Hydrangea Quercifolia (Oak-leaved hydrangea). I regard this as one of the most valuable of all the hydrangea family. The leaves resemble in shape those of the White Oak. They are of dark green during the summer, and the foliage completely hides the branches. It is one of the first shrubs to show the deep autumnal tints, the leaves being very persistent, remaining on the branches until November. The flowers are inconspicuous.

Ligustrum Ibota Regelianum—

A variety of the Ibota, which during the trying winter of 1903-4 demonstrated its hardiness. In habit of growth it is semi-weeping. It forms a handsome specimen shrub, showy alike in flowers and fruit, and is equally adapted for an ornamental hedge, requiring almost no trimming.

EVERGREEN TREES.

I have for the past five years been devoting an increasing attention to this department. By root pruning annually and transplanting every two or three years, as well as by the systematic pruning of the branches and the giving of sufficient space to each plant to develop it symmetrically, I am able to offer blocks that cannot be excelled in quality. I now have fifteen acres devoted to this department, and this acreage will be nearly doubled the coming season. I extend a cordial invitation of inspection.

RETINOSPORA PLUMOSA AUREA

The Retinosporas and most of the Spruces, Arbor Vitae, Hemlocks and Pines are suitable for placing in tubs and vases, or wherever perfectly shaped specimens are required.
