FARM PRODUCTION, FARM DISPOSITION, AND VALUE
OF CERTAIN FRUIT AND NUT CROPS 1937 - 1939

Peaches - Pears - Grapes
Cherries - Plums - Prunes
Pecans - Cranberries
and
Miscellaneous Fruits and Nuts

BY STATES

Washington, D. C.
May 1940

FOREWORD

The estimates of production for the crops shown herein are those which have been previously published by the Crop Reporting Board (except cranberries, for which see table on page 18). The latest 1939 production estimates for peaches in the 10 early Southern States, and cherries in California, were released in May 1940. All other 1939 production estimates (except cranberries) were published in the December 1939 General Crop Report.

Disposition estimates were based largely on records of rail, boat, and truck shipments, and on annual surveys of growers, dealers, processors, and cooperative marketing organizations.

The season average prices for the 1937 and 1938 crops, in most States, were based on estimated prices as of the 15th of each month, weighted by the estimated quantity sold in each month of the crop marketing season. These indications were supplemented with all available check data from growers, processors, and handlers on prices received for various uses, such as for canning, drying, etc. The preliminary prices for the 1939 season were derived in a similar manner, except that mid-month prices, monthly marketings, and final check data on prices received for various uses, are not yet complete for most crops for the entire season.

The value of sales represents the quantity of the crop sold multiplied by the season-average price. This should not be confused with calendar year cash income, which relates to the calendar year, irrespective of the year of production. Similarly, the value of quantities consumed in the farm household was obtained by multiplying the quantity so used by the season average price. To obtain the value of production, the season average price was applied to the total production. Where total production includes some quantities not harvested on account of market conditions, these quantities were excluded in computing value.

Estimates of disposition and value for apples and citrus fruits are not yet available.

1/ Value of "all pecans" differs slightly from sum of "improved" and "seedling" types, due to rounding of prices of "all pecans".

2/ Budded, grafted, or topworked varieties.

3/ Less than one thousand dollars.

The crop marketing season is Oct. 1 to Sept. 30. The values shown are for the marketing season or crop year, and should not be confused with calendar year income.
