TRADE LIST

Fall, 1910

CUSTOMERS are requested to state the mode of conveyance by which they desire their trees forwarded. When no route is named, we forward to the best of our judgment, without liability for error or delay.

RESPONSIBILITY.—After goods are placed on board cars here, we assume no responsibility for their safe or prompt delivery, or any injury caused by delay in delivery by the transportation company.

ALL CLAIMS must be made upon receipt of goods.

TERMS CASH, on or before delivery to express or railroad agents, unless by special arrangement.

Two hundred and fifty, twenty-five or five of any one variety will be furnished at the thousand, hundred and ten rates, respectively, but single plants of one or more varieties will not be sold at less than 15 cents each except Vines and Herbaceous Plants, the minimum price of which will be 10 cents each.

PACKING CHARGED EXTRA, but only sufficient to cover cost of time and material consumed in the work.

POST OFFICE ORDERS payable at Dresher P. O., Montgomery Co., Pa.

POSTAL TELEGRAPH OFFICE, DRESHER, PA. WESTERN UNION, AMBLER, PA. Use Nurserymen's Telegraphic Code or "A. B. C." Code, 4th Edition.

VISITORS are always welcome and should take train at the Reading Terminal, 12th and Market Streets, Philadelphia, for **Camp Hill Station**, or at Broad Street Station, Pennsylvania R. R., for **Fort Hill Station**. Be sure that the train you take stops at these stations.

NOTICE.—It is necessary that you should **TELEPHONE** us (Bell Phone, 226 Ambler; Keystone Phone, Jenkintown 652-Y), in advance of your coming, so that we can send a carriage to the station for you. Our office is 2 ½ miles from either station.

CERTIFICATE OF INSPECTION

Our nurseries are inspected several times each year, by inspectors of the Entomological Division of the Department of Agriculture of the State of Pennsylvania, and are free from insect pests and diseases. A certificate of the Department is attached to all shipments, and will also be furnished to customers if desired.

Deciduous Trees

Several years ago we realized that there would shortly be a demand for a better grade of shade trees than were being commonly sold in nurseries at that time. With this idea in mind we commenced transplanting large blocks of all varieties, selecting only nice, straight, first-class trees for the purpose, discarding any crooked or ill-shaped stock. Time has proven the wisdom of our foresight, and while the demand for this class of stock has been greater than our expectation, our supply has been sufficient to meet the demand, and though our sales last year on these trees were very heavy we still have a good supply on hand for this season's sales.

Our object is to grow a first-class tree, well rooted, with straight trunk and a nice top and we spare no expense to produce a tree of this character. All crooked trees are discarded. Every tree we send out is a good tree. We stake all of our trees with long bamboo poles and in that way we get not only a perfectly straight trunk, but a stem right to the top of the tree. This should be kept in mind when comparing our prices with the "cheap" trees usually offered.

Notice.—When ordering trees, be sure to specify both the height and caliper, as shown in the catalogue. It will be noticed that in many instances trees of the same height are of different calliper and in others they are the same calliper but different height.

2 1/2 to 2 3/4 in. cal., specimen.....	25 00	
2 3/4 to 3 in. cal., specimen.....	30 00	

We take a great deal of pride in our Norway Maples. We believe there are no finer trees in the country. All trees quoted have been once or more transplanted within the last three years. All crooked trees were discarded when the stock was transplanted, and every tree we send out has a good straight trunk with good heads and an abundance of fibrous roots. The "specimen" trees have been growing five by five feet apart in the nursery rows, giving ample opportunity to develop good well shaped heads.

" platanoides Reitenbachi, Purple-leaved Norway Maple

1 1/2 to 1 3/4 in. cal.....	13 50	
1 3/4 to 2 in. cal.....	15 00	
2 to 2 1/4 in. cal.....	17 50	

The Reitenbach Maple is a purple-leaved variety. The color is not as strong when the leaves first come out in the spring, but it develops later and retains the color better than the Schwedlerii during the summer months.

" platanoides Schwedlerii, Purple-leaved Norway Maple

1 1/4 to 1 1/2 in. cal.....	8 50	85 00
1 1/2 to 1 3/4 in. cal.....	10 00	100 00
1 3/4 to 2 in. cal.....	15 00	150 00
2 to 2 1/4 in. cal.....	20 00	

Both the Reitenbach and Schwedler Maples were transplanted three years ago. They are selected trees with perfectly straight trunks and good tops.

" platanoides globosa, globe-headed Norway Maple

4 to 5 ft., 2 to 3 ft., stems.....	7 50

Japanese Maples

We have a large stock of Japanese Maples, all of our own propagation. Plants imported from Japan are crooked, ill-shaped and poorly rooted. Our plants have straight stems and good bushy, healthy tops. You will find they are well worth the difference in price. We grow some of nearly all of the varieties in pots, as they transplant much more readily in this way than from the open ground. The ball is preserved by knocking them from the clay pots and sewing the ball in burlap.

" *Acer Japonicum*, Green-leaved

<p>The value of the Cedrela as a shade tree, particularly for planting along streets, is not well recognized, though it is one of the best shade trees for this purpose. It is perfectly hardy in Philadelphia and the lower New England States. We have never known it to be attacked by insects or caterpillars. In cities where the streets are narrow and under the most adverse conditions, it thrives equally as well as the Ailanthus and its flowers are entirely free from that disagreeable odor.</p>

All of these varieties of Linden have been transplanted within the last two years. They have perfectly straight trunks and nice heads and as they have single stems right to the top of the tree, they can be trimmed higher if necessary. The dasystyla is an excellent variety for street planting, the leaves are leathery and tough and are never attacked by insects. They remain green until a hard frost, then they all fall at one time.

Deciduous Shrubs

We continually try to impress upon our customers the fact that the mere height of a shrub does not indicate its value, but that its "bushiness" must also be taken into consideration. Shrubs grown closely in nursery rows must necessarily make height but the "bushiness" is sacrificed. A good, bushy, two to three-foot shrub is worth as much as a "slim" three to four-foot plant and for results it is worth more.

We grow our shrubs in wide rows and allow plenty of space between the plants in the rows to permit them to develop properly. It costs more to grow shrubs this way than where they are grown closely together, as we cannot plant as many on an acre. In comparing our prices with those of other growers, this fact should be given consideration.

"Heavy" shrubs indicate those which have been given extra room in the nursery rows.

HIBISCUS MEEHANI VARIEGATA

New Single Flowered Variegated Leaved Althaea.

This new variety of *Althaea* has proven very attractive since we first offered it two years ago. The leaves are variegated with green and white just the same as the old double flowered sorts, but its great beauty lies in the fact that the flowers, those single, open wide, being no less than four inches in diameter, while the flowers of the old double sort do not open at all. The color is a lilac pink. For prices see list of Hibiscus.

The several grades of California Privet offered as “transplanted, bushy” are very fine plants. They have been actually transplanted in the nursery, they are nice bushy plants and heavily rooted. For planting for a hedge for immediate effect this transplanted stock will give quicker results than the regular nursery grades.

Rhododendron punctatum, Early flowering Rhododendron

15 to 18 in., bushy, with ball..... 7 50 65 00

These are good bushy clumps, acclimated and transplanted last spring.

Evergreens

We feel that we cannot say too much of our evergreens. We give particular care and attention to their culture, transplanting them as frequently as may be necessary in order to secure an abundance of fibrous roots. To this end they are transplanted every two years, and frequently sheared so that they have a good compact and shapely appearance.

All evergreens are dug with ball of earth and the ball sewed in burlap, the cost of which is included in the prices shown in the catalogue.

Retinisporas

We have probably the largest and finest stock of Retinisporas, in all sizes, in the country. Plants from 1 foot to 11 feet. All sheared in good compact form and many times transplanted. Every plant is dug with a large ball of earth and the ball sewed in burlap. Even our smallest plants can be termed "a specimen plant." Considering the quality of our stock, the prices quoted are more than reasonable.

Vines and Climbers

Our vines are all transplanted plants. We handle them just as we do shrubs, grow them for one year, then transplant them into regular nursery rows, give them plenty of room so that we may get a good bushy well-rooted plant.

Particular attention should be given to the pot grown vines which we offer, they are good bushy plants, grown one summer in five-inch pots or larger as may be required. Many planters prefer pot grown plants for setting out in the Fall, as they are less liable to "heave out" with the frost than field grown stock, and besides this these plants will produce a stronger and more vigorous growth next Summer than the field grown stock.

When shipping these plants we knock them out of the clay pots in which they are grown and put them in paper pots. In this way the plants are delivered to customer with the ball unbroken.

HARDY HERBACEOUS PERENNIALS, ORNAMENTAL GRASSES AND FERNS

Here is a splendid assortment of the very choicest hardy perennials for hardy gardens, borders and formal gardens.

Not small, weak, microscopic specimens, but strong, well rooted plants, capable of producing good, quick results.

"Results the first season" is our aim always, and the general satisfaction our stock is giving is conclusive proof of its superiority.

July to September, etc., indicates the period of flowering.

MEEHANS' MALLOW MARVELS

Few new plants introduced in recent years have created as great a sensation as Meehans' Mallow Marvels.

It is the ambition of all horticulturalists to produce something that excels, something larger and better than has been grown before, but it can only be accomplished by those who have a great amount of patience, as the process is slow and more frequently ends in disappointment rather than success.

Several years ago, the late Thomas Meehan suggested the possibility of hybridizing the southern crimson-flowered mallow, which is not hardy in the North, with the white-flowered swamp mallow so common in New Jersey, and his suggestion was followed out.

Out of the first lot of seedlings produced by this cross-breeding, one seedling bore a dazzling brilliant scarlet flower. The plant was left out all winter without protection and the original plant is still growing in the nursery.

The flowers of this one plant were again hybridized as before, and again the seedlings from this plant produced a number of seedlings with various colored flowers. The best of these were saved and recrossed. This process was continued from year to year for some five or six years until a permanent strain of plants, some with crimson, some with red, and some with pink flowers, was produced. The beauty of these flowers can scarcely be described and even the colored plate fails to properly show their great beauty. Single plants set out on the lawn, in the garden, or among shrubbery beds, will create wide attention, but the greatest sensation is made when a number of plants of mixed colors are set in a bed by themselves.

Plants have been sent to various sections of the country and their hardiness fully proven. From Maine to California, from Canada to the far South. They thrive in every section.

They will grow and bloom in any soil, but do best in a rich, moist soil. They like plenty of water, but they should not be planted in a swamp where the water lies around the roots.

Flowers produced on plants which are in the most thrifty condition will measure twelve inches in diameter. They commence to bloom about the first of August and continue with a succession of flowers until frost.

The plants are of herbaceous character, dying to the ground every fall, but sprouting up again the following spring, stronger than ever. In rich soil, with plenty of moisture, a three-year-old plant will produce stems six to eight feet in height in one year.

MEEHANS' MALLOW MARVELS MOST BRILLIANT NEW PRODUCTION OF SCIENTIFIC PLANT BREEDING

Immense flowers from eight to ten inches in diameter, in fiery crimson, rich blood-red and soft shell-pink. Their great beauty is indescribable. Meehans' Mallow Marvels surpass all other perennials in profuseness of bloom, flowering propensities and brilliancy of color. From late July until October frosts arrive, the flowers continue to appear in profusion. Absolutely hardy, the Mallow Marvels have been tested, and are thriving in Canada and in the mountain portions of the northern states as successfully as in Georgia and Florida. Of herbaceous character, they come up year after year under varied conditions.
