To Our Customers.

WE have the pleasure of presenting you our Seed and Implement Catalogue for 1910. If you have no use for it, we shall esteem it a favor if you will kindly hand it to some friend to whom it may be of service.

Our SEED DEPARTMENT is under our personal supervision. No pains or expense have been spared to secure the very best Seeds from reliable growers.

TERMS, &c.

The prices on all Machines and Tools found in this Catalogue are net; 5% will be allowed for spot cash with order. All orders from unknown parties should be accompanied by remittance, or reference to some responsible house in this city.

TO MAIL CORRESPONDENTS. *We pay the postage* on Seeds in packets, ounce and quarter-pound papers to any part of the United States; On Seeds purchased in large quantities, *add postage* at the rate of eight cents per pound.

Parties ordering Seeds by mail will please write their name and post-office address distinctly. Remit by Express Money Order, Draft, Post Office Order or Registered Letter.

All orders by mail will receive prompt attention. Correspondence cheerfully answered.

PRICES OF BAGS.

Quarter Bushel,	\$o 12	One Bushel,	\$o 17
Half Bushel,	15	Two Bushel (Seamless),	23

Bags used in packing Seeds will be charged at cost, if returned in good order within fifteen days from date of invoice. Return charges must be pre-paid.

WARRANTIES.

Irreproachable Seeds sometimes fail to germinate through many causes, one of the most common being heavy rains after sowing, and the consequent baking of the ground afterward. The germination of seeds underground is caused and maintained by the formation of gases in the seed, which, in truth, consumes the seed and nourish the sprouts until these are above ground, when the sun and air supplies the necessary nutriment, a process which fails in case: of too deep sowing, or the ground forming a hard crust on the top, the seed is consumed before its sprouts have reached the surface of the ground; besides, an untimely frost, or a very cold current of air passing over the shoots immediately on their appearance above ground, may destroy the whole process of vegetation; or want of moisture in the soil may prevent the seed from germinating at all. Then again, vermin, cutworms and other insects scarcely visible, may destroy a crop, unknown to the planter. And, finally, there are sometimes causes at work changing the habits and character of plants, which escape the closest observation, owing to conditions of temperature, and which are but little understood.

For the above reasons, we wish to state in this explicit form, that we give no warranty, express or implied, as to description, quality, productiveness, or any other matter of any seeds, bulbs, or plants we send out, and we will not be in any way responsible for the crop. If the purchaser does not accept the goods on these terms, they are at once to be returned.

NEW HIGH LIFT SINGLE SULKY.

While under ordinary conditions the width of furrow is regulated by the clevis, with the Syracuse by means of our ratchet foot lever on pole, the operator can change the width of furrow at will, can plow around curves or obtain the full width of furrow in plowing sidehill land. This feature is found in no other plow.

We furnish bottoms in four sizes. They are what are commonly styled Combination Bottoms and have hardened soft centre steel moldboards, solid steel landsides, cast shares and shoes.

STEEL SHOVEL PLOW, WITH POTATO DIGGER ATTACHMENT.

This plow is used for furrowing, covering, cultivating and hilling Corn, Carrots, Potatoes, and also for digging Potatoes; the wings can be adjusted to any width of row from two to four feet; it is adapted to all kinds of soil; can be used with perfect success on very rough, stony ground; one of the most valuable implements in use.

Price of Plow..... Net \$5.50

It can also be changed to work in narrow rows for cultivating Beets, Carrots, and all other Root Crops, etc., at an additional expense of \$1.75 net.

Potato Digger Attachment..... \$2.00 net.

CONTRACTORS' PLOW.

Hard iron wearing parts. Extra heavy beam, share and strip. Steel wheel standard. Will turn a furrow 5 to 9 in. deep, and 12 to 15 in. wide. An excellent plow for general grading purposes. No. 1 Contractors', two or four horse, weight with wheel, 172 lbs. \$15.00 net. No. 2 turns a 10 to 13 inch furrow, weighs 130 lbs., net \$11.00.

HARD PAN PLOW, OR POWER PICK.

Adjustable and double reversible bar steel point. Adjustable shoe in place of wheel. Loop handle wear irons. Strongly built throughout. Especially adapted for tearing up cobblestones or McAdam pavement. Four or six horse. Weight, 256 lbs. A great favorite with contractors. Price, \$24.00 net.

The prices on all machines and tools in this catalogue are net; 5 per cent. will be allowed for cash with order.

ONE HORSE PATENT SPRINKLER

with valves adjustable for sprinkling lawns, grounds, flower beds, shade trees, etc. Can be easily adjusted to apply the stream direct on one or

two rows at a time, is also a good sprinkler for **SPREADING LIQUID MANURE**. Capacity 150 gallons, wheels 4 ft. 6 ins. in diameter with 4 inch tires..... Net \$90.00
Prices on Two Horse Sprinklers on application.

HORSE LAWN SWEEPER.

A revolving brush in front sweeps the sod clean and throws the sweepings backward into a large box in the rear. This box can be dumped without stopping. Sweeps forty inches wide.

The sweeper gives you a perfect lawn as soon as the sweeping is finished, instead of looking gray for several days owing to the withered cut grass. If the sweeper and lawn mower are run in opposite directions, the lawn will be the same shade of color all over.

Price, \$65.00 net.

THE APOLLO LAWN SWEEPER

It gathers up cut grass leaves, small stones, sticks, etc., and throws them out into a large box. Can be set to rake low or high. Sweeps 20 inches wide and

leaves the lawn in beautiful condition.

20 in. sweep, \$11.70 net. 28 in. sweep, \$13.50 net.

IMPROVED MOTOR MOWER AND ROLLER.

FOR LAWNS, PARKS AND GOLF GROUNDS

Besides economy, it has other advantages over the Horse Lawn Mower.

Reeves' Improved Potato Planter

Will plant whole or cut potatoes any depth, drops them in rows 15, 19, 23 and 30 inches apart. The potato is partially covered with earth when the fertilizer is dropped, therefore it does not come in contact with the seed; the discs cover both potatoes and fertilizer any depth desired.

This Planter will sow from 150 to 1,150 pounds of fertilizer per acre.

No. 8. One horse Planter with Fertilizer Attachment, net \$50.00.

No. 10. Two horse Planter with Fertilizer Attachment, net \$63.00.

No. 12. Two Row Planter with Fertilizer Attachment, net \$95.00.

Potato Hiller and Coverer.

Also successfully used in hilling Celery and Asparagus, etc. There are hundreds of them in use in the potato growing districts. Net price, \$10.00.

Disc Hoe and Coverer.

Handles and Discs are adjustable for covering and filling Rowed Crops as fast as the team can walk. Has two 16 inch. Steel Discs.

Net.....\$10.50

Whiffletrees and Neck Yoke, extra....\$3.00

The "Success," Jr. Potato Digger.

This Digger has made a splendid record in many trials with high-priced diggers. It has been adjudged the superior digger. It is light in draft, light to operate, but heavy in merit.

Net Price.....\$10.50

Gilt Edge Potato Harvester.

Ordinary draft for one team. Very easy to handle, in fact, if you are a little inclined to be lazy, do as one man in Colorado did, bolted his plow seat on and had a riding digger. Very simple in construction, very strong and durable, built to stand, not to wear out. Easily regulated for any depths. The 12 tine forks, 24 inches wide, kept in rapid motion, thoroughly separates the potatoes, little and big, from the soil, leaving them in just as good shape for picking as if dug by hand. Net, \$35.00.

Roy Potato Harvester.

The elevator apron is constructed of patent steel finger bars so arranged

as to open up very wide on the under side on its return, allowing the earth and small stones to fall through to the ground, making it impossible for the apron to carry back anything to clog or stop the harvester, a very objectionable feature found in all other machines.

To be worked by three horses, Net price, \$100.00

Potato Sorter and Sprouter.

Two men and a boy can sort and put into the wagon from 80 to 100 bushels an hour. It can be operated by one person if necessary. As you see, the potatoes pass from the hopper into the cylinder, which should be turned very slow. Pick out the decayed or scabby potatoes as they pass through the hopper. If the potatoes need sprouting, raise the lower end of the machine or turn the cylinder half way over, and then back, or both. The small potatoes, dirt, straw, etc., will fall under the sorter into the basket, while the merchantable ones will be delivered into baskets as shown, or they may be run on an incline into the cellar. To sort seed potatoes from the small ones, just wind the cylinder with binder twine the proper mesh, and the result will surprise you. Net, \$17.00.

Each machine is furnished with 4 tubes, 6 nozzles, 2 straps and oil can; will dust two rows of potatoes at a time.

Weights about 6 lbs.

Price.....\$7.50.

Little Giant Dusters.

Will dust two rows at a time. Each machine furnished with two tubes, five nozzles and strap. Price, \$5.50.

Two-horse style. Standard track, wide 5 feet; narrow 4 feet 8 inches center to center of tires on ground. Bolsters 42 inches between stakes on wide track and 38½ inches on narrow track. Price includes pole and wrench only.

No. 1½ Cider and Wine Power Press.

Capacity, fifty to sixty Barrels of Cider in ten hours, with four to six Horse Power.

This press is designed as a first-class custom mill outfit; has overhead power attachment, with fast, medium and slow speeds; is shown with double custom platform; can be fitted with reversible platform; has improved pressure alarm and self-adjusting, anti-friction washers.

For the ordinary run of custom cider mills this press has no superior for good, fast and satisfactory work.

THE REEVES MILL FOR GENERAL GRINDING

Will grind ear corn and all small grain into a splendid evenly mixed food. It is made of all iron and has improved ball-bearing socket at end of shaft; has wood safety pins, which insure the mill against damage in case any heavy, hard substance should get into the plates. The tension on the plates can be adjusted to grind fine or coarse while mill is in motion.

We fully guarantee this machine and request you to give it a trial.

No. 5 Mill.

Ball Bearing used at end of Spindle in all sizes of Mills.

No. 6 1/2.

No. 5 GRINDING MILL. FOR HAND AND POWER.

With Double Reduction Grinding Cones.

No. 5 cut shows hand and power mill with a spindle containing saw cob-crusher and the two grinding rings by its side.

No. 5 Mill, including extra set of Cones, \$16.00, net. Cones, per pair, \$1.50.

Pulley, 20 x 3. Speed, 50 to 400. 1 to 2 horse power. 1 to 10 bushels per hour. Weight, 100 pounds.

This hand mill has our Saw Crusher, double reduction dress on face of Grinding Cones, ball box bearing end of Spindle. It has a pulley fly-wheel with handle.

If it feeds too fast for power employed reduce the speed of mill until it will drive at proper speed. It is well adapted for light wind powers.

Will grind corn and cobs one ear at a time to fine feed meal, also all shelled grain, bones (after they have been boiled twenty-four hours—not green bones), oyster shells, crackers, dried bread, spices, coffee, etc.

No. 6 1/2.

TIME IS MONEY. This mill is designed for grocery stores, small manufacturers and small farmers who desire to use one or two-man power or one horse steam, electric, water or wind power. It is constructed so as to enable a man to use all of his power, which enables him to grind a pound of coffee in one-third of the time required to do the same work on other mills, which are constructed to work on a fast speed, where three revolutions are required to do the same work that this mill will do in one revolution. It will grind all the substances that the No. 4 will do, but much faster. It is recommended for suburban residents for grinding feed for stock and poultry and cereals for the family. A few turns of the adjusting-screw will change it from cracking walnuts to pulverizing coffee.

Peanut Butter is a growing industry. A good business can be established in any community by those who are seeking profitable employment in this line. Graham flour, raw and parched corn meal and cracked oats find a ready market. All this work can be done on this mill at a speed in proportion to the power used. All our mills have ball bearings, which prevent friction at the adjusting screw.

Height, 5 feet. 3 feet square. Weight, 150 pounds.

Price of G 6 1/2 Mill, with legs, \$28.00, net. Will grind 1 to 3 lbs. of Coffee per minute.

Price of G 6 1/2 Mill, for counter, \$20.00, net. Will grind 1 to 3 lbs. of Coffee per minute. Tight and Loose Pulley, extra, \$5.00, net.

Price of A 10 Mill, for Grinding Peanuts, \$60.00; 100 pounds per hour with two-horse power; 200 pounds per hour with four-horse power.

The prices on all machines and tools in this catalogue are net; 5 per cent. will be allowed for cash with order.

THE TRIUMPH HAY PRESS.

The Triumph Press is designed for the individual farmer, or for one or two farmers together, and not as a "business" press. It can be operated in limited space—on the barn floor often.

The Triumph can be used by two men, with either one or two horses; a straight pull of nine feet compresses a charge, and springs return the plunger to its original position, bringing back the whiffletree, keeping the traces tight and guiding the team in backing.

NET PRICES

14x18 Chamber, \$100.00; weight, 650 lbs. 17x21 Chamber, \$110; weight, 770 lbs.

The daily capacity of the Triumph ranges from four to eight tons of hay a day of ten hours. The amount will depend, of course, on the workmen and other conditions. The press is capable of putting up even more than this, but we would prefer to make conservative estimates rather than those that might seem to be overdrawn.

The Triumph is made in two sizes.

The small size chamber will make bales weighing from sixty to one hundred pounds; the large size will make them as heavy as 125 pounds.

Columbia Belt Power Press

Holds the World's Record for FAST BALING AND LOW REPAIR BILLS. Requires from eight to ten horse power. Size 17 by 22 has baled 50 tons of hay in 10 hrs. Size 14 x 18 has baled 38 tons in one day. The 17 by 22 will make a bale of hay weighing from 80 to 175 pounds, and 14 x 18 a bale from 75 to 140 pounds, according to the amount of tension on bale chamber and quality of hay.

Reeves' Hand Baling Press.

PRESS CLOSED.

Makes a vertical bale, 17 x 21 inches x 2½ feet long. The lever which operates the plunger is 8 feet long, and through the compounding principle, 100 pounds on the end of a lever gives several tons pressure on the plunger. The material to be baled is placed in the press when the plunger is up, the plunger is then released, and falls upon the loose material, and is compressed by the use of the lever. By repeating this operation a solid, compact bale is

made, and is held together by two or three ten-foot baling ties.

It will make a bale of Hay weighing from

80 to 100 pounds.

It will make a bale of Hair weighing from

100 to 250 pounds.

It will make a bale of Moss weighing from

150 to 175 pounds.

It will make a bale of Wool weighing from

225 to 270 pounds.

It will make a bale of Rags weighing from

225 to 275 pounds.

Price, \$65.00, net.

PROFIT FARM BOILER.

THE CALDRON DUMPS.

The Profit Farm Boiler, a simple Furnace with a Caldron which dumps. The contents can be emptied in one minute, doing away with dipping it out. It is thoroughly constructed of the best cast-iron. When Kettle is dumped, all the Flues are exposed.

DIRECTIONS FOR COOKING FOOD FOR STOCK.
Fill the Kettle before lighting fire, and put in plenty of water to prevent the feed from burning on bottom of Kettle. Always see that the Dampers are open and the ashes are clear from the Grate. Keep the bottom of the Kettle clean, and the Flues free from soot. In emptying Kettle you need not let fire go down; simply dump Kettle and have water ready to throw in at once.

Cast Iron Fire Pot for Coal..... 4 00

REEVES' STEAM FEED COOKER AND STEAM GENERATOR.

Burns coal, wood or cobs. Every farmer needs one.

This steamer is small and compact, requires but little room, cooks by steam all kinds of grain, vegetables, corn on the ear, hay, straw, and corn stalks, heats water for any purpose, cheese vats, scalding hogs, laundries, etc. Cleanses quickly and perfectly milk cans, pails, tubs and barrels, and banishes the old arch-kettle, with slow work and the waste

of fuel; can be run and cared for easily, and will generate more steam with the same amount of fuel than any other in use. It is simple, strong, safe, durable, economical, cheap, and will do all that is claimed for it. It is made from boiler iron and has regular lap-welded boiler flues, making it durable, rigid and strong in all parts and will last, with ordinary care, a lifetime. They are well riveted and caulked and are capable of standing a hydraulic pressure of 150 lbs. to the square inch, and are perfectly safe carrying 100 lbs. pressure.

Size No. 2, diameter of shell, 19 in.; height of shell, 44 in.; number of 2-in. flues, 13; length of boiler over all, 58 in.; shipping weight, 370 lbs.

Price.....\$40.00.

SANITARY TUBULAR STEEL STALLS AND STANCHIONS.

Note how neat and symmetrical and clean looking it appears with nothing to interfere with light and ventilation.

The regular section consists of one partition, one upright post, 3 to 3½ feet top of rail, as specified, two T couplings and one Tubular Stanchion with regular top and bottom fastenings. The end section consists of one partition, one post, one T coupling and one corner coupling.

When the stall joins another section or is attached to a wall, the end section is not needed. For concrete floors, the lower ends of partition and post are made five inches longer and are flared to hold the concrete. Floor plates are furnished for wood floor.

Price of Stall and Stanchion as above described for concrete floor, net \$8.00 each; for wood floor, \$8.40 each. Price of Tubular Steel Stanchion only, \$1.60 each.

Cut Shows How Rope and Pulleys Are Adjusted.

The above cut shows hay being taken in where driveway is in center of barn and hay mow on either side. When asking for estimates on outfits kindly state size of barn, distance rafters are apart, and whether delivery is to be made in center or at one end, or outside of barn. Our line of Haying tools is complete and we would like to name you price on your entire outfit.

New Model Double Trolley Litter Carrier

CAR—Consists of double swivel trolleys at each end, and is held together by a 1½-inch angle iron beam which forms another swivel, making three swivels at each end of the car, allowing the double trolleys their freedom to follow any curve desired.

PAN—Is made of heavy galvanized iron flaring at all four sides, water-tight; supported at each end by a bracket which supports bottom of pan and forms an axle at each end, which is also braced to the top of the pan, which strengthens it. The pan is held in place by means of a weighted latch which holds it in position for loading, and does not allow it to dump until tripped, thus giving it free revolution.

GEARS—Used to raise and lower the pan; contains one large cog wheel and a small one, to which the crank is attached. This crank turns the wheel attached to the winding shaft on which the chain is wound in the center. The chain runs over swivel pulley and then down to the main stock, giving a raising leverage of great power, excelling all other carriers on the market. The pan is raised to the car, after which the pall is released from the ratchet; at the same time puts on large gear wheel and lets the pan down to the floor slowly, or stops it. Capacity, 700 to 1,000 pounds. Size of pan, 32 in. wide, 45 in. long, 12 in. deep.

Hay Caps.

Chemically treated to prevent mildew. For protecting Hay from rains after it is cured and before it can be stored in the barn. Order early to insure delivery.

Size, 5 feet by 5 feet.
Net, \$1.00 each.

The prices on all machines and tools in this catalogue are net; 5 per cent. will be allowed for cash with order.

FINISHED ROUND SILOS.

COMPLETE, READY FOR SETTING UP AND FILLING.

DOES A SILO PAY?

15 tons of ensilage. According to Wisconsin Experiment Station analyses a ton and a half of Timothy hay and fifteen tons of ensilage will give the following:

		Digestible Nutrients.		
Timothy hay 1 acre	Dry matter 2604 lbs.	Protein 84 lbs.	Carbohydrates 1302 lbs.	Ether extract 42 lbs.
Corn ensilage 1 acre	7920 lbs.	390 lbs.	12120 lbs.	210 lbs.

Let us know how many cows you wish to provide for and we will be more than pleased to quote you on not only a suitable size Silo, but also on Ensilage Cutter, Carrier and Power to run same. We however believe a personal interview would be far more satisfactory, and if you can not find it convenient to stop in and see us we will be glad to have our representative call upon you, provided you are not too far away.

SPECIAL, SILO CATALOGUE SENT FREE UPON APPLICATION.

Swiss Feed Cutters and Splitters.

The blades are set close together so as to split, crush and cut corn stalks, ears of corn and all coarse material into small particles. The blades operate at right angles with the cutting knives, and are arranged in curved lines from the main shaft. By this device the blades precede each other and operate easily. For cutting hay, straw, etc., the splitter bars are not required, and are easily detached by removing two bolts from each other.

LEVER CUTTER.

This Iron Handle Lever Cutter is so simple and easy to work as to commend it to everybody who has but a moderate amount of stock to feed. The knife is easy to adjust, grind and keep in repair. Changeable length of cut.

No. 2, with Curved Knife, \$4 25 net.

PHARMACY CUTTER.

For Cutting and Screening to any Desired Size.
Roots, Herbs, Leaves, Barks, Spices, &c.

The Machine has four 16-inch knives. The material cut off is carried over a perforated plate, and what is fine enough falls through the perforations, the balance is returned to the front and recut until sufficiently fine. The cut stock is collected in a box under the plate. The knives are straight and thus easy to sharpen, and are placed at an angle against the bed-plate of the cutter, which forms a cutting edge against which the knives work, thus having a perfect shearing action on the material.

The perforated plates are easy removable and the holes in them being made of any desired size, the change from one grade of fineness to another can be made in a moment, by simply changing the plates. The fineness depends only on the size of the holes in the plates and it is just as easy to make the material 1/4 inch long as to make it 1/2 inch.

Each machine is furnished with two plates of any desired bore, and extra plates are made to order on short notice.

The power to run one of these cutters is only one horse or less, depending on the nature of the material operated upon.

Price.....\$75 00

REEVES' ROOT CUTTER.

It is strong and durable, very simple in its construction and very rapid. The hooked teeth, in revolving, pass between stationary knives and catch hold and tear the roots, etc., into small pieces.

Net.
No. 1, for Hand... \$7 50
" 2, for Power... 15 00

Reeves' Rapid Vegetable Cutter

Has three cutting knives on the fly wheel, follow closely after small projecting, slicing or slitting knives, which cut at right angles to the edge of the cutting knives, thus reducing the material to a very nice condition for feeding.

The hopper bottom is of slanting cast grating, which allows dirt, gravel or foreign matter to fall through and thus be kept separate from the cut feed.

Net price for Hand Cutter.....\$14.00
" " " Hand and Power Cutter 15.50

The prices on all machines and tools in this catalogue are net; 5 per cent. will be allowed for cash with order.

Reeves' Portable All-Steel Adjustable Fencing

For Parks, Cemeteries, Gentlemen's Estates,
City Plots and General Purposes,

Is adjustable to Hilly or Level Ground. Lateral Bars are always parallel and Posts perpendicular; requires no digging of Post Holes; Sections are driven in the ground alongside of one another and bolted together. Each Section is 8 feet long and makes a 4-foot Fence when set.

The Posts are made of $1\frac{1}{2} \times 1\frac{1}{2} \times \frac{3}{16}$ -inch Angle Steel and the Lateral Bars are $1\frac{3}{8} \times \frac{7}{8} \times \frac{1}{8}$ Angle Steel. The Center Slat of $1\frac{1}{4} \times \frac{1}{8}$ Flat Steel.

The space between Bars is as follows: On Six-Bar Sections, $6\frac{7}{8}$ inches; on Five-Bar Sections, $9\frac{1}{4}$ inches; on Four-Bar Sections, 12 inches.

The Posts go in the ground 19 inches.

REEVES PORTABLE HURDLE FENCING

For Horses, Cows, Sheep, Pigs and General Use.

It is not only artistic, but serviceable and will outwear several woven wire fences, and is easily set, requiring no digging of post holes.

For inclosing and dividing lots or plots to suit any requirements on a gentleman's country seat or for farmers' use in general. No cheaper or more substantial fence can be made at the price; it is made of young chestnut timber.

Is constructed in sections, each section, or Hurdle, being 8 feet 3 inches long, having posts 6 feet long and making a fence 4 feet high when set.

We make them in three styles, four, five and six bar, all of which are of the same length and height, the difference being in the spacing of the bars.

They are easily put up. Two men can place from two to three hundred hurdles per day. They are set by making a hole in the ground with a crow bar and driving in the end posts.

The hurdles are locked together by wooden pegs, which are furnished with them. They are easily taken down and transferred from one plot to another, and during the winter months can be compactly stored.

ELECTRICALLY-WELDED WIRE FENCE.

It is made from thoroughly galvanized steel wire that is specially adapted to this use, all horizontal and vertical strands being firmly welded at their intersections, and every joint is guaranteed to be equally as strong as the wire. Mutual support is thus given to all wires, and any load or pressure which may be applied to the fence will be distributed over a number of its strands, thereby preventing excessive strain on any portion of it.

Having no sharp angles or projections, it cannot injure cattle or tear wool from sheep.

It can be easily erected on uneven or hilly ground, and when properly stapled to posts will not sag.

If desired, the fence can be taken down, rolled into a compact bale and erected in another place without displacing any of its wires.

We can furnish a large variety of meshes from wire of various sizes, also many styles composed of short and narrow meshes at the bottom and long and wide ones at the top, thus enabling purchasers to select a fence which will afford the desired protection at the least possible cost.

The accompanying cuts show a few of our standard styles, and if others are desired, we shall be pleased to quote on any specifications that may be submitted.

Showing the Electric-Welded Joint.

The top and bottom strands of Standard style are No. 9 and the intermediate No. 11 gauge wire.

Water Elevator and Purifier.

For Wells and Cisterns.
WHY WE SELL IT.

What the lungs are to the human body, the Water Elevator and Purifier is to any body of water over which it is placed. By forcing air into contact with the blood, the lungs eliminate the poison which is being constantly generated in that fluid. By forcing air into the stagnant depths of well or cistern the Elevator performs the same wholesome service, correcting the foul conditions, and carrying destruction to the nimble and deadly Microbes, and their more pretentious, but milder brethren, the Wiggle-tails.

PRICES.
Elevator complete, for 10 foot well....Net, \$9 00
All over 10 feet, extra..... 40

REEVES' TRIUMPH SOD CUTTER.

FOR ONE HORSE.

It is the best and cleanest sod-cutting machine in America. Has a *Reversible Knife* made of one piece of steel. While one side dulls, the opposite edge is getting sharpened, cannot get choked. An Adjustable Roller regulates the thickness of the sod from one-half inch to 2 inches in thickness; the front roller swings back under the guide-shoe and takes the weight when the machine is not cutting. The guide-shoe can be changed to either side in a minute; no friction or injury to the grass. The knife can be cleaned without turning over the machine. This new implement cuts the sod of uniform width and thickness, in any length, so that it is particularly adapted to giving solidity to slopes in cuts and on embankments, working equally well on level or uneven surface, cutting both ways with the land, and leaving no sod uncut, being light of draft, easily managed, strong, neat and durable. One machine will cut from 30,000 to 40,000 square feet per day, thus doing the work of forty men. We guarantee the expense saved between cutting by hand and with horse power in one day to pay the price of our machine.

Instructions for operating furnished with every machine. Every cutter warranted.

KNAPSACK SPRAYER.

For Vineyard, Nurseries and Potato Fields. Copper Tank Concaved to fit the Back. All Brass Pump. This machine consists of a copper tank holding five gallons, and a pump made entirely of brass, which cannot corrode or rust. There is a large air chamber placed inside the tank for convenience, which has sufficient capacity to keep up the pressure and continue to discharge the spray for one minute after the operator stops pumping. The Nozzle is our combination Vermorel so highly recommended, and gives universal satisfaction. The Vermorel attachment throws a fine misty vapor spray, but on account of its fineness cannot be thrown more than 15 feet. More force applied only serves to make the spray finer, but by means of the combination the Vermorel attachment can be unscrewed, leaving a solid stream nozzle, which will throw to a distance of 30 to 50 feet.

Weight, empty, 14 lbs.; full, 60 lbs.

Price: Complete as above, with Automatic Churn
Dasher Agitator, \$13.00 net.
Double Nozzle or Long Nozzle Extra, \$2.00 net.
Additional Hose at 10 cents per Foot.

PEERLESS CREAMERY.

The Peerless Creamery is more especially intended for water alone. The cans are oblong, 14 inches long, 5 inches wide and 14 inches deep, thus giving larger cooling surface. We have a large ice space in rear of, and also between the cans; in the No. 4 we have the space between the two middle cans, 7 inches; also, in all the other sizes we have a large space between second and third, fourth and fifth, and sixth and seventh. In these, as in the round can creamers, we use a straight faucet underneath, which is easily cleaned. The glass to observe the cream is in the nut and not in the can, so is easily repaired if accidentally broken.

In the No. 3 and larger-sized creameries, the faucet for drawing water from the tank is placed outside of creamery, as shown in illustration. Where ice is not used, we would suggest emptying tank of water about a half-hour after milk has been placed in cans, and refilling tank with cold water. This will save a few hours' time in the gathering of cream.

De Laval Cream Separators, Hand Sizes.

The purpose of the cream Separator is the quick and complete separation of cream from milk in the simplest and most profitable manner possible.

If used for the production of cream for any commercial purpose, no other system can be considered in comparison with the separator. Its product is the sweetest, freshest, most uniform, freest from taints, may be easily run of any desired consistency—from the lightest to the heaviest—and is superior in every respect. In all the larger cities, and in many smaller places as well, the best trade can now be satisfied with nothing but "separator" cream, and the price commanded is proportionately greater.

STAR MILK COOLER.

How It Works.—The water for cooling enters the machine through lower tube and fills the entire space between the sheets (see marked "Water") and discharges through top tube. As the water keeps constantly changing a complete circulation of the water is enforced. The warm milk runs from Milk Tank into top feed trough and through feed holes to outside of both cooling sheets and is cold

when it gets to the bottom, because, while the milk is running down outside the water is moving up inside.

If water is 54 degrees, milk will run off Cooler at 56 degrees. Milk is cooled to within two degrees of temperature of water.

The Stoddard Churn.

Awarded First Premium after thorough test at the largest exhibition of Dairy Apparatus ever made in this country, at Philadelphia, Sept. 6-25, 1880.

Is easily operated, easily cleaned, is made of white oak in the most thorough manner. It will last for years. The principle is *concussion*, and not friction; has no floats or paddles inside. It is especially adapted to the *granular system* of

making butter. The grain of the butter is perfectly preserved, which adds to its keeping qualities.

IXL Self-Gauging Butter Printer.

It is designed not only to print the butter, which it does very neatly and quickly, but also weighs or gauges it into pounds or ½-pounds, as desired, in one-quarter the time it can be done by hand. In these days of imitation and adulteration, we would advise every one making butter to have their monogram or initials cut on the butter print. This would prevent imitation. To a person making a uniform good article this would be of incalculable value.

Patent Butter Workers.

It is a machine that is very efficient in its work, simple in its construction, and convenient to handle. It will work a batch of butter in from three to five minutes, according to the condition of the butter, working out the butter-milk and thoroughly mixing in the salt, doing the work far quicker and better than it can be done by hand. It consists of a tray and a roller with paddles, which is turned by a crank, and traverses from end to end of tray. It acts on the butter on precisely the same principle as a ladle in the hands of a person, but with perfect uniformity.

The "Keystone" Fire Extinguisher.

Powerful, effective, simple, reliable.

Is the latest and most improved fire extinguisher on the market.

It is made of heavy cold rolled copper, highly polished and handsomely finished. The inside is thoroughly coated to prevent any corrosion. The seam is hand riveted—a much stronger construction than the so-called lapped or locked joints.

The cage which holds the acid bottle rests securely on a rim within the collar and can be instantly removed by the fingers.

The acid bottle is simply placed within the cage and when the cap is screwed on the extinguisher both bottle and stopple are held in proper adjustment by a small strong cage securely attached to the cap.

Is instantaneous in action, has perfect regulation of acid feed and when turned bottom up it throws a stream forty-five to fifty feet and stops playing when turned back. *It is entirely free from stop cocks, valves, tubes, hinges, springs and catches.*

Is tested to 350 pounds to the square inch by hydrostatic pressure.

Net price.....\$14.00

Finest Mixed Lawn Grass Seed.

REEVES' FINEST MIXED LAWN GRASS SEED produces lawns of great beauty and permanence, in as short a time as it is possible for them to be made.

This lawn mixture has brought us thousands of customers and is the result of over a half a century's experience in the seed line.

In making comparison with other lawn mixtures, kindly compare weight and quantity required per acre.

Price per bushel of twenty pounds, \$4.50; qt., 25c.; $\frac{1}{4}$ bu., \$1.25.

Three bushels required per acre.

Reeves' Central Park Lawn Mixture.

A very good mixture, 16 pounds to the bushel, at \$3.50 bu. Four bushels required per acre.

Reeves' Lawn Mixture for Shady Places.

Per peck, \$1.50. Per bushel, \$6.00.

Reeves' Golf Mixture for General Grounds

Twenty pounds to the bushel. \$3.25 bu.

Reeves' Putting Green Mixture.

Twenty pounds to the bushel. \$6.00 bu.

Grass Mixtures for Railroad Banks, Etc.

Twenty pounds to the bushel. \$4.50 bu.

We
Can
Furnish
Special
Mixtures
For
Any
Purpose.

PERMANENT MEADOW MIXTURES.

For good land not too dry and not too wet. Two bushels per acre, at \$2.90 bu. of twenty pounds.

For dry and high land. Two bushels per acre. \$3.35 bu. of twenty pounds.

On wet late land. Two bushels per acre. \$2.90 bu. of twenty pounds.

PERMANENT PASTURE MIXTURE.

On good ground, not too wet and not too dry. Two bushels per acre. \$3.50 bu. of twenty pounds.

On dry land. Two bushels per acre. \$3.75 bu. of twenty pounds.

On wet land. Two bushels per acre. \$3.35 bu. of twenty pounds.

SHEEP FESCUE

TIMOTHY

ENGLISH RYE GRASS

Leading Varieties of Grass Seeds.

OTHERS FURNISHED IF DESIRED.

- RHODE ISLAND BENT GRASS** (*Agrostis Canina*). A valuable grass for lawns. For lawns, sow three bushels to the acre; for pastures one to one and a half bushels. See "Formation of Lawns." Per qt., 25 cents; per bush. of 14 lbs., \$5.50.
- RED TOP GRASS** (*Agrostis Vulgaris*). A valuable native, permanent grass as a mixture in either meadows, pastures or lawns, growing in almost any soil, moist or dry, and standing well our hot climate. (14 lbs. to bush.) Per bush., \$1.25.
- FANCY HEAVY, RED TOP GRASS**, absolutely clean seed. Per lb., 23 cents.
- SWEET VERNAL GRASS** (*Anthoxanthum Odoratum*). For a mixture with pasture grasses it is valuable on account of its vernal growth, and also continuing to throw up root foliage until late in the autumn; for meadows, its chief merits are its fragrant odor, which the leaves emit when partially dried, thus sweetening hay; it is a vegetable condiment rather than a grass, of much nutritive value. Per lb., 20 cents.
- TRUE PERENNIAL SWEET VERNAL GRASS**. Per lb., 90 cents.
- ORCHARD GRASS** (*Dactylis Glomerata*). Is less exhausting to the soil than Timothy, and will endure considerable shade; it blossoms about the same time as Red Clover, making it on that account a desirable mixture with that plant; it is exceedingly palatable to stock of all kinds, and its powers of enduring the cropping of cattle commend it as one of the very best pasture grasses. (14 lbs. to bush.) Per bush., \$3.75.
- CANADA BLUE GRASS** (*Poa Compressa*). For poor soils. 14 pounds to the bushel, at \$2.50.
- SHEEP FESCUE** (*Festuca Ovina*). Short and compact growth. Valuable for lawns and sheep. 12 pounds to the bushel, \$3.25.
- MEADOW FESCUE, OR ENGLISH BLUE GRASS** (*Festuca Pratensis*). A highly valuable species for permanent grass land. It does not, however, attain to its full productive power till the second or third year, when it far exceeds most other sorts in quantity of its produce and nutritive matter. It is relished by live stock, both in hay and pasture, and is one of the most desirable permanent grasses for general culture. (26 lbs. to bush.) Per bush., \$8.00.
- ITALIAN RYE GRASS** (*Lolium Italicum*), is one of the most valuable grasses in Europe, being equally suited to all the climates. In England it is considered the best known grass to cut green for soiling, affording repeated large and nutritive crops; we recommend it here for use in pasture mixtures. (22 lbs. to bush.) Per bush., \$2.50.
- ENGLISH RYE GRASS** (*Lolium Perenne*), is the staple grass of Great Britain, entering largely into the composition of many of the richest meadows and pastures; its natural adaptation to almost all cultivated soils, and its early maturity, is the reason it has hitherto been so extensively cultivated in preference to many other equally nutritious sorts. (24 lbs. to bush.) Per bush., \$2.40.
- TIMOTHY** (*Phleum Pratense*). A grass so well known needs no description, except that for a hay crop on moist, peaty or clay soils, it will produce a larger crop than any other sort; it is not so well suited for light, sandy soils. (45 lbs. to bush.) Price variable.
- KENTUCKY BLUE GRASS** (*Poa Pratensis*), fancy triple clean—also known as **GREEN GRASS**, **JUNE GRASS**, etc., thrives on a variety of soils, but does best in dry and somewhat shady locations. It requires several years to become well established in the ground as a pasture grass. Very valuable for our Southern States, as it will stand the hottest summers. (14 lbs. to bush.) Per bush., \$3.15.
- WOOD MEADOW GRASS** (*Poa Nemoralis*), grows well under trees. 14 pounds to the bushel, at \$9.00.

MILLETS.

PEARL MILLET (*Pennisetum Glaberrimum*). This splendid forage plant is becoming yearly more popular as its value becomes more widely known. It is a tender annual, and must not be planted until the weather has become *settled warm*. Wherever corn flourishes, it will yield bountiful crops of fodder, which cows, horses and other farm stock are exceedingly fond of. It is equal in nutritive value to corn fodder, while its yield is many times greater. Sow at the time of sowing corn (and not earlier), in drills three to four feet apart, and when well up, the plants should be trimmed out to one foot apart in the rows. Sown in this way, five or six pounds of the seed will plant an acre. Price, per lb., 15 cents. \$11.00 hundred.

HUNGARIAN GRASS (*Setaria Germanica*). A splendid forage crop for light land. On rich land two crops may be grown the same season. Withstands drought and yields abundantly; height, 2 to 3 feet. (48 lbs. to bush.) Per bush., \$1.80.

GOLDEN, OR GERMAN MILLET. A heavier cropper than the Hungarian, and needs a longer season and a stiffer soil; stands up well, is easily cured, makes a coarse, harsh hay which is greedily eaten by all kinds of stock. Per bush., \$1.80.

MISCELLANEOUS.

Velvet Bean, \$5.25 bush.	Sorghum, Amber Sugar Cane, 16c. lb.; \$10.00 hundred.
Soja Beans, \$4.75 bush.	White Kaffir Corn, 15c. lb.; \$8.00 hundred.
Cotton, Upland, 12c. lb.; \$11.00 hundred.	Sun Flower, Large Russian, 10c. lb.
Cotton, Sea Island, 15c. lb.; \$13.00 hundred.	Vetches, Spring and Winter, 11c. lb.; \$9.00 hundred pounds.
Cow Peas, Black Eye, \$4.00 bu.	
Cow Peas, Whippoorwill, \$4.00 bu.	
Canada Field Peas, \$2.00 bush.	

GRAFTING WAX.

Per ½ pound.....15 cents | Per pound.....25 cents

Insecticides and Remedies for Diseased Plants.

ARSENATE OF LEAD.

Is more sticky in character than any other insecticide; for this reason is sometimes used where it is desirable that the poison should remain longer on the foliage. It is particularly good for extremely delicate foliage, as it will not burn. Used in proportion of two to three pounds of lead to fifty gallons of water, or two to four pounds of lead to one hundred gallons of water. For Codling Moth, Bud Moth, Canker Worm, Rose Bugs, Cherry Bugs, Tossock Moth, Elm Leaf Beetle, Curculio and small chewing insects, in general.

Price per pound, 20c.; 5 pounds, 95c.; 10 pounds, \$1.80; 25 pounds, \$4.00; 100 pounds, \$14.00.

BUG DEATH.

Non-poisonous, for Cabbage and Tomato Worms, Potato and Cucumber Bugs.

Per pound, 15c.; 3 pounds, 35c.; 5 pounds, 50c.; 12½ pounds, \$1.00; 100 pounds, \$7.50.

BORDEAUX MIXTURE.

Prevents blight, rot, mildew, specks and spots; increases crop yield 15 to 25 per cent. Fruits and Vegetables sprayed with it sell for much higher prices. Use by adding forty-nine gallons of water to one gallon of mixture.

Price per quart, 40c.; per gallon, \$1.00; 5 gallons, \$4.50. Fungous Diseases.

DRY BORDEAUX MIXTURE.

Liquid can be made from same in about ten minutes by adding 50 gallons of water to 10 pounds of Mixture.

One pound box, per pound, 20c.; 5 pound box, per pound, 20c.; 50 pound keg, per pound, 18c.; 100 pound keg, per pound, 17c.

FIR TREE OIL.

For Thrip, Red Spider, Ants, Brown and White Scale, Wood Lice, Grub Worms. For Green-house and House Plants. One-half pint to ten gallons of water.

Price, ½ pint, 40c.; pint, 75c.; quart, \$1.25; gallon, \$4.00.

HELLEBORE—Powdered.

Destroys Currant Worms, Rose Bugs, Cut Worms, Cabbage Worms, Slugs, etc. May be applied dry or mixed. One ounce to three gallons of water.

Per pound, 20c.; 5 pounds, 90c.; 10 pounds, \$1.75; 25 pounds and over, 16c. per pound.

KEROSENE EMULSION.

For Lice on Trees and Plants, Melon Louse, Pea Louse, Squash Bug, Elm Tree Beetle, San José and other Scales. Dilute 25 to 50 parts.

Per quart, 40c.; gallon, \$1.00; 5 gallons, \$4.50.

LIME, SULPHUR AND SALT MIXTURE.

For San José Scale, better than Whale Oil Soap, Kerosene Emulsion or Crude Oil. One gallon makes from 20 to 40 gallons of Spraying Solution by adding water.

Per quart, 40c.; gallon, \$1.25.

PARIS GREEN.

For all Chewing Insects, Potato Bug, Elm Tree Beetle, Codling Moth, Caterpillars, Cotton Worms, etc., etc.

Per ½ pound, 25c.; pound, 40c.; 5 pounds, \$1.85; 25 pounds, \$8.50.

SLUG SHOT—Powdered.

Non poisonous. For Potato Bugs, Beetles, Green and Black Flies, Slug Worms, Caterpillars, etc. 5 pound package, 30c.; 10 pounds, 50c.; 125-pound keg, \$5.00; 235-pound keg, \$9.00.

SCALECIDE.

For San José Scale, one gallon to twenty gallons of water.

Price per gallon, \$1.00; 5 gallons, \$3.25; 10 gallons, \$6.00; 50 gallons, \$25.00.

SULPHUR—Powdered.

For protection against Mildew on Grapes, Roses, etc.

Per pound, 10c.; 10 pounds, 60c.; 25 pounds and over, 5c. per pound.

TOBACCO DUST.

For Rose Lice, Cabbage and Tulip Leaves. An excellent fertilizer and keeps insects from roots of plants.

Price per 100 pounds, \$2.50.

TOBACCO STEMS FOR FUMIGATING.

Destroys Green and Black Aphis.

Price per 100 pound bale, \$1.50; 400 pounds, \$4.25.

WHALE OIL SOAP.

Destroys Lice on House Plants, Mealy Bugs, Scale on Palms, San José Scale. Rate of four pounds to one gallon of water.

Per pound, 15c.; 5 pounds, 50c.; 10 pounds, 90c.

WEED KILLER.

Effectively destroys roots as well as the top growth, and single application lasts almost an entire season. One gallon to 49 gallons of water.

Per gallon, \$1.00; 5 gallons, \$4.50; 25 gallons, \$20.00; 50 gallons, \$37.00.

FERTILIZERS.

PHOSPHO-PERUVIAN GUANO

THE BEST AND CHEAPEST FERTILIZER IN USE
