Leaves beautifully variegated creamy white, with irregular margins and
 green centers. Flowers single, 3 to 4 inches across. Satinly lavender color.
 Produced in greatest profusion from July until autumn. This plant is almost un-
 known and is one of remarkably striking beauty. Doz. 100 1000

Althea, Seedlings, all colors, 10 to 15 inches 75 5 00

Berberry—Purple leaved, 2 years, fine 50 3 00

Berberry, Seiboldii—2 to 3 feet, transplanted 1 00

Berberry, Thunbergii—8 to 12 inches, transplanted 50 3 00 22 50

Berberry, Thunbergii—5 to 7 inches 2 00 15 00

"There are few, if any, perfectly hardy shrubs of so much value for outdoor
 ornamentation as Berberis Thunbergii. When planted so as to form a hedge it
 remains all summer neat, compact and yet luxuriant. Later, when the rigors
 of winter strip almost everything else of its beauty Berberis Thunbergii seems
 only to shed its leaves in order to give full display to the many clusters of
 beautiful red berries with which it is adorned. This plant not only looks well
 in hedge form, but in groups it is exceedingly effective." Doz. 100 1000

Euonymus American—3 to 5 feet 1 00 6 00

Euonymus American—1 to 2 feet 50 3 00

Elm Cork—A beautiful tree of pyramidal habit, 1 to 2 feet.... 50 3 00

ANCHUSA "DROPMORE VARIETY."

Here we have one of the very choicest hardy border plants, "The Heavenly-Blue Flower," as it has been aptly called. Its flowers are a **pure blue** in color, like the lovely Gentian. It is very hardy, growing from 4 to 6 feet high. It is fully covered with pure blue flowers an inch in diameter, which, in the evening, is of surpassing beauty and loveliness. It flowers in May, continuing about two months in bloom. We offer strong blooming plants, 25c each; \$2.50 dozen.

	Doz.	100	1000

Gladioli , mixed, an extra selection, all classes		1 50	
Gladiolus , Alice Carey. This we believe to be the best commercial white in cultivation today, a far better white than Augusta, limited stock	1 00	6 00	

AMERICAN EVERBLOOMING HYDRANGEA.

Botanically, *Hydrangea Arborescens Sterilis*.

This is believed to be the most beautiful hardy flowering shrub introduced during the last twenty years. It was found growing wild on the rocky hills of Western Pennsylvania several years ago. The old and well-known *Hydrangea Paniculata Grandiflora*, which, up to the introduction of the new form, has been one of the most popular flowering shrubs, blooms only in this latitude during August, while the new sort blooms continuously from early June until the end of the growing season. The size of the flower is one of the striking features of this shrub. Blooms twelve inches across are frequent in young plants while the average size on mature plants is usually six inches or more. The color of the flower is a pure, dazzling white, without the creamy, and later pink, tints of the old *H. Paniculata Grandiflora*. The length of time this whiteness is retained depends somewhat on local conditions, but usually from four to five weeks, when the flowers begin to change gradually to a light green color, and by October the flowers and foliage are of a similar shade of green.

The flowers, when cut, possess remarkable keeping qualities, remaining in good form and color many days. This feature renders it specially valuable for florists' use.

The Hydrangea is also one of the very best shrubs for forcing under glass, equal to any other used for that purpose; easily brought into bloom for Easter sales, as well as for later events. Our 10 to 14-inch plants can be brought into bloom along with Geraniums and other bedding plants, when their large, showy blooms will attract general attention.

This Hydrangea gives every promise of becoming even more popular than the well-known *H. Paniculata Grandiflora*, as it lacks the coarseness and stiffness of that variety; it is refined in tone and effect, and with its abundant and handsome foliage it lends itself readily to landscape effects. It is a comely, handsome shrub at all times. It is at least as hardy as *H. Paniculata Grandiflora*.
