, passing to the outside of the petals to a pleasing shade of bronze, erect and free flowering.

Princess, colour deep lilac pink, petals long and narrow, beautifully incurved; flowers of good size; Certificate N.D.S.

Prince of Orange, yellow shading to old gold, straight narrow petals, bright and distinct and free flowering; Certificate, N.D.S.

Red Cap, this is unquestionably the best quality bloom in the red section; the petals are very fine and the form is all that can be desired; First Class Certificate London Dahlia Show.

The King, very rich bright glowing crimson of good cactus form, and quite distinct from all others in this colour.

Winsome. This is the first pure white incurved Cactus Dahlia. The petals are long and the footstalk is bold to a degree. Was awarded First Class Certificates at the National Dahlia Society, Shrewsbury Flower Fete, Bath Horticultural Society, Sandy Horticultural Society, and an award of merit at the Royal Horticultural Society.

BOUQUET OR POMPONE DAHLIAS.

S. & M.'s Selection, 4/ to 12/ per Dozen.

Arthur West, red, shaded crimson; 2 ft.
 Bacchus, bright crimson scarlet; 3 ft.
 Catherine, yellow, very neat; 3 ft.
 Clarissa, pale primrose; 3 ft.
 Dora, white, shaded cream; 3 ft.
 Eli Millard, white, flushed pale rosy pink; 4 ft.
 Golden Queen clear yellow, good form; 3 ft.
 Guiding Star, white, quilled petals; 4 ft.
 Jewel, pure primrose, sometimes white; 3 ft.

Hedwig Polwig, orange scar., tipped white; 3 ft.
 Juno, French white, tinted purple; 3 ft.
 Lilian, primrose, edged peach; 3 ft.
 Little Bobby, rich crimson, small flowers; 3 ft.
 Little Frank, amber, deepening to salmon; 3 ft.
 Little Wonder, bright scarlet.
 Model, fawn, shaded pink; 3 ft.
 Purity, pure white, distinct; 3 ft.
 Ringdove, terra cotta; free; 3 ft.

Rosetta, purplish magenta; 3 ft.
 Tommy Keith, crimson, tipped white; 3 ft.
 Vivid, bright orange scarlet; 3 ft.
 White Aster, very free; 3 ft.
 White Button.

And many other sorts.

CACTUS DAHLIAS.

SELECTED VARIETIES OF RECENT INTRODUCTION.

S. & M.'s Selection, 4/ to 8/ and 12/ per Dozen.

Alfred Vasey, red, reflected amber pink; 3 ft.
 Arab, a rich velvety maroon, almost black.
 The florets are very long, straight, narrow, and admirably arranged; stems long, black, wire-like, and rigid; 4 ft.
 Arachne, white, edged crimson, 4 ft.
 Artus, dark apricot, shading to orange-buff.
 Bessie Mitchell, yellowish orange, shaded salmon, and pinkish-red.
 Britannia, soft salmon pink; 3 ft.
 Capstan, soft brick red, apricot tint; 3 to 4 ft.
 Captain Broad, bright fiery crimson; 3 ft.
 Cinnamon, a clear, bright cinnamon or yellowish buff, darker in the centre, the best of this colour; stems long, black, and stiff; 4 ft.
 Clarence Webb, a beautiful bronze-red, passing to golden yellow at the base and in the interior of the flower, a gem for exhibition; flowers large, bold, and always reliable; 4 ft.
 Columbia. The ground colour is bright vermilion, the centre and tip of every floret pure white; floret long, straight, narrow, and pointed; stems long; 4 ft.
 Cornucopia, deep reddish salmon, fine; 4 ft.
 Countess of Lonsdale, rich salmon red; 3 ft.
 Cycle, ruby red, long stems; 4 ft.
 Daffodil, canary yellow; 3 ft.
 Dr Douglas, deep crimson, scarlet, with long narrow twisted petals.
 Dr Jameson, velvety maroon, beautifully curled and curved; 4 ft.
 Dinorah, orange or reddish buff, a large bold flower; 3 ft.
 Eileen Palliser, large golden yellow, 4 ft.
 Elsie, lilac rose, base orange yellow; 4 ft.
 Emperor, soft rosy purple; 4 ft.
 Ethel, pale yellow, passing to deeper shade; 4 ft.
 Exhibitor, soft pink or peach; 4 ft.

Exquisite, reddish cinnamon; 3 ft.
 Firebrand, velvety crimson; 3 ft.
 Fusilier, salmon or coral pink; 4 ft.
 Fighting Mac, a rich fiery crimson, with just a suspicion of cinnamon at the base of the petals; 4½ ft.
 Flamingo, clear flame colour, immense flower, and good form.
 General Buller, rich velvety crimson, nearly black at the base, but passing to white at the tips, perfectly distinct variety; stems long and erect; free flowering; 4½ ft.
 Gloriosa, crimson, long petal; 4 ft.
 Green's White, pure white, pea green tint; 4 ft.
 Harry Stredwick, rich fiery crimson; 4 ft.
 Innovation, rich crimson, tipped white; 4 ft.
 J. W. Wilkinson, a pleasing tint of deep reddish plum colour; 3 ft.
 Keynes' White, ivory white; 4 ft.
 Kingfisher, bright carmine; 4 ft.
 Lady Penzance, purest yellow; 3 ft.
 Laverstock Beauty, vermilion; 4 ft.
 Liberty, brilliant crimson, very fine petals, grand form.
 Lodestone, orange scarlet, fluted petals; 5 ft.
 Loyalty, bright coral red, distinct; 4½ ft.
 Mary Service, pinkish heliotrope; 4 ft.
 Matchless, rich velvety maroon; 3 ft.
 Miss Grace Cooke, heliotrope and mauve, shadings on the upper petals, inner petals a lighter shade.
 M. S. Walsh, lemon, shaded chrome; 4 ft.
 Mayor Tuppeney, yellow, edged pink; 3½ ft.
 Monarch, large orange, red-tipped magenta; 3 ft.
 Mrs Carter Page, rich velvety crimson; 4 ft.
 Mrs Dickson, rose, passing to yellow; 4 ft.
 Mrs Gordon Sloane, terra cotta; 4 ft.
 Mrs J. P. Clark, a soft tint of reddish buff, the point of every floret rosy peach, passing to pure white at the tip; stems long; 4 ft.

Mrs J. J. Crowe, canary yellow; 4 ft.
 Octopus, French white, large flower; 3 ft.
 Ophir, a soft apricot, slightly paler in the centre; florets are long, narrow, and have scarcely any tendency to curve; free flowering; 4 ft.
 Primrose Dame, yellow, fine; 4 ft.
 Princess Ena, yellowish orange in the centre, reddish orange towards the outside, petals twisted; 3 ft.
 Progenitor, bright carmine lake; 4 ft.
 Prince of Yellows, bright rich yellow, florets long, curving; 4 ft.
 Queen of Hearts, claret colour, very fine petals.
 Radiance, orange scarlet; 2½ ft.
 Ringdove, a lovely tint of pinkish fawn, gradually passing to white at the tips; florets long, straight, and very narrow; stems long and moderately stiff; 4 ft.
 Ruby, ruby red; 3 ft.
 Rosine, a beautiful tint of soft carmine pink; 3 ft.
 Sailor Prince, the finest seedling of the year; has been awarded several certificates; the best dark crimson colour extant.
 Sparkler, bright crimson; 3 ft.
 Standard Bearer, fiery scarlet; 5 ft.
 Stella, vivid crimson, free; 4 ft.
 The Clown, soft red, tipped white; 4 ft.
 The Queen, white, free flowering; 4 ft.
 Uncle Tom, dark crimson maroon; 3 ft.
 Up-to-Date, crimson pink, tinged purple; 4 ft.
 Viscountess Sherbrooke, red terra cotta; 3 ft.
 Vesta, beautiful pink colour, paler centre.
 Village Maid, creamy yellow, edged and overlaid with carmine-crimson.
 Wallace, bright amber and soft red; 4 ft.
 Wisdom, soft shade rosy pink; 4 ft.
 Wm. Cuthbertson, crimson lake; 4 ft.

And many other Varieties.

Stuart & Mein's Selection, 6/ per doz.; Customers' Selection, 6/, 9/, and 12/ per doz.

ROCKERY AND ALPINE PLANTS.

PROBABLY no class of plant is so widely admired as those which are hardy and admit of general cultivation in this country. From the very large family of Alpine and Rock Plants we have only selected those sorts specially adapted for freeness in flowering and for an effective display on rock work, beds, old walls, or any rustic place that lends itself to the purpose.

For the guidance of those not well acquainted with these plants, we offer collections, our selection, as follows:—

5/, 6/, 8/, and 12/ per dozen; well assorted variety. 35/, 50/, 60/, and 75/ per 100 according to variety and size of plants.

CATALOGUE ON APPLICATION.

BORDER AND BEDDING PLANTS.

Antirrhinums—Choice Named Varieties, per doz. 6/ to 12/
Choice Seedlings, from named collection, .. per doz. 2/

Asters—Finest Mixed per doz. 6d
In Colours per doz. 6d

Begonias—Choice Tuberous-rooted, grand selection for conservatory or bedding purposes. *For Particulars see Page 35.*

Cannas—New Large Flowering Dwarf. We have a fine collection of these, suitable either for conservatory decoration or bedding out, &c. per doz. 12/ to 48/

Carnations and Picotees—A very extensive collection. *Carnation Catalogue on Application.*

Chrysanthemums—Autumn and Winter Flowering, per doz. 6/ to 30/
New Summer Flowering. See page 48. per doz., 6/, 9/, and 12/

SAYNOR'S WARRANTED KNIVES AND TOOLS.

HORTICULTURAL MANURES.

MEIN'S SPECIAL PLANT MANURE.

AN IDEAL STIMULANT AND PLANT FOOD.

This manure has been scientifically compounded with a two-fold object in view. It is, of course, not only necessary to incite growth in a plant, but it is equally necessary to provide food for it during growth. Our Manure fully meets these requirements. Its action upon plant life is that of a true stimulant, certain properties of the Manure taking immediate effect, whilst the other ingredients employed in the preparation are designed to impart gradually the requisite food for the plant during growth. Whilst our Manure is thoroughly well adapted to the wants of a very wide range of plant life, yet it is specially so in the case of Tomatoes, Vines, Fruit Trees, Roses. The Manure is free from offensive smell, thereby allowing it to be used in dwelling-houses or Conservatories, and is put up in quantities convenient for the requirements of all.

Full particulars, and guaranteed Chemical Analysis with each purchase.

HIGHEST AWARD,

LONDON, 1892.

WEED DESTROYERS.

For Destroying Weeds, Moss, Dandelions, &c., on Garden Walks, Carriage Drives, Stables, and Court Yards, &c.

They are thoroughly effectual, permanently destroying all kinds of Weeds, and rendering the ground unfavourable for their future growth. Easy of application, and highly concentrated. Being a liquid, it merely requires to be added to the proportionate quantity of water, as recommended by the different makers, and applied by means of an ordinary watering can.

HIGHEST AWARD,

LONDON, 1892.

of **STRONG GALVANISED WIRE.**

4 feet high; 12 in. diameter.
This article is coming fast into favour, so many lovers of Sweet Peas desiring to grow the various sorts apart. 2/- each; 22/- per doz.

NEW PATENT CELERY CLASP (LAIDLAW'S.)

A very simple but ingenious article, the use of which will effect a **great saving of labour**. The clasp is made of spring metal, about half-an-inch broad, and is used for claspings the celery plant when earthing up. The fastening is effected by a stud on one end, being adjusted into a small notch on the other. The purpose of the clasp is to avoid the tedious labour of tying, it being done in a fraction of the time. It is not necessary to clasp the whole row at once. One or two dozen may be earthed up at a time, and when these are finished the clasps are drawn upward off the plants, unfastened, and applied to the remainder.

Per Dozen, 2/6; Sample Clasp, 4d Each, Post Free.

GALVANISED HANGING BASKETS.

CIRCULAR PLANT GUARD AND TRAINER.

No. 6.

THE NEW COIL WIRE STAKE.

Specially adapted for Carnations and similar Flowers.

This New Stake since its introduction has gained everywhere in popular favour, and is now extensively used. The construction of the coiling is such as to hold and support the flower stems WITHOUT TYING. Its advantages are:

A Great Saving of Labour.

Cheapness (in that the Stake is practically indestructible).

Smart and Tidy in Appearance.

Though mainly used for Carnations, it is also utilised for staking many other plants.
